Interstate Effort Loses Key Foe In New England

By MICHAEL WEINSTEIN

NEW YORK — Nationwide banking moved forward in New England on Wednesday, as a major bank in the region dropped its long-standing opposition to full interstate banking.

Bank of New England Corp., which has major operations in Massachusetts and Connecticut, said it would no longer oppose nationwide banking in those states – thus creating a more unified front in support of dismantling the New England regional compact.

Shawmut National Corp., one of Bank of New England's principal competitors, earlier endorsed nationwide banking, and the battle over interstate banking in Connecticut has been characterized as a tug of war between the chairmen of the Bank of New England and Shawmut, Walter J. Connolly Jr. and Joel B. Alvord.

Bank of Boston Corp., the largest banking company in Massachusetts, has said it supports nationwide banking on the condition that bank taxes are lowered.

The decision came as the Massachusetts General Assembly is considering a nationwide banking bill. The Senate Ways and Means Committee on Wednesday passed a bill that would open the state to acquisition by banks from around the country, beginning Jan. 1, 1991. The bill still faces deliberations before the full Senate and the House.

Massachusetts now allows interstate banking among the six New England states. In the past, similar bills have stalled in the state legislature.

Connecticut, too, only allows interstate banking among the six New England states. Since several major banking companies have operations in both

Fed Data Confirm Real Estate Glut Across the Nation

By ROBERT TRIGAUX

WASHINGTON — The Federal Reserve's latest survey of the economy provided fresh signals of real estate overcapacity and uncovered a new caution among bank lenders.

The report, called the "beige book," found that the pace of economic growth is slow to moderate in most Fed districts. It cited particular concern about high vacancy rates in some commercial real estate markets and found some tightening of credit standards.

In Atlanta and throughout the Southeast, the Fed said, real estate and auto loans remain weak. "Loan quality seems to be improving as banks establish tighter loan standards, particularly for real estate development," the survey found.

The report summarizes regional economic activity data obtained prior to Oct. 20. The beige book is prepared eight times a year for use at the Federal Open Market Committee, the Fed's monetary policymaking group, which meets next on Nov. 14. Fed watchers expect the Fed to gradually ease interest rates in light of the slower economic growth.

"There's no doubt that commercial real estate will still be soft in 1990," said Joseph A. Wahed, senior vice president and chief economist for Wells Fargo Bank, San Francisco – a major real estate lender. "Vacancy rates are still high – between 15% and 25% – and are especially high in suburbs."

Oil patch and Rocky Mountain regions, the Southwest, and a few pockets in the rest of the country have the most depressed commercial markets, he said in an interview.

"Next year, there is some new capacity coming on line and that is a problem

Bankers Making Deeper Cuts To Boost Sluggish Profits

By JEANNE DUGAN COOPER

NEW YORK — Bankers are cutting operating budgets for 1990 deeper than in any other year this decade, according to an informal *American Banker* survey of industry leaders.

Frustrated that profits and cost ratios have not improved more dramatically, bankers are clearly not stopping with the hundreds of branch closings and thousands of job cuts completed to date. They are more than eager to lop off any costs that are in any way not essential to their business goals.

Although many departmental budgets have already been whittled down, it seems a certainty that more jobs will be eliminated, more corporate real estate sold, data processing centers consolidated, and strategies refocused.

See BUDGETS: Page 6 ►

Money-Center Banks Lose Their Cost Advantage

Money-center banks have lost their cost advantage over the industry as a whole. In 1983, big banks enjoyed a 62-basis-point advantage in noninterest operating expense as a percentage of average assets. But increased costs at money-centers, combined with stabilized costs for the industry, reduced the spread to just 6 basis points in 1988.

Cost Controls Elude Money-Centers

By MICHAEL WEINSTEIN

NEW YORK — Bucking the banking industry's cost-cutting trend, money-center banks sharply increased their noninterest expenses in the third quarter.

Analysts attributed the increase to several factors, including one-time charges at some banks and strategic decisions by others to take advantage of an already abysmal earnings quarter to include expected future expenses.

Many of the banks reported heavy losses, largely the result of building reserves against Third World loans. Analysts said banks can "front load" a range of future costs, such as legal and advertising costs and employee bonuses.

As the banks were already reporting big losses, higher operating expenses in the third quarter were less likely to stand out. By including future costs in

Check Cashers May Get Rules On Laundering

By ROBERT M. GARSSON

WASHINGTON — Seeking to curb money laundering, Senate Banking Committee Chairman Donald W. Riegle said Wednesday he was considering legislation to regulate companies in the business of cashing checks and wiring funds.

Mr. Riegle, a Michigan Democrat, does not appear to have settled on a legislative strategy and he did not say whether a bill would include requirements to report transactions between such facilities and banks. He did say that licensing requirements would likely be a central focus of his bill.

"This is an emergency," Mr. Riegle said, suggesting that he plans to move quickly.

Meanwhile, Sen. John Kerry, D-Mass., who chaired Wednesday's Senate Banking subcommittee hearing on money laundering, said computer technology should help authorities monitor wire transfers more effectively.

Mr. Kerry also expressed frustration that the Treasury Department has not moved more quickly to monitor money flows through the nation's wire transfer systems, including the New York Clearing House's Chips.

"If in this age of information processing, we don't have the ability to demand a system of accountability, where on a daily basis we can know what is coming in, and can cross-check to see where patterns are developing, something is wrong," Mr. Kerry said.

Transactions Initiated Abroad

Mr. Kerry also said that new Treasury Department proposals to monitor wire transfers were deficient. "A gaping loophole in Treasury's proposal is that foreign banks have the capacity to get around the system," he said.

John F. Lee, president of the New York Clearing House, said his organization is at work on a format that would require wires to include information about the purpose of a payment.

But he said, "We have little capability to investigate or determine whether or not originators of payments truthfully supply such information."

Mr. Lee also told the panel that efforts to deny drug traffickers access to the system here could lead to the development of such systems abroad.

In stark contrast to the tone of similar hearings in past years, the banking industry was applauded for its compliance with cash reporting rules.

"As of 1989, we have virtually eliminated money laundering from the teller line," said Gerald D. Lewis, Florida's comptroller.

Mr. Lewis and a fellow state regulator, Timothy D. Mahoney, director of the New York Banking Department's special investigations division, told the panel that banks were not overly burdened by reporting requirements mandated in money-laundering laws.

But L. Don Sargent, president of American Commerce National Bank in Anaheim, Calif., said the rules represent "a crushing burden."

"Each form requires 18 to 26 minutes to complete for purposes of complying with Bank Secrecy Act regulations," he said. "This means that even small banks can spend hundreds of man-hours each year just to comply with one regulation."

Boris F. Melnikoff, senior vice president at First Atlanta Corp., said banks should receive rewards for tips about launderers that lead to fines or forfeitures. ■

Cardholders Would Forgo Perks for Lower Rates

By DONALD SHOULTZ
Seventh of a Series

Although a majority of American consumers recognize that their bank credit cards offer special benefits such as travel services and group insurance, most cardholders told the *American Banker* annual consumer survey that they have not made use of the enhancements.

The survey found that Americans value the extra benefits, which many banks have introduced in recent years to make their credit cards more appealing. But consumers would gladly forgo the frills in return for lower interest rates or annual fees.

Many cardholders said they would opt for a card with enhancements if the rates and fees stayed the same. However, a whopping 84% of those who have an enhanced bank card with higher rates or fees said they would prefer a card with no benefits and a lower interest rate or annual fee.

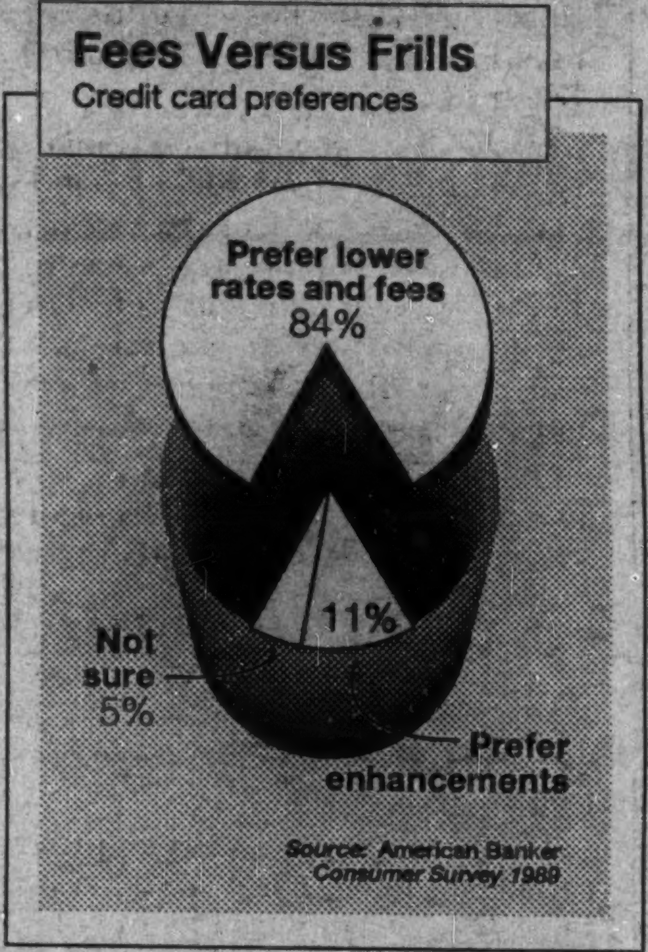
Only 11% found a card with enhancements more attractive than one that costs less.

The sixth annual survey involved extensive telephone interviews with a representative sample of 1,009 adults throughout the continental United States. The survey was administered in March and April by Trans Data Corp., a Wayne, Pa., research affiliate of the *American Banker*. A complete report and analysis of the findings has been published in a magazine and is being mailed to *American Banker* subscribers.

Bank card marketers and consultants are divided on how to interpret the findings on card enhancements.

"It's a truism in consumer research that when one asks, 'Is my price too high?' the answer is invariably yes," said Donald J. Auriemma, president of Auriemma Consulting Group in Garden City, N.Y. "The price is always too high."

Fees Versus Frills
Credit card preferences



Source: American Banker Consumer Survey 1989

Bankers say that the behavior of consumers may not conform to their stated opinions or attitudes. In the real world, price is not isolated and is only one factor in the decision to sign up for a credit card.

Others were not so quick to discount the questions that the survey raises about the effectiveness of credit card fringe benefits. They said the result might indicate a growing price sensitivity that card marketers should heed.

"I don't think it's a knee-jerk reaction," said Stephen Szekely, vice president of Payment Systems Inc., a research firm in Tampa, Fla. "I think it's probably a pretty accurate assessment of the way consumers feel and behave."

Mr. Szekely's research shows that a majority of consumers say they pick one card over another because of either rate or fee.

Credit card enhancements were introduced by card marketers to differentiate their maturing products in a crowded marketplace. But now the enhancements have become nearly universal, to the point where they have taken on the sameness of the cards they were supposed to differentiate.

"I wonder if we're really looking at something that's kind of waterlogged at this point," said Michael P. Sullivan, a bank marketing consultant based in Charlotte, N.C.

Of all the consumers polled for the 1989 *American Banker* consumer survey, 68% said they have a Visa card, a MasterCard, or both. Of that group, 68% said they have a bank card with enhancements.

Bankers and consultants are quick to point out that this result gauges consumer awareness, not market penetration. Since virtually all banks offer a package of enhancements, some consumers may no longer be paying attention.

When survey respondents were quizzed further on what benefits they had, the most frequently mentioned were card registration services, travel services, discounted life insurance, rebates on purchases, and frequent-flier points.

Like most frills added to core products, card enhancements seem to be wasted on the majority of cardholders. Most were not aware of the enhancements, did not value them, or did not use them.

When consumers who have enhanced cards were asked if they value the benefits, 41% said yes. Nearly two-thirds, or 64%, said they have not used any of the benefits available.

Among cardholders who have taken advantage of the enhancements, travel

Texas Commerce to Sell Card Processing Business

By YVETTE D. KANTROW

NEW YORK — Texas Commerce Bancshares Inc. is selling its credit card merchant business to National Data Corp., an Atlanta-based data processing company that has made several similar deals in recent months.

The price was not disclosed.

The Houston-based bank, a subsidiary of Chemical Banking Corp., joins a growing list of financial institutions that have decided to stop processing credit card transactions for retailers. It currently handles $500 million worth of credit card sales a year for 9,000 merchants.

Texas Commerce's New York affiliate, Chemical Bank, handed off its merchant processing to National Data in 1988.

National Data handles $6 billion in credit card payments a year and is the fifth-largest merchant processor in the country, according to a recent ranking by *The Nilson Report*, a newsletter published in Los Angeles. Texas Commerce said its deal with National Data represents a partnership rather than a decision to exit the merchant business. The bank will continue to accept merchant deposits.

National Data said in September that it signed agreements in principle to acquire five banks' merchant processing operations by yearend. Texas Commerce is the third to be disclosed, following Bank of New England, Boston, and First National Bank of Maryland, Baltimore. More announcements are expected soon and will likely involve one in the Rocky Mountain region and one in the Southeast. ■

Former First Fidelity Branch Manager Pleads Guilty in Laundering Case

By REBECCA COX

NEW YORK — A former branch manager of First Fidelity Bank, Newark, N.J., has admitted helping launder between $6.5 million and $11 million over a four-year period that ended in June 1985.

The former branch manager, Roberto Calleja, pleaded guilty Wednesday to violating federal currency and income tax laws, according to Samuel A. Alito Jr., U.S. attorney in Newark.

Money launderers and other criminals seek out branch managers in preference to tellers and other lower-level employees because managers can more easily conceal suspicious bank transactions, law enforcement experts said.

Mr. Calleja told Judge Harold A. Ackerman at the hearing in federal court in Newark that he laundered $40,000 to $70,000 a week during a 41-month period. The investigation into the case is continuing, according to Justice Department spokesman Dick Lavinthal in Newark.

The funds were given to him in small denominations by a man Mr. Calleja knew as Jose Fernandez. He exchanged the small bills for larger-valued notes without completing currency-transaction reports. The reports are required by law to be filed for each cash transaction over $10,000. Mr. Lavinthal would not comment on the source of the funds.

Mr. Calleja also admitted he helped a bank customer, Eugenio Gonzalez, engage in a tax-evasion scheme that disguised Mr. Gonzalez's ownership of certificates of deposit and money-market accounts at the bank. Mr. Lavinthal would not comment on whether Mr. Gonzalez has been charged with tax-evasion or other crimes. ■

Corrections

An Oct. 30 table ("Earnings at Top Southeast Banks," page 2) incorrectly stated the third-quarter 1988 earnings of Citizens and Southern Corp., Atlanta. The bank earned $53.3 million in last year's third quarter. The company's earnings in the third quarter of 1989 rose 15.2% from the third quarter of 1988.

□

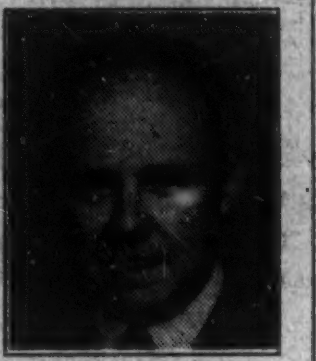
Western Bank, Los Angeles, was the 20th-largest commercial bank in mortgage servicing for investors at midyear, with a portfolio totaling $592.2 million. The bank was omitted from an Oct. 24 listing ("Top Banks in Mortgage Servicing," page 8).

□

General Motors Co. is expected within weeks to ask Banca Nazionale del Lavoro to make the first payment on a letter of credit totaling $150 million. The company was misidentified in an Oct. 31 headline (page 10). ■

Fitting Talent to Thrift Industry Needs

By DAVID de WILDE
Chief Executive Officer
Chartwell Partners, San Francisco



'Although industry consolidation is creating a surfeit of candidates seeking top management positions, owners are finding that few are qualified to lead their institutions into a profitable future.'

— David de Wilde
Chief Executive Officer
Chartwell Partners

THERE is no question that capital – at least $166 billion, by Bush administration estimates – will be needed to resuscitate the thrift industry. But capital alone won't assure success. To compete with other providers of financial services in the current overcrowded marketplace, new thrift owners must also meet a second critical need: executive talent.

Lack of quality management was one of the primary causes of the industry's distress in the first place. Many executives, accustomed to stability and security, were unprepared for the rigors of volatile interest rates, rapid technological change, and deregulation. And today, the depth of the resulting problems make it increasingly difficult to recruit the management needed to turn the industry around.

Although industry consolidation is creating a surfeit of candidates seeking top management positions, owners are finding that few are qualified to lead their institutions into a profitable future. For many institutions, the leadership search takes on added urgency because it is closely linked to the search for a new strategy. The margin for error is extremely small.

The already crowded market for financial services promises to get even more competitive as regulatory barriers fall and distinctions among depositories blur. While there is no absolute formula to ensure success, there are three critical steps that will give thrift owners a good head start.

Recruit According to Strategy

First, focus on fit. Determine your vision for the future. Then recruit leaders who share that vision and the experts who can deliver it.

For example, when the Robert M. Bass Group took control of American Savings bank in California last year, it was determined to build a thrift with a tightly focused strategy of building retail deposits and offering adjustable-rate single family home loans. For chief executive officer, they aggressively recruited Mario Antoci, a 20-year thrift industry veteran with a highly successful track record based on this "stick to the knitting" approach.

But not all owners will adopt the same strategies. Some will seek to originate consumer assets for sale into the secondary markets, while others will strive for asset diversification by moving into consumer and commercial lending – fields that demand credit and management skills more akin to traditional commercial banking. To the extent that the regulators permit, others will emphasize real estate investment.

The strategy should dictate the choice of management. That means the search should extend beyond the industry's current borders – to commercial banks, investment banks, mortgage banks, and elsewhere – wherever the expertise lies.

Wherever they come from, tomorrow's experts must be prepared to address changing industry needs. Ability to manage interest rate risk, for example, is of resurgent concern to regulators. This concern is not new. Several years ago, the strongest candidates for asset-liability managers came from investment banking firms, federal financial agencies, and commercial banks.

The Lobbyists

By Barbara A. Rehm

Lender Liability For Toxic Waste Galvanizes Groups

Forget credit unions and expanded powers, the Arizona and California banking trade groups are focusing their lobbying power on changing laws that hold lenders liable for toxic waste found on foreclosed properties.

"Toxic waste is our main legislative thrust," says **Gordon Murphy,** executive vice president and lobbyist for the **Arizona Bankers Association.** While not truly ditching the quest for parity with credit unions or expanded powers, both groups are leaving the bulk of that lobbying to their Washington reps.

California Bankers Association lobbyist **Gregory O. Wilhelm** said member banks are worried that when they end up owning a property through foreclosure, they are responsible for the property's toxic waste problems. Under current law, the bank cannot go after the former owners.

"All a lender can do is walk away from the whole thing," says Mr. Wilhelm.

The California group has published a white paper promoting reform of the laws governing toxic waste cleanup and has enlisted the help of state Sen. Art Torres. Mr. Wilhelm is hoping a new law can be enacted to allow lenders to sue the borrower or at least escape full liability if a property loan was made in good faith.

Mr. Wilhelm joined the group about a month ago, replacing **Larry Kurmel** who moved up to become executive director. Mr. Wilhelm formerly was a **Wells Fargo Bank** lobbyist.

— **Teresa Carson**

Credit Union Group Goes State to State with Pep Rally

About 300 credit union executives gathered in Los Angeles on Monday for the kickoff of Operation Grassroots, a nationwide effort by the **Credit Union National Association** to get members pumped up so they can defend their industry.

The **American Bankers Association** has vowed to convince Congress that credit unions should be subject to the same rules and taxation as banks. But the banks have been overwhelmed by credit union lobbying in the past, and they may be buried again if Operation Grassroots works.

★★★ OPERATION ★★★
GRASSROOTS
A CREDIT UNION SYSTEM CAMPAIGN

CUNA is being helped in host cities by state credit union trade groups.

Doug Duerr, a lobbyist for the **California Credit Union League,** says Operation Grassroots was a huge success in Los Angeles.

"It really helped to put our people on notice that there is a struggle and that in the coming months there is going to have to be a defined program that every person is going to have to play a role in," he says. "The program ran 45 minutes over, and the audience stayed. Nobody got up and left."

Wende C. Arnold, a vice president at the **Colorado Credit Union League,** reports that Operation Grassroots' second stop in Denver attracted about 100 people on Tuesday.

"People responded well," she says. "I could tell from the talk afterwards. People were saying, 'This sounds great, let's get involved.' "

The CUNA lobbyists hit Dallas on Wednesday and are in Chicago today. They will be in Atlanta on Nov. 8, Philadelphia Nov. 9, and Springfield, Mass., Nov. 10.

FDIC Research on Insurance Gives Ammo to Credit Unions

The **Federal Deposit Insurance Corp.** recently handed the credit union industry some dusty but powerful ammunition for its fight to repel attacks from bankers.

The FDIC research staff presented its 1988 credit union study to the agency's top lobbyist, **Beth L. Climo,** in September. But it leaked out and ended up making a great lobbying tool for the credit union industry. The FDIC report is generally a ringing endorsement of the credit union concept, particularly praising credit unions' customer service record. In addition, dissemination of the FDIC study torpedoed a separate study of credit unions done for the **American Bankers Association,** which the group had hoped would help lobbyists convince lawmakers that credit unions should adhere to the same laws and regulations as banks do.

William Donovan

The **National Association of Federal Credit Unions** is capitalizing on the situation. Association lobbyist **William J. Donovan** notes that the group excerpted the FDIC study in recent congressional testimony before a House Banking subcommittee. The group also put out a press release highlighting the FDIC's conclusions. ■

ABA Study Urges Banks to Adopt Image Processing

By JEANNE DUGAN COOPER

NEW YORK — Bankers who embrace image-processing technology are going to be ahead of the game in the next decade, according to a study commissioned by the American Bankers Association.

The study, a year in the making, marks the start of a drive by the industry's largest trade group to persuade its members to adopt the fledgling technology, in which paper documents are converted to electronic form for more efficient transmission and processing.

"Image processing is the first major opportunity for improvement in cost-efficiency and cost-effectiveness in handling of checks and paper since high-speed processing was introduced 15 to 20 years ago," said John Shain, president of Littlewood, Shain & Co., one of two consulting firms that conducted the study.

Mr. Shain's company worked with Andersen Consulting, a division of Arthur Andersen & Co., which serves banking and image-processing industry clients. The report is scheduled for publication at the end of this month.

The report will sell for $197. It will be followed up with two seminars in January, where bankers will pay $497 each to learn why and how to enter the world of image technology.

The ABA's overall message is simple: Bankers with the ability to capture, store, and electronically transmit images will have a competitive edge in the 1990s.

The main advantage of image processing is that it gives banks the ability to eliminate much of the paper involved in such high-volume processing operations as checks and lockbox payments. Some banks have already started using the technology in monthly ac-

Gray: Regan, 3 Senators Pushed Keating Cronies for Bank Board

By JIM McTAGUE

WASHINGTON — Edwin J. Gray, the nation's top thrift regulator from 1983 to 1987, charged Tuesday that three senators and former White House Chief of Staff Donald T. Regan joined forces in trying to pack the Federal Home Loan Bank Board with associates of Charles H. Keating Jr., whose collapsed thrift could cost the government up to $2 billion.

In explosive testimony before the House Banking Committee, Mr. Gray also alleged that Rep. Charles Pashayan Jr., R-Calif., "lobbied me hard in numerous telephone calls and in other communications" in 1985 to drop proposed restrictions on thrift real estate investments that would have hurt Mr. Keating's Lincoln Savings and Loan Association in Irvine, Calif.

"He received sizable contributions from Mr. Keating," Mr. Gray told the committee, which is investigating why M. Danny Wall, director of the Office of Thrift Supervision, allowed the S&L to remain open for a year while it lost billions of dollars. Mr. Gray was formerly chairman of the Bank Board, the

American Express, Pressed by Banks, Seeks New Image for Corporate Cards

By YVETTE D. KANTROW

NEW YORK — American Express Travel Related Services Co. will bestow a new look on its corporate card next year as it tries to thwart inroads by the banking industry into the business market.

The redesigned card, which will have the word "corporate" emblazoned across its front, will be easily distinguishable from its consumer counterpart, American Express executives said. The move comes at a time when MasterCard International and Visa U.S.A. are chipping away at a market that until a few years ago was virtually controlled by American Express.

"This change in design symbolizes the coming of age of the corporate card," said Roger Ballou, president of American Express Travel and Travel Management Services.

The revamped corporate card will sport the classic American Express centurion symbol and will be the same green color as the company's standard charge card. The centurion logo will be moved from its traditional place at the center to the upper left corner of the card. The centurion's location also was

Weak Assets Of 150 Thrifts Surprise FDIC

But Data May Not Indicate Trend, Agency Official Says

By RICHARD RINGER

CHICAGO — The Federal Deposit Insurance Corp. has discovered worse than expected asset quality in an examination of nearly 150 savings and loans, an agency official said on Tuesday.

But Paul Fritts, director of supervision for the FDIC, cautioned that it is too early to determine whether the preliminary findings on asset quality are widespread throughout the thrift industry. "We may not have been exposed to enough thrifts to say if this is a trend," said Mr. Fritts.

Among the thrifts that have come under scrutiny lately for asset quality, Mr. Fritts said, many of the assets that examiners identified as potential problems ended up as nonperforming or past due. He added that it would be premature to extrapolate those findings to the industry, because the thrifts the FDIC selected to examine first are institutions where the agency anticipated finding problems.

The thrifts examined so far by the FDIC, which Mr. Fritts did not identify, are spread throughout the country and are of varying asset size.

"The general quality of assets . . . does not seem to be good as we thought initially," Mr. Fritts told reporters during a news conference at the annual convention of the U.S. League of Savings Institutions here.

Most of the questionable assets are in the commercial real estate portfolios of the examined thrifts, said Mr. Fritts. "Those loans probably should not have

Technology Falls Short for Most CEOs, Study Says

By RICHARD LAYNE

NEW YORK — Less than half of chief executive officers believe that the millions they spend on technology actually support their companies' business plans, according to a survey by an international consulting firm.

Culture and organization, not technical problems, stand in the way of full exploitation of information technology, the study by United Research Co. of Morristown, N.J., found. The perceived hindrances were equally prevalent in banks and nonbanks surveyed.

"We perceive a tremendous focus on technology, but little on dealing with those cultural issues," said Thomas R. Madison, vice president at the research and consulting organization. To ignore the cultural issues, he added, is to invite trouble in the form of wasted resources and missed opportunities.

"Banks can expect limited return on the technology investment unless they deal with the cultural issues," he said.

The study showed that 40% of CEOs and 52% of chief information officers are unhappy with the contribution technology makes to business plans.

"Senior executives are frustrated," said Mr. Madison. "They've invested billions of dollars over the past 10 years and they don't see the return they expected." Technology budgets at large banks exceed $100 million.

The United Research study included a poll by Louis Harris & Associates of 100 CEOs and 202 chief information officers – often called CIOs – of the top 500 manufacturing and the top 500 service sector companies. Of the respondents, 36% were in banking or financial services.

Mr. Madison said that there was no statistical difference in the way banks and other corporations view technology.

The CEOs and CIOs cited five cultural barriers to improving the efficacy of information technology resources: A failure to change some of the basic ways of doing business, people's failure to take the time to learn and use the existing systems, a failure to train people properly, an organizational culture that resists change, and turf battles that impede change.

These issues may loom larger in the future, when banks will have to improve customer service to gain a competitive advantage. Three-quarters of the bankers interviewed believe they will be spending more money over the next five years on systems that directly touch upon consumers, particularly sales and marketing systems and other customer service applications.

While chief information officers share CEOs' beliefs that technology usually fails to support the business plan, technologists also point the finger at senior management.

"Most IS [information systems] executives feel that they are not nearly as involved in the business planning process as they should be," said Mr. Madison.

William Synnott, a consultant with Nolan, Norton & Co. in Lexington, Mass., and a former top information systems executive at Bank of Boston, distinguishes between a CIO's reacting to a business plan and helping to develop a plan.

Reacting alone does nothing to tap that executive's knowledge and ability to support the business, Mr. Synnott said. He recommends that a business plan be drawn up with input from a chief information officer – if a bank wants to use information technology effectively. ■

Has Technology Paid Off?

Executives were asked if they agreed with these statements:

	Chief executive officers	Chief information officers
Information resources support business plans	40%	52%
More business plans should be shared with systems executives	57%	61%
Business plans are formally aligned with information resources	68%	45%
System obsolescence is a competitive problem	70%	50%
Adequate return-on-investment measures are lacking	78%	94%
Poor systems design is barrier to corporate growth	51%	66%
System investments have improved overall performance	98%	94%
System investments have improved executives' ability	93%	91%
System investments have improved customer satisfaction	90%	91%

Responses based on a poll by Louis Harris & Associates of 100 CEOs and 202 chief information officers of the top 500 manufacturing and top 500 service sector companies in the United States.

Consumer Credit Nearly Stagnant, Fed Data Show

By ROBERT TRIGAUX

WASHINGTON — Consumer installment credit for the month of September rose a paltry $606 million to $703.6 billion, after rising $2.66 billion in August, the Federal Reserve said on Tuesday.

"These are both small numbers," Peter P. Kozel, senior vice president and chief economist at Shawmut National Bank in Boston, said of the monthly increases. "They used to be $5 billion and $10 billion," he said, and they reflect the shrinking of consumer spending in a slowing economy.

Federal funds crept down below 8¾% on Tuesday, reflecting what many economists see as both continued easing of monetary policy by the Fed and decreasing demand for credit. Fed funds traded at 8⅝% for much of Tuesday afternoon.

"We have just been trading at a little bit over 8¾, and we now may trade just over 8½" until the Fed can gauge economic trends, Mr. Kozel said.

One key sector, automobile credit, fell $842 million in September after rising a mere $7 million in August, the Fed reported. Economists said the figures reflect ongoing weakness in automobile sales, but they warned that October figures will be significantly worse.

Revolving credit rose $756 million in September, after a $3.37 billion gain in August. Mobile home credit declined in both months – by $91 million in September and $692 million in August.

Economists warned that the monthly consumer installment credit figures do not include credit granted in the form of home-equity loans – the fastest-growing sector of consumer credit. "It's becoming less of a useful statistic," Mr. Kozel said of the monthly figures. ■

FINANCIAL TECHNOLOGY UPDATE

A new item processing solution has significantly reduced labor costs for Liberty National Bank, Louisville, Kentucky. NCR's 7770-3000 Intelligent Multi-Pocket System, running a software application from Data Management Products of Omaha, Nebraska has eliminated 65 hours of return item processing labor. All 42 Liberty branches have been converted to centralized processing two months ahead of schedule.

The Financial TOWER System 2 (FTS 2) improves customer service while increasing the number of product offerings. Star Bank, a Cincinnati based financial institution, recently chose NCR's Financial TOWER System 2 for its new branch automation system. In addition to improved customer service and more product offerings, Star Bank wanted to increase productivity. They found that with their new NCR system in place, platform productivity grew in excess of the 20% they expected.

NCR introduces color CRTs for ATM use in August. 5070 Interior ATMs, 5084 Cash Dispensers and 5085 Extra-Function Terminals will all be capable of utilizing these new screens. A PC is installed to drive the EGA monitor which delivers vibrant colors. Standard graphics are provided or PC Paintbrush can be used to design new graphics or modify existing programs. Plus, the CRT's potential for "advertising" at the ATM site is impressive.

The ITX Windows Software System enables multiple host system jobs to be managed through one PC. As part of the new System 10000 software tool suite, ITX Windows allows users of NCR's Banker 80 II System to handle the after-hours work of up to 9 institutions in a multi-bank installation. In addition, loan officers can use the Loan Pricing system and review applicants' account records simultaneously. ITX Windows also supports software development with edit, graphics, view, and window creation capabilities.

For additional information on these new developments from NCR, phone 1-800-CALL NCR.

NCR

Tax Rule Eased On Bank Losses From LDC Debt

By JAMES R. KRAUS

NEW YORK — In an easing of policy, the Internal Revenue Service has ruled that, for tax purposes, banks can carry forward some losses related to Third World debt reduction over 15 years rather than the normal five years.

The ruling applies to losses suffered when banks exchange loans for bonds at a discount to face value or for securities at lower interest rates.

The ruling came in response to queries from banks on how to treat losses on Mexican loans exchanged for bonds under a debt restructuring agreement concluded in July.

Such debt-reduction bonds are a key element in the Mexican restructuring, considered the prototype of Treasury Secretary Nicholas Brady's plan to alleviate Third World debt.

Analysts said the ruling benefits banks by giving them 10 extra years to deduct losses from future rather than past taxable income. But they also said that it left several loose ends and did not respond to requests by banks to deduct foreign loan losses from domestic taxable income.

'Helpful,' but Not Enough

"The ruling provides significant guidance on the appropriate tax loss," said J. Richard Harvey Jr., a partner in the accounting firm of Price Waterhouse in New York. "However, there still are many tax issues surrounding the Mexico exchange that need clarification. The ruling is helpful but not an all-encompassing answer."

When banks incur losses by exchanging Third World loans for lower-value bonds, the IRS will allow them to deduct these losses from taxable income for three years backward and 15 years forward. For Third World loan losses caused by unilateral decisions by banks, the period for tax deductions remains 10 years back and five years forward.

The Mexican agreement gives banks the options of exchanging loans for bonds bearing the same interest at a 35% discount to face value or of exchanging the loans at face value for bonds at lower interest. A third option allows banks to provide new money.

'Pretty Good News'

The IRS ruling permits banks to decrease their taxable income by either the 35% discount on principal or the lost interest income. This is determined by comparison with with applicable federal rates, now about 8% for 30-year Treasury bonds.

"This should be pretty good news for banks, because most are going to realize losses and they'll be able to realize a tax deduction," said an international tax specialist at a large accounting firm who declined to be identified.

One accounting executive said the ruling was firmed up after a meeting of Treasury officials and senior bankers in Washington in mid-September.

"Most of the banks were in favor of the 3 carryback and 15 carryforward," said the executive. "Many banks don't have the ability to utilize a loss during a carryback period. I'm not aware of any bank that objected."

However, accountants noted that ruling does not grant banks any tax benefits for providing new money. The Mexican agreement assumed that banks would provide new money equal to 5% of the $52 billion in loans being restructured, they said. ■

LEGAL ALERT

By TOM LEANDER

Editor's Note:

More than ever, court decisions are redefining the boundaries and practices of the banking community. To keep pace with these decisions and to expand coverage of the banking-law profession, the American Banker is introducing Legal Alert, a column that will appear every other Wednesday.

Court in Nebraska Clears Continental Of RICO Charge

A Nebraska federal court has overturned a jury decision convicting Chicago-based **Continental Bank** of violating the Racketeer Influenced and Corrupt Organizations Act.

The decision, coming at a time when the Justice Dept. has imposed new limits on RICO, is likely to be cited as a precedent by defending lawyers in other RICO cases against banks.

The plaintiffs in the case were investors a Nebraska-based limited partnership in oil and gas that went bankrupt. They charged that Continental knowingly helped the promoters of the concern, K&S Partnership, in creating a false business history that encouraged investors to pour funds into the company. Continental had been a participant in loans made by the original lender, Penn Square Bank.

During the jury trial, the plaintiffs argued that Continental's corporate policies encouraged the alleged crimes of its employees. The federal court found that charges of fraud could be linked to individual employees alone, and that Continental was not liable for their alleged misdeeds.

FIRREA Fallout: Law Firms Face Conflict-of-Interest Suits

The realignment of the regulatory system under the Financial Institutions Reform, Recovery, and Enforcement Act has created conflict-of-interest problems for one major law firm and others that once represented the Federal Deposit Insurance Corp.

Dallas-based Jenkens & Gilchrist, for instance, has represented the FDIC over the past three years in a number of cases, including several directors-and-officers liability lawsuits.

But the firm was sued by the Federal Savings and Loan Insurance Corp. for alleged malpractice during a case involving a failed thrift, **State Savings and Loan** of Lubbock, Tex., that was taken into FSLIC receivership.

Jenkens & Gilchrist is now negotiating a settlement with the FDIC, which was merged with FSLIC as a result of the thrift-rescue legislation.

The FDIC says it is modifying its rules for outside counsel now that the thrift law has created many potential conflict-of-interest problems.

Cohen, a Mergers Specialist, Is Top-Paid Banking Lawyer

Does $1.7 million in annual income sound like good money? That's what **Sullivan & Cromwell** lawyer **H. Rodgin Cohen,** the merger-and-acquisitions specialist who represented Bank of New York during the takeover of Irving Trust, raked in last year.

H. Rodgin Cohen

Mr. Cohen was the highest paid banking lawyer on a *Forbes* magazine list of the nation's 71 highest paid corporate attorneys, published this week. The only other banking lawyer that made the list was Washington-based **Clifford & Warnke** partner Robert Altman.

What the list also reveals: Banking lawyers are not raking in cash at the same rate as their compatriots in mergers-and-acquisition law. And their 1988 paychecks hardly held a candle to those of ambulance-chasing lawyers; who earn their pay through suits involving personal injury. Some earned more than $20 million last year.

Manufacturers Hanover Held Liable in Check-Forgery Case

Banks in New York are liable to pay damages if they honor false checks without taking proper measures to insure that the checks are not forged, the New York State Court of Appeals has ruled. **Manufacturers Hanover Trust Co.** was ordered to repay more than $48,000 to the **Putnam Rolling Ladder Co.**, Putnam, N.Y., for checks forged by the company's bookkeeper.

Manufacturers had argued that it should not have to pay because Putnam had a year to catch the forgeries themselves. But Putnam swayed the court by introducing evidence that Manufacturers processed so many checks each day that tellers would have only four seconds to verify each check with a signature file.

The court held that the Manufacturers check-screening process was superficial and ruled that account holders can only be held liable for forged checks if banks prove they have taken proper steps to verify them.

Thrift Files Junk-Bond Suit Against Boesky and Drexel

In a suit that may spur lawsuits by S&Ls that have lost money in junk-bond investments, a California thrift has filed a complaint in a California district court charging that arbitrager Ivan Boesky – who has been convicted on insider-trading charges – and Drexel Burnham Lambert Inc. urged it to buy $500 million in junk bonds that the complaint said "lacked investment merit." The thrift has since lost $11 million on the bonds, according to the complaint.

The suit involves **Financial Corporation of Santa Barbara** and its **Santa Barbara Savings and Loan Association** subsidiary. Mr. Boesky, who was a shareholder in FCSB, acted in bad faith when he advised the thrift to buy the bonds in 1983 and 1984, according to the complaint. ■

COMMENT

Steps Toward Building Respect for Marketing

By ROBERT P. CADY
Partner, Exchange Resources Ltd.

I heard an interesting story from a colleague the other day. It seems that a major savings bank in upstate New York had experienced another round of cost cutting. According to him, the first major cut was firing the market-research department.

When things get tough, top management lops off the excess baggage, and often this means anything with the word "research" in it. It must be scary to have the title "director of market research" when the rumors start to fly that cost cutting is about to start.

Why is it that in today's highly competitive banking market – where the rhetoric is flowing about improving product distribution, and upgrading sales and marketing capability, and improving market intelligence – that the toughest sell is still the budget for the resources that turn market information into market intelligence?

One reason is that very few top managers have any experience with marketing. Although lip service is given, down in the deepest part of the CEO's heart is an aversion that equates marketing with sales and sales with hucksterism – something that good people shy away from.

Research has a correlation with inactivity in this CEO's mind, a kind of slothful attention to detail with no responsibility for translating numbers into action. Action is the watchword of the new management style of the 1980s, led by new bibles of management style such as "In Search of Excellence."

How many top managers have asked the question, "just what do those research people do?" Worse, there are few in the bank that have an answer. And so, the axe falls. Ask a CEO about market information and his comment is, "Our marketing people handle that."

The Wrong Numbers

Translation: That's not management stuff. We work on the important things like asset ratios and worry about our stock-price dip. The concept of market information and its uses and value is way down the line. The numbers are only of interest if they are on the balance sheet.

Article after article in banking journals points out that product development and distribution is a new ball game for banks. New technology allows products to be delivered by phone, by PC, by fax, by credit card, by mail, either next door or miles from home. Competitors, who do not have the chain of established distribution centers, a.k.a. the branches, do not seem to be much bothered by the lack of bricks and mortar.

Many of these competitors are, yes, nonbanks. Those organizations may have a finance person at the helm these days, but close at hand to this CEO, in an office that might be fancier, and with a salary that is right there at the top, is the person who handles marketing.

Enter Lee Iococca who probably knows his way around a balance sheet better than most, but whose favorite piece of paper is his periodic market-share report, closely detailed, with slippage highlighted along with success. These people own real businesses and in a real business, marketing is firmly involved in the decision process.

Harvey R. Mitchell
Chairman and CEO, Bank One, Texas

Texas Banker Named Chairman Of Banc One Unit

By STEVE KLINKERMAN

DALLAS — Banc One Corp. named veteran Texas banker Harvey R. Mitchell chairman and chief executive of its Texas subsidiary on Tuesday, saying that local talent and connections were needed to rebuild the troubled unit.

"It's important that this be a Texas bank run by Texans," said John B. McCoy, chairman and chief executive of Banc One, Columbus, Ohio. The company is working to complete its takeover of the former MCorp franchise in a deal involving $2 billion of federal assistance.

Mr. Mitchell, 54, was named to the top post of Dallas-based Bank One, Texas, a position previously held by Mr. McCoy. Mr. Mitchell is a former vice chairman and chief executive at InterFirst Corp. and First RepublicBank Corp. He left First Republic before its failure and subsequent sale to NCNB Corp., Charlotte, N.C.

With roughly $13 billion of assets,

Corporate Finance Fees Rekindle Banks' Interest in Latin America

By JAMES R. KRAUS

NEW YORK — While most large U.S. banks have sharply reduced lending to Latin America, many of them are expanding corporate finance activities in this region.

The banks include J.P. Morgan & Co., Citicorp, Chase Manhattan Corp., and Bankers Trust New York Corp. They see rising income from helping Latin American companies structure and execute debt buybacks, debt-for-equity swaps, privatizations, and even new financings.

"Outside the United States, Latin America will be one of the richest areas for corporate finance over the next three to four years," said Arjun K. Mathrani, senior vice president and Western Hemisphere-area executive at Chase.

Bankers believe financial deregulation in several Latin American countries may open further corporate finance opportunities for U.S. banks. They also believe that their large debt

Plus to Cut Key Processing Fee by 50%

By YVETTE D. KANTROW

NEW YORK — Responding to unexpectedly rapid growth in transaction volume, the Plus automated teller machine system is slashing a key processing fee in half.

The fee reduction by Denver-based Plus System Inc., which takes effect in January, was made possible by increasing transaction volume and the resulting drop in processing costs, said president D. Dale Browning.

For Plus and for an increasing number of other ATM networks, success means being able to lower the prices charged to member financial institutions.

"Consumers finally understand that they can get money outside of their community," Mr. Browning said. "That took a really long time."

The price cut by Plus, a 50% drop in its 10-cent basic transaction fee, is expected to be matched by the competing Cirrus network. It follows similar moves by the regional ATM systems that achieved sizable transaction volumes earlier than Plus and Cirrus.

Regional groups including the New York Cash Exchange, Star System Inc., and Yankee24 have passed on the benefits of new-found economies of scale by cutting fees to member financial institutions.

The move by Plus, which is affiliated with the Visa credit card association, demonstrates that the regionals' success is spilling over to the national ATM networks.

"In the six years since the inception

Clarke Warns About Quality Of LBO Loans

Lending by Some Banks To Be Reviewed Quarterly

By BARBARA A. REHM
and DAVID NEUSTADT

Comptroller of the Currency Robert L. Clarke on Tuesday warned that the quality of loans financing highly leveraged transactions is deteriorating and pledged tighter supervision of such lending to avert a potential crisis.

Mr. Clarke said his agency will begin quarterly reviews of lending by specified institutions. Targeted will be national banks that have at least 2% of their assets tied up in loans for highly leveraged deals.

Of 29 national banks that will be subject to these new reviews, 18 are regional banks, said Karen Wilson, the agency's acting deputy comptroller for multinational banking. The focus on regionals reflects their increasing appetite for loans backing leveraged transactions.

Mr. Clarke said regional banks are bulking up on such loans. Ms. Wilson said the regionals' bite of that market increased 21% in the first six months of the year, to $23 billion.

A loan is classified as "highly leveraged" if it finances a leveraged buyout, acquisition, or recapitalization of a business. It also falls under that classification if 75% of the borrowing company's capital is debt, if the transaction doubles the company's liabilities and results in more than 50% of capital being debt, or if the agent bank designates the loan as such.

Mr. Clarke now moves to the forefront of regulators pressuring institutions to reassess their loan risks.

Market Share Data Gain in Importance

By ROBERT P. CADY
Partner, Exchange Resources Ltd.

A GREAT deal has been written recently about the most brutal of market indicators, market share. Slick accounting can jostle some numbers on the annual report to effect a momentary stockholder reprieve. Deft maneuvering with this acquisition or that merger or a division divestiture (who needs that credit card portfolio anyway?) can cast a favorable light on results.

But sooner or later, every organization must face up to its market position relative to competitors. Today, executives are also expected to do something about it, explaining why market share is in a tailspin, or worse, why everything is going so well. As a result, savvy managers see a new role for market share data in managing people and profits.

The pursuit of market share is critical to success, and its timely measurement may well be the most important overall indicator of market management in a competitive environment.

Exchange Resources Ltd., Atlanta, develops marketing technology for the financial services industry.

The key words are "market management," because market share analysis as a report card is next to useless today. By the time the marks are in, there is no way to applaud success or to correct a slide that has become an avalanche.

All of us continue to see and read articles on market share in the journals. The meat of these articles invariably is a discussion of ways to improve market share. We read about a small bank that stayed open late, a new credit card promotion, and better ways to train branch personnel. We read about sales technique, about being department stores or about "re-imaging" the branch, the people in it, and the organization behind it. What we don't read very often are ways to measure these vital numbers.

> Savvy managers see a new role for market share data in managing people and profits.

In general, market share is measured by survey data, public data, exchange data, or a combination of the three. Each has its advantages. By far, the most widespread method is public data. Survey data are more apt to be used for more specific research inquiries, such as the introduction of a new product. Of the three forms of measurement, the sleeping giant is the data exchange.

What are some of the advantages and disadvantages of these forms of market share measurement? The advantage of public information – that is, government-collected data on banks, bank branches, certain products, and the like – is that it is accurate and complete. Banks are required to provide it, and penalties for misfiling inhibit frivolous reporting.

The exhaustive government error procedure and the sheer volume generated by the various Federal Reserve and Federal Deposit Insurance Corp. requirements, however, place the data on the bank's doorstep a year to 18 months after it's been reported.

Also, government data are summarized, offering no individual product data. So if a bank is trying to use public data to manage market penetration or to shore up weak spots in the product mix, it's like asking Coca-Cola to make decisions about Classic Coke's progress against the competition from a year-old report labeled "soft drinks."

Inside Track at Hanover. Manufacturers Hanover Corp. will name a boss for its new "global wholesale bank" any day now, bank sources say. Leading candidates are investment banking head Douglas Ebert and corporate lending head Donald H. McRee Jr. Mr. McRee has the inside track, sources say, though they fret that an outsider could be brought in.

The new unit will combine the bank's corporate lending, investment banking, and international sectors, a spokesman said.

Other expected changes: Donald G. McCouch, head of international, will focus on the Third World debt portfolio while overseas lending goes to the new wholesale boss. The global correspondent banking division is being folded and spread among several other units – including Manufacturer's recently formed Geoserve processing unit.

A "regional bank" will be glued together from Manufacturer's existing retail, small-business, and middle-market banking businesses in New York, New Jersey, and Connecticut.

Details of the reorganization may come after the bank's board meets Nov. 21. The spokesman would not comment on timing.

* * *

Hold the Invitations. C. Paul Johnson, chairman of Chicago's $1.1 billion-asset First Colonial Bankshares Corp., has signaled potential wedding plans with Banc One Corp. His company's community banking strategy might mesh nicely with Banc One or others, Mr. Johnson told analysts recently.

He paused. "I'd better stop there about Banc One." The Illinois barriers against nationwide interstate bank ownership fall in December 1990, and the aggressive Ohio bank has clearly taken notice.

A Banc One spokesman confirmed that earlier this year the bank company sent out "ice breakers" to some 100 banks and holding companies seeking to chat about possible mergers.

Editor's Note:

News takes many forms. There's the official announcement route. And then there's the planned leak, as journalists in Washington know well. Indeed, news is always at some stage of development. Starting today, this weekly column will aim to report stories in their early stages. It will follow people on the move, projects in the works, and other information that prompts bankers to pick up the phone and share what they have heard with their confidants.

* * *

The Eagle Has Landed. Citicorp's new chief legal eagle, John Roche, replaced Hans Angermueller only this month but is already leaving his mark. The refugee from Shearman & Sterling – Citi's favorite outside law firm – is hiring a SWAT team of eager young lawyers to help run the department. Some Citicorp lawyers, spread among its various fiefdoms, fear for their autonomy. But a source close to Mr. Roche says fears of a rigorous centralization are groundless.

* * *

Au Revoir, Bourgeoisie. France's Societe Generale is bidding *adieu* to small-time retail customers in the United States. A banker at the Rockefeller Center branch confirms Sogen is telling "greengrocer type" customers with accounts of less than $100,000 to move elsewhere. Alas. The branch was something of a financial cafe for expatriate Frenchmen, who frequented its lobby talking of bourses and baguettes.

* * *

Trimming the Fat in Toledo. Society Corp. may trim up to 500 employees from Trustcorp's payroll of 3,800 if shareholders approve the merger between the two institutions today. The cost-cutting method of choice will be across-the-board layoffs, though attrition and branch sales also will be used, according to sources at Toledo-based Trustcorp Inc. All but two of 150 workers in a back-office unit in Toledo already have been told they will be let go, one source said. "There will be consolidation of certain areas, but it's premature for us to announce anything," responds a spokesman at Cleveland-based Society Corp.

* * *

It's Lonely at the Top. Kenneth Thygerson is on the move again. After only six weeks at the helm of Denver's Western Capital Investment Corp., he resigned for what thrift officials call "personal reasons." Sources said their erstwhile chief was weary of the long commute to and from his family in San Diego. But skeptics note that the resignation followed publication of a damning front-page article in *Barron's* accusing Mr. Thygerson of "The Trashing of an $11 Billion Thrift." The story chronicled his days as head of San Diego's Imperial Corporation of America. Mr. Thygerson could not be reached for comment.

* * *

Morgan Gives Up a Seat. Cost-cutting efforts at J.P. Morgan & Co. got a modest assist when its revamped securities unit decided not to renew its lease of a seat on the New York Stock Exchange this month. "It's an easy way to save $100,000 a year," says an official. The equity brokerage unit continues to own one seat and also execute trades through independent brokers. Morgan earlier this year announced an internal expense control plan that includes cutting as much as 10% of its employee base.

Highly leveraged transactions include loans to LBOs, loans to non-LBO highly leveraged transactions, and subordinated debt and equity of highly leveraged transactions.

Source: George Salem, Prudential-Bache Securities

Continued from Page 1

The Comptroller's office "has stated that HLTs [highly leveraged transactions] did not pose undue risk to the safety and soundness of individual banks or to the banking system," Mr. Clarke said in a speech in Atlanta. "But we've seen growth, quality, terms, participants, and resolutions of those transactions change in the last year."

Mr. Clarke also predicted that banks buying big chunks of leveraged buyouts will have a harder time selling them. He suggested that all banks acting as agents set a cap on the amount of such loans they will keep.

"In that one of the so-called comfort factors in this business is the relatively small portion of the transactions that agent banks are willing to hold for their own accounts, this backlog in the distribution pipeline is worrisome," he said.

The Comptroller's office already has conducted targeted highly leveraged transaction exams of the nation's 11 largest national banks. This is the second consecutive year the Comptroller's office has taken a specific look at leveraged lending by the biggest national banks.

As another indication of the new concern regulators are attaching to highly leveraged transaction lending, the annual joint regulatory study of large credits held by both state and national banks – known as the "shared national credit program" – this year specifically targeted highly leveraged transactions. The study found that a fourth of all loans greater than $20 million and shared by two or more banks are highly leveraged transaction loans. About 900 highly leveraged transaction loans worth $173 billion were discovered by regulators.

In general, Ms. Wilson said, underwriting standards being used are sound, but she noted that regulators warned some banks to tighten highly leveraged transaction lending habits.

According to Mr. Clarke, who addressed the commercial lending trade group Robert Morris Associates, most regional banks acquire highly leveraged debt through participations or a loan syndication group. "And a regional bank's ability to influence or impact ongoing credit decisions in some cases is severely limited."

Mr. Clarke urged regional banks jumping on the leveraged-buyout bandwagon to adopt proper risk-management strategies and to limit their overall involvement in the LBO market.

To date, banks appear to have been duly compensated for the risk LBO loans pose, but that may not be true in the future, Mr. Clarke said, warning that competition in this high-fee activity is squeezing margins.

"This type of competition almost always leads to abuses," Mr. Clarke said. "Credit terms and structures are deteriorating."

At the same time that regulators are expressing concern about bank's exposure to buyouts, they also broadened what they consider highly leveraged transactions. In October, the Fed, the Comptroller's office, and the Federal Deposit Insurance Corp. agreed on a common, expanded definition for highly leveraged deals to the current description.

Criteria Too Broad, Some Say

Some bankers have complained that the new criteria are too broad and will now include too many loans to be useful.

A new study by George Salem, bank analyst at Prudential Bache Securities Inc., adds another aspect to bank's highly leveraged transaction exposure. Mr. Salem added bank's holdings of subordinated debt and equity of highly leveraged companies.

The additional category only adds substantial amounts of exposure for three bank companies: Citicorp, with $1.1 billion, and Bankers Trust New York Corp. and First Chicago Corp., each with $500 million.

Both Citicorp and First Chicago have very active venture capital subsidiaries, which invest in buyouts.

Also, for the first time, Mr. Salem breaks out the portion of banks' highly leveraged transaction portfolios that is for leveraged-buyout loans as opposed to other types of transactions, such as recapitalizations and acquisitions.

BankAmerica Corp. has the highest portion of its highly leveraged transaction loans to LBOs, 91.7%. Citicorp is second with 82.8%. Bankers Trust and Manufacturers Hanover Corp., two leading buyout lenders, both have about two-thirds of their loans to LBOs. First Chicago has the lowest proportion to LBOs, only 47.1%. ■

Valley Federal S&L Loses $70 Million in 3d Quarter

VAN NUYS, Calif. — Valley Federal Savings and Loan Association announced that it lost $70.6 million in the third quarter.

The loss resulted in part from a $89.9 million pretax charge to earnings at the Van Nuys thrift. The charge includes a $62 million writeoff of capitalized servicing at the thrift's mobile home financing subsidiary, All Valley Acceptance Co.; the addition of $18 million to real estate loan reserves; and the elimination of the association's $9.9 million of goodwill. ■

Dollar Dry Dock Offers Gold Card with 11.9% Rate

By YVETTE D. KANTROW

NEW YORK — Less than two months after it sold off a $95 million portfolio of gold card loans, Dollar Dry Dock Bank has introduced a gold card with an initial interest rate of 11.9%.

The White Plains, N.Y.-based bank is touting its new Visa gold card as one of the lowest-priced cards in the country. After six months, the interest rate will jump to 15.9%.

"While no one is offering a card at 11.9%, even 15.9% looks very attractive," said Nicholas Rizetta, a Dollar Dry Dock senior vice president. Cardholders are also charged a $40 annual fee.

Dollar Dry Dock is marketing the card only to consumers in the New York metropolitan area. The $5 billion-asset bank's strategy is to strengthen its business in its primary retail market.

"Cross-selling is what it is about today in the banking business, so we are concentrating on people who are close to our financial centers," Mr. Rizetta said. The bank calls its branches financial centers, which offer investment, travel, and other services in addition to banking.

In September, Dollar Dry Dock sold the gold card accounts of customers outside the New York metropolitan area to Monogram Bank USA, a unit of General Electric Capital Corp., for an undisclosed sum. At yearend 1988, the bank reported $257 million in credit card receivables.

Dollar Dry Dock has chosen to concentrate on the upscale credit card market. Last year, the bank sold about 100,000 regular MasterCard and Visa accounts to Lomas Bank USA, a Delaware credit card bank that was recently renamed First USA. Gold cards are targeted to affluent customers and carry higher credit limits than regular cards.

According to Mr. Rizetta, Dollar Dry Dock is initially offering its new Visa gold card to 900,000 consumers with excellent credit ratings. The bank is expecting a 2% to 3% response rate. ■

LBO Gloves Are Off As Comptroller Challenges Lenders

By DAVID NEUSTADT

NEWS ANALYSIS

NEW YORK — The Comptroller of the Currency's warning this week on leveraged-buyout loans represents a fundamental change in his attitude toward those transactions.

According to staff members at the Comptroller's office, the turnaround reflects the continued large volume of leveraged buyouts this year, a rapid rise in the number of problem loans, and deterioration in the credit quality of new deals.

In April, Comptroller Robert L. Clarke issued an optimistic report on commercial bank exposure to highly leveraged transactions, or HLTs. On Tuesday, speaking to a convention of corporate lending officers, Mr. Clarke unveiled his new position.

"In the past, the OCC has stated that HLTs did not pose undue risk to the safety and soundness of individual banks or to the banking system," Mr. Clarke told a Robert Morris Associates convention in Atlanta. "But we have

Farm Credit System Undercuts Banks, Says ABA President

By ROBERT TRIGAUX

WASHINGTON — A running feud between commercial banks and the Farm Credit System flared up again this week as the head of the American Bankers Association charged that the government-sponsored agency was using below-market rates to lure farm borrowers.

"The Farm Credit System poses a very real threat to banks, and to the economy, so long as it permits the kind of predatory, below-cost pricing we've seen in Omaha, St. Paul, and right here in St. Louis," C.G. Kelly Holthus, the ABA president, said at the industry's annual farm credit convention.

But the chairman of the Farm Credit Administration, which regulates Farm Credit System lenders, rejected the charge.

"I have been assured by our chief examiner that our examinations to date have revealed no evidence that predatory pricing is being practiced by any of the Farm Credit institutions," Harold Steele on Tuesday told 600 farm bankers and industry representatives attending the ABA's annual agricultural credit convention in St. Louis. Convention remarks by both Mr. Holthus and Mr. Steele were released in Washington.

The Farm Credit Council, which lobbies for the Farm Credit System, called the ABA complaints "absurd" and said there were no complaints by farmers about interest rates.

Sharp competition between commercial banks and Farm Credit System institutions to win the business of farmers is hardly new. But the strong recovery of the agricultural sector – after the mid-1980s failure of hundreds of farm banks and the bailout of the Farm Credit System – has revived animos-

CityFed Chief Admits Thrift May Face Seizure by Regulators

By REBECCA COX

NEW YORK — The chief executive officer of CityFed Financial Corp., one of the nation's largest thrifts, acknowledged on Wednesday that the ailing New Jersey company may be close to a takeover by federal regulators as its losses mount from real estate development loans.

The statement by John W. Atherton accompanied the disclosure of a third-quarter loss of $223.7 million, equal to $11.75 a share, for the Somerset-based holding company.

The losses were caused mostly by bad construction and development loans in New Jersey, other Middle Atlantic states, and Florida, according to Michael J. Rust, director of corporate relations. CityFed's real estate portfolio began to turn sour in 1987, contributing to losses for the past four consecutive quarters. The third-quarter figure is almost 10 times the previous record loss of $24 million in the last quarter of 1988.

Its cumulative loss through nine

Lincoln Auditor: Tainted, but Not Charged

By JIM McTAGUE
and JOHN FORDE

NEWS ANALYSIS

After weeks of top billing in the Lincoln Savings scandal, real estate magnate Charles H. Keating Jr. and the five U.S. senators who pleaded with regulators to go easy on him are being pushed off center stage by a supporting character – the accounting firm of Arthur Young & Co.

The firm, in the course of five House Banking Committee hearings on Lincoln Savings and Loan Association, has been vilified by federal regulators for allegedly hiding the thrift's losses with creative bookkeeping. And it has been blamed by the so-called "Keating Five" senators for convincing them that Lincoln was being persecuted by former Federal Home Loan Bank Board Chairman Edwin Gray, necessitating their help.

Kenneth Leventhal & Co., a competing accounting firm hired by the regulators to look at 15 real estate deals done by Lincoln, concluded that the Irvine, Calif., thrift had used "cookbook rules" to justify nonexistent profits. The report did not specifically fault Arthur Young's performance, however, as Leventhal reportedly never looked at audit statements.

And Richard Breeden, new chairman of the Securities and Exchange Commission, testified that Arthur Young was uncooperative with his agency, which has been investigating bond offerings by Lincoln's parent, American Continental Corp. of Phoenix.

COMMENT

Will Top Banks Get a Break on Deposit Insurance?

By IRVINE SPRAGUE

'Savvy depositors, those with big dollars, will know that giant banks do not fail, so they will move their money away from banks that would be exposed to the haircut to those that would not.'

— Irvine Sprague

Taking a haircut" will become the buzzwords over the next six months as the fight heats up over how best to revise the federal deposit insurance system.

This is the shortcut language for the big bank proposal to insure all domestic deposits up $100,000 and then cut the protection – perhaps by 15% – for deposits over the insured limit. Alternative proposals would reduce the $100,000 to a lower figure or cut the protection to something less than 100% on all deposits.

All in the name of market discipline.

The ploy is aimed at distracting criticism over the "too big to fail" doctrine, which states that really big institutions have not been and will not be allowed to close their doors. Stockholders may take a hit, but all depositors and other creditors are fully protected in the money-center banks.

Recently, in speaking to the National Bureau of Economic Research in Cambridge, Mass., I encountered a new theory put forward by some of the economists. Deposits at large banks, they suggested, are protected by the too-big-to-fail doctrine; depositors at small banks are protected because the institutions have few if any uninsured deposits. Depositors at midsize banks are the only ones at risk, the economists argue.

The Citibank theory, and others resembling it, is that under the the haircut proposal, all banks would be treated alike: big, midsize, and small.

There is just one flaw in this reasoning. A fatal one.

Savvy Depositors Know Better

The goal of equal treatment sounds wonderful. The problem is that savvy depositors, those with big dollars, will know that giant banks do not fail, so they will move their money away from banks that would be exposed to the haircut to those that would not.

The second big debate should be over the assessment of foreign deposits and deposit-like instruments. The present system is a disgrace as it provides 100% insurance protection for all depositors and creditors in the big banks yet allows them to escape payment for much of this protection. In some cases, the insurance bill is for less than half of the protection.

One could argue that there is nothing in law or regulation, nothing written anywhere, that says that the giant banks should not be allowed to fail. It is simply a fact of life. Continental Illinois taught us this. The largest bank ever to be allowed to fail, and its depositors allowed to lose, was Penn Square, a $30 million shopping center bank that grew in short order to $500 million through some very dubious dealings.

Let's spell it out in simple terms:

Small banks basically depend on two sources of funds: deposits and capital. Large banks, on the other hand, use a wider variety of funding sources, including nondeposit borrowings and deposits raised in overseas offices. Thus, the small banks pay insurance premiums assessed against virtually all their funding base, while the largest banks, which receive far broader protection, pay premiums on a much narrower portion of their funding base.

Virtually all of the foreign deposits are in the money-center banks but there are 270 in all with some such deposits. If we assess and insure foreign deposits, it would cause complications if one of the smaller banks with foreign deposits were allowed to fail, but not complications of such significant nature as to override the need for fairness.

While writing my 1986 book "Bailout," I ordered a computer run of the mix of domestic and foreign deposits in the money-center banks. After passage of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, I asked that the tables be run again.

See WILL: Page 9 ►

Mr. Sprague served as chairman or director of the Federal Deposit Insurance Corp. for more than 11 years, during which time he handled 374 bank failures. He is the author of the 1986 book "Bailout: An Insider's Account of Bank Failures and Rescues."

The Lobbyists

By Barbara A. Rehm

ABA Group Seeks Smoother Access To Loan Resales

The **American Bankers Association** has formed a group in the hope of opening doors to the secondary markets. Bankers are seeking ways to move assets off their balance sheets and thus want more access to these markets.

As a first step, members of the ABA secondary-market liaison subcommittee met last week with senior lenders from two government-sponsored agencies that make a secondary market for mortgages, the Federal National Mortgage Association and Federal Home Loan Mortgage Corp.

The group wants Fannie Mae, Freddie Mac, and other agencies to detail what they require of loans before they are securitized. For example, what environmental-hazard criteria must banks follow for their loans to pass the agencies' muster?

Kevin F. Walsh

"Many banks do not think that they have the volume to warrant participation," said **Kevin F. Walsh**, the group's chairman and executive vice president at NBD Illinois Inc. "However, the secondary market is willing to work with banks in communities that can generate $1 million a month in residential production."

Mortgage Insurers Say FHA Will Lose on Bigger Loans

The **Mortgage Insurance Companies of America**, taking the offensive against higher loan limits on FHA-insured mortgages, said this week that larger loans produce larger losses for insurers.

After Congress voted to increase the Federal Housing Administration's loan limit for one year, Rep. **Gerald D. Kleczka**, D-Wis., asked the **General Accounting Office** to study its impact. GAO in turn asked the insurers' group for data on losses produced by mortgages greater than $90,000, the former cap on FHA loans. The FHA may now insure loans made on homes up to 95% of the median sale price.

Congress was attracted to the hike in the FHA's loan limit because it would increase FHA premium revenues next year by an estimated $50 million, but the group's president, **William H. Lacy**, said any gain would be buried by the losses FHA will suffer.

Mr. Lacy, at a news conference Wednesday, said after analyzing 514,000 mortgage loans that the mortgage insurers group concluded that a $188,000 mortgage is 1½ times more likely to default than a $90,000 mortgage. The group turned over its analysis and the raw data to the GAO.

"Unfortunately some people don't like to see this data," he said. "But we run our companies on this data."

Mr. Lacy acknowledged that it serves his members to keep FHA loan limits capped, but said that it was hard to compete against a government agency that does not operate at breakeven.

Cushman & Wakefield Sees Fertile Ground for Lobbyist

Cushman & Wakefield, the New York-based real estate concern, is deploying senior vice president **Gerald R. Mylroie** to lobby the Resolution Trust Corp.

"Rather than RTC getting 100 phone calls from Cushman & Wakefield brokers, the idea is, they can have one point of contact with me," Mr. Mylroie explains.

His goal? Drum up business for Cushman & Wakefield. Mr. Mylroie thinks Cushman & Wakefield can help the RTC manage, appraise, and sell the thousands of real estate assets it will take over from failed thrifts.

Cushman & Wakefield, Mr. Mylroie notes, is the nation's largest nonowner manager of commercial office space. It employs more real estate appraisers than any other company, ranks third in sales agents, and has vast experience selling property, he says.

Gerald R. Mylroie

Mr. Mylroie also expects to run defense. Right now, Cushman & Wakefield is guarding against the RTC's formulating conflict-of-interest rules that prevent any one company from taking multiple roles in the thrift cleanup. Mr. Mylroie is confident that the agency cannot take a hard line. "There's too big a job to do to impose that kind of restraint."

The RTC board plans to take up the ethics issue at a meeting Wednesday.

Will Big Banks, as Usual, Get a Break in Deposit-Insurance Reform?

▸ Continued from Page 4

Surprise. Nothing had changed. The same big banks continue to get their free ride.

This time, John Quinn, the FDIC's chief of banking statistics, added a new column to the table and it is most revealing. Domestic office non-deposit liabilities, excluding subordinated debt, show a pattern of free-ride protection that almost equals that in the foreign deposit column.

In the past, I have heard no one who would argue that a free ride on foreign-deposit protection is fair, but somehow this fairness doctrine is never converted into legislation.

True, the Senate two years ago passed a bill to assess foreign deposits but this was in the context of a budget resolution, and it disappeared in the dark of the night during the conference committee's deliberations.

This history gives some hope that justice will be done this time around. The iron vises of the Gramm-Rudman bill are beginning to bind and the administration and the Congress will be looking for revenues: the Congress to pay its bills, the President to avoid raising taxes.

FDIC income has nothing to do with the federal budget but an anomaly in the budget computations allows the national budget deficit to be reduced by the amount of FDIC income. The numbers should be tempting to the Budget committees.

Ante Has Been Raised

Enormous sums are involved. This is not going to be a fight over dominos or poker chips. The new legislation raised the ante by just about doubling the FDIC insurance assessments over two years.

Top 10 Banks in Foreign Deposits

Dollars in billions

	Foreign deposits	Domestic deposits	Nondeposit liabilities
1. Citibank	$61.8	$44.2	$19.6
2. Morgan Guaranty Trust	37.1	11.9	10.2
3. Chase Manhattan Bank	33.8	27.7	9.4
4. Manufacturers Hanover Trust Co.	20.1	23.5	7.0
5. Bank of America	20.2	50.6	7.3
6. First National Bank of Chicago	15.1	13.9	5.6
7. Republic National Bank of New York	8.2	5.8	4.5
8. Irving Trust Co.	8.0	7.0	4.7
9. Bank of New York Co.	7.0	11.9	3.8
10. Security Pacific National Bank	6.9	30.4	11.6

Source: June 30 call reports

The current deposit insurance assessment rate of 0.083% of domestic deposits increases to 0.12% in 1990 and to 0.15% in 1991. Assessment credits that were routinely voted for 50 years – sometimes as much as 50% – disappeared the past four years and it is difficult to see them looming on the horizon.

With so much at stake, the lobbying forces are gearing up. The American Bankers Association has assembled a blue-ribbon committee representing banks of all sizes and all geographical regions.

The Independent Bankers Association of America has put together a similar group and beyond that is taking the unprecedented action for Washington in hiring a consumer market-research concern to develop some facts before taking a position.

> 'Once the "haircut" language gets to be old hat, the talk will turn to 'market discipline' and 'risk related' premiums, both of which are nonsense.'

Dollar Signs in Sight

Treasury is gearing up and the consultants, lawyers, and lobbyists are salivating at the sight of the dollars they will be making.

Once the "haircut" language gets to be old hat, the talk will turn to "market discipline" and "risk related" premiums, both of which are nonsense.

Market discipline has been a dream of many for years and it still gets lip service, even from former regulators who should know better. FDIC chairman Bill Seidman, in the Aug. 30 *Wall Street Journal,* told the story succinctly: "We have a hard enough time figuring out a bank's financial condition. I don't see how you can expect a depositor to do it," he said.

Even More Tricky

Risk-related premiums are even more tricky. Those of you who have had to deal with truth-in-lending rules, with their thousands of pages of regulations, will look back at the experience as a haven of clarity if risk-related rules mushroom.

All in all, it will be an exciting time. The bottom line, of course, if we can count the past as in indicator, is that the big banks will win the fight hands down. What we can hope for is that the national press will cover the lobbying efforts like a blanket and that the local press will hold each senator and congressman to account for his or her vote. ■

Clarke Sees Peril In Loans to Fund Takeovers Abroad

By BARBARA A. REHM

WASHINGTON — For the second time in as many weeks, Comptroller of the Currency Robert L. Clarke warned bankers against charging into highly leveraged lending.

In a speech Monday in London, Mr. Clarke said he was concerned about European lending by U.S. banks for highly leveraged transactions that are likely to occur as Europe opens up its borders and businesses consolidate.

"Many U.S. banks are already planning for increased involvement in Euro-HLT type transactions as the unified European market of 1992 draws nearer," Mr. Clarke said, noting that with their experience in such loans, domestic banks hold a competitive edge over foreign counterparts. "American banks have targeted cross-border merger and acquisition activity in their strategic plans."

Mr. Clarke, in remarks released here, cautioned U.S. banks about structural and cultural differences across the Atlantic that will pose different lending risks from those found in leveraged financing here.

"For example," he said, "because a U.S.-style junk bond market in Europe has not developed, risks that would be assumed by bond underwriters in the U.S. will likely be assumed by bank loan syndication departments in Europe."

Further, some U.S. banks do not have the loan-distribution networks in Europe that they have developed here. Thus, Mr. Clarke said, some U.S banks may have a hard time selling down a highly leveraged deal.

Add to that the fact that Europe uses different accounting standards, he said.

"Once all the addition and factoring is done, you end up with interesting

Steady Course Seen For Detroit Bank After CEO Retires

By RICHARD RINGER

CHICAGO — Manufacturers National Corp. chairman and chief executive Dean E. Richardson said he will retire early next year, but analysts expect the company to continue with its cautious but effective bank strategy.

Mr. Richardson, 61, announced last Friday that he was stepping down as chief executive officer on Dec. 31 and as chairman next March 31. His early retirement from the Detroit-based superregional bank company was expected.

Gerald V. MacDonald, president of the holding company, will succeed Mr. Richardson. Mr. MacDonald, 51, will also retain his responsibilities as chairman and chief executive officer of the company's lead bank, Manufacturers National Bank of Detroit.

Michael T. Monahan, 50, will succeed Mr. MacDonald as president of the holding company while keeping the job of president and chief operat-

Wall's Defense on Lincoln Fiasco: I Made Errors, but Inherited Mess

By JIM McTAGUE

WASHINGTON — Fighting to keep his job as the nation's top thrift regulator, M. Danny Wall intends to concede some mistakes in handling the closing of the Lincoln Savings and Loan Association. But he will also mount an attack on his predecessor for leaving a mess in his lap when he took over as chairman of the Federal Home Loan Bank Board in July 1987.

Mr. Wall will acknowledge to the House Banking Committee today that examiners had enough evidence to shut down Lincoln in August 1987.

But he and his staff will also testify that the Lincoln case was complicated by, among other things, deliberate leaks to the press in December 1986 of confidential examination data by Edwin J. Gray, Mr. Wall's predecessor as head of the Bank Board. Lincoln's Charles H. Keating Jr. had threatened to sue because of the security

COMMENT

Rethinking Cost Control

By SANFORD ROSE

Despite all their chatter about progress in cutting costs, most banks have realized only a fraction of their expense-reduction potential, argues Booz-Allen & Hamilton. The reason is that, hard as it may be to believe, bankers don't really understand the sources of their expense problems, and they haven't been under strong enough economic pressure to remedy this lack of understanding.

A relatively benign economic environment and some special circumstances have allowed banks to generate rather lush revenues in the past few years. Unfortunately, however, the outlook for sustained revenue growth is not terribly good. The economy is clearly slowing. Perhaps equally important for banks, especially large ones, the opportunities to garner deal-related or merchant-banking revenues may soon dry up.

In the last few years, merchant-banking revenues – those derived from loans made to finance leveraged buyouts, mergers and acquisitions, and other corporate restructurings – have become an increasingly important fraction of total revenues, both at large banks, which are first-tier lenders, and at many smaller institutions, which buy pieces of the high-spread LBO loans originated by their larger brethren.

The impending shrinkage in deal-related profits will stem in part from the de-

Rethinking Cost Control

➤ Continued from Page 1

cline in economic activity. But it will also result from several other key factors. The so-called easy deals have already been done, and there is an increasing perception of a diminished supply of undervalued companies. The threat of governmental intervention to curb the tax advantages of debt seems omnipresent. And, finally, there is increasing criticism of highly leveraged transactions, both within the financial community and in society at large.

It should be pointed out that, notwithstanding its lush deal-related revenues, the banking industry's costs have been growing faster than its revenues for many years. As deal revenues falter, this unfavorable cost-revenue trend will obviously be aggravated, causing banks to focus on cost control with a single-mindedness that has thus far been lacking.

Blaming Fixed Costs

In Booz-Allen's view, by far the most important barrier to effective expense reduction is the widespread lack of knowledge about the reasons for excess expenses. Many bank managers think that their major problem is one of high fixed costs. This is because so many costs, an estimated 50% or more of the expense burden, seem to be indirect and shared among many products and functions, e.g., corporate overhead.

In other words, a large chunk of costs are alleged to be built in and thus beyond the control of individual managers. And if that is the case, the elimination of unprofitable, high-cost products will serve only to reduce revenue without a commensurate drop in expenses. The overhang of fixed expenses will simply have to be allocated to the remaining products, raising their costs and triggering the need for still more retrenchment.

Additionally, bankers tend to feel that they have shared customer bases. That is, the commercial-loan customer is also viewed as a consumer of, say, cash-management services. So if the bank does not sell cash-management services, it runs the risk of undermining its loan-marketing efforts.

This belief in customer linkages encourages banks to offer practically any service that a customer is likely to buy, even if they are high-cost and uneconomic producers of that particular service.

Booz-Allen does not think that most costs or customer bases are in fact shared. Its analysis of shared costs, for instance, reveals that these are often considerably less than 50% of total costs.

Says Donald E. Kerr, a vice president of the consulting firm: "If one looks at a typical operations center and disaggregates its functions, one finds that the vast majority of costs – some 90% – are unique to individual products. Only 10% of overall costs – those attributable to centralized customer service and staff support – are truly shared among products."

The implication is that, contrary to what many bankers think, the elimination or pruning of marginal products can be achieved without raising the unit costs of the remaining attractive products. Otherwise stated, although many costs seem fixed – and indeed are in the very short run – most are highly variable in the medium and long run.

Customers Unbundle

The belief in overlapping customer bases is equally unfounded. Only a small proportion of bank customers currently bundle their purchases of financial services, the consulting firm has discovered. Although very small firms clearly tend to buy credit products and cash-management services from the same bank, many middle-market and almost all large companies do not. And the trend is toward more, not less, unbundling.

This suggests that if a bank is a high-cost producer of either cash-management or credit services, it can exit its disadvantaged product segments without much fear of losing customers for those services it can more efficiently deliver.

Abandoning high-cost products and businesses represents a way of paring what Booz-Allen calls "inherent" costs – those generated by what a bank does. Additional opportunities exist to trim what are termed "structural" costs – those generated by how something is done.

Swollen structural costs are very often a result of lack of scale. A surpris-

Crime Blotter

By TOM LEANDER

Editor's Note

Bank crime has captured the imagination of movie producers, novelists, and the public. But for bankers it has become an increasingly complex problem as banks become more exposed through access to automated teller machines and greater reliance on technology. Crime Blotter, a weekly column beginning today, will alert bankers to the latest gambits of the unscrupulous that put their institutions at risk.

NJ Scam: Recycling Items Found in Banks' Trash

A ring of check forgers in southern New Jersey and eastern Pennsylvania has found pay dirt in bank dumpsters.

Using blank checks and old credit applications fished out of bank trash, the so-called Split-Deposit gang has stolen at least $150,000 since February, according to Ronald Steadman, a detective with the New Jersey State Police.

The gang uses blank checks that have been tossed away because accounts were closed, according to Mr. Steadman.

Gang members then go to another bank and dig out a discarded credit application or tossed-away deposit slip that has the number of an existing account. They forge a sum on a blank check and make a deposit into an account that has money in it, cashing a part of the bogus deposit during the transaction.

The Split-Deposit gang has hit virtually every major bank in southern New Jersey, Mr. Steadman said.

Orange County Cops Nab Suspect; Another at Large

Police in Orange County, Calif., are breathing easier now that the "Tijuana bandit" is in custody. But a robber known as "the Vet" is still at large.

Last Wednesday, police nabbed David Eugene Cabrera, 34, as he fled after allegedly robbing American Interstate Bank in Orange, Calif. Mr. Cabrera, who is suspected of 11 other bank and thrift robberies in the county since Oct. 26, was dubbed the Tijuana Bandit by police because he wore a hat inscribed with the word "Tijuana" during many of the holdups.

Police are still hunting for a man who robbed four savings and loan associations on Veteran's Day. He has been nicknamed the Vet, said Bucky Cox, an FBI agent in Santa Ana. The FBI would not disclose how much money was stolen in each case.

Detroit Murder Renews Calls for ATM Security

The latest incident of violent crime at an automated teller machine – the slaying of a Detroit couple – has bolstered the case for increased security at locations where cash is dispensed.

Barry Schreiber, chairman of the research committee of the ATM Security Task Force of the Electronic Fund's Transfer Association, suggests that city governments adopt building codes that require bright lighting on streets outside ATMs. He also recommends that banks use cameras with a 180-degree, fish-eye lens to aid detection of forced withdrawals at ATMs. Cameras are usually trained only on the customer immediately in front of the machine.

Chicago Accounting Firm Creates Gumshoe Unit

Checkers, Simon & Rosner, a Chicago accounting firm, has formed a subsidiary to provide detective services for regulators, banks, and other businesses. The new unit, called Checkmate Services Inc., will be the first subsidiary of a U.S. accounting firm to hold a private detective license, the company says.

The firm, which has a staff of 20, is negotiating a deal with the Federal Deposit Insurance Corp. and the Resolution Trust Corp. to trace and collect hidden assets, according Checkmate president Charles Blotkin, a former FBI agent and director of security at Zenith Electronic Corp.

Former Strike-Force Chief Defends Antifraud Teams

Financial fraud cases may be tougher to prosecute if Attorney General Richard Thornburgh carries out his proposal to eliminate special strike force units, a former strike force chief warns.

Laura Brevetti, who ran the Brooklyn unit until last August, opposes the move, arguing that the independence of the strike forces from local political influence and their ability to investigate a case for years has been invaluable in hunting down financial criminals.

One of the Brooklyn strike force's biggest cases ended, after a four-year investigation, in the conviction of Mario Renda for a fraud that involved 18 banks and savings and loans. ■

Loan Sales Market Slows as Role of Top 5 Sellers Declines Slightly

By ANGELA WILSON
Asset Sales Report

> Some syndications executives believe the secondary market is maturing, while others cite an increase in loan distribution activity on the primary level as the cause of the decline in the secondary market.

NEW YORK — Although the major players remain the same, the secondary loan sales market is undergoing a steady transformation characterized by slower growth and a slightly declining role for the giants of the market.

That is the most significant information to be gleaned from the loan sales figures for the second quarter of 1989, which were compiled for *Asset Sales Report* by the data services division of Automatic Data Processing. (Tables are on page 14.) The data are based on the quarterly call reports that banks are required to file with the Federal Reserve Board.

Total loan sales volume in the second quarter was $276 billion, a sluggish 3% increase from the previous quarter's $268 billion. The small increase put the market back to its fourth-quarter 1988 level.

The loan sales figures from the last few quarters indicate that the vigor of the market may be declining. The gargantuan volume increases of past years – from $111 billion in the fourth quarter of 1986 to $287 billion by fourth quarter 1988 – appear to be a thing of the past.

Differing Interpretations

Bankers offer various reasons as to the cause of the decline. Some syndications executives believe the secondary market is maturing, while others cite an increase in loan distribution activity on the primary level as the cause of the decline in the secondary market.

The head of syndications at a midwestern bank remarked that in the early days of secondary loan sales "the market was witnessing the sheer development of a new product." Although loan volume has declined, "it may not be a negative reflection [on the market]. We may be at a point in the product cycle that is approaching maturation," the banker said.

But a distribution executive at a money center bank offered another reason for the decline of volume in the secondary. "A lot more deals are being done on the primary level and won't be measured in those secondary numbers."

The Fed figures also show that the top five loan sellers, which control the lion's share of the market, are seeing their stranglehold weaken slightly. The market share of top five banks has declined from 74.7% in the fourth quarter of 1988 to 73.6% in the second quarter of 1989.

This trend did not hold true for the top 10 banks, whose share of the market increased to 84.4% in this year's second quarter from 80.87% in the last three months of 1988. The top 10 banks controlled only about 60% of the market in the fourth quarter of 1986, rising to almost 78% the following year.

As for the players themselves, the top 10 lineup showed few changes. Security Pacific National Bank, Los Angeles, easily maintained the No. 1 position, with 39% of the market, or $110 billion in loans sold, in the second quarter, up from $107.8 billion in the previous period.

Bankers Trust Still No. 2

Perennial runner-up Bankers Trust Co. kept its position despite a 17% decline in volume, to $44.8 billion from $53.9 billion previously. A spokesman for the New York-based company said "fewer deals means less volume." He noted that there has been an increase in the number of loan sellers: 4,899 banks sold loans in the second quarter, compared with 4,684 in the previous quarter.

Chase Manhattan Bank once again held the No. 3 position, with sales of $18.1 billion, up from $15.2 billion in the previous period. The banks in positions 4 through 6 – Citibank, Chemical Bank, and Mellon Bank – experienced sales increases of 21%, 10%, and 0.65%, respectively.

The major changes begin with the No. 7 bank, Morgan Guaranty Trust Company of New York, which edged out Marine Midland Bank, Buffalo. Marine showed a sharp decline in loan sales volume, which a bank executive suggested was due to decreasing short-term loan sales volume.

These are, of course, the numbers most syndication executives love to hate. "They make interpretation a vague science, at best," one money center banker commented dryly. Other bankers are not sure what numbers the Fed wants, because the call report forms are so poorly designed.

For example, an executive in the corporate finance department of Wachovia Bank and Trust Co., Winston-Salem, N.C., attributed his division's fantastic loan sales volume increase – from $102 million in the first quarter to $348 million in the second – to a reporting error.

NY Thrift Group Honors Columbia Banking Chief

NEW YORK — William B. Mackenzie, president of Columbia Banking Federal Savings and Loan Association, Rochester, N.Y., has received the distinguished service award from the New York League of Savings Institutions.

The award is the highest bestowed by the trade group and is presented to an officer, director, or employee of a New York State savings institution for outstanding contributions to the industry over an extended period of time.

The league represents 83 savin and loan associations and savings ban with combined assets of more than $6 billion. ■

What's wrong with this picture?

If it doesn't jar your eye to see an American Express travelers cheque displayed in the midst of your Visa products, we'd like to point out some disconcerting facts.

You've got a lot of time, money, and prestige invested in Visa. And when you promote Visa, you're promoting your bank right along with it.

But American Express is your most relentless competitor.

They sell a competing travel and entertainment card.

They sell a competing credit card.

They're after your most valuable customers.

So when you put American Express cheques right alongside Visa, you're not only putting out a very confusing message, you're pushing your biggest rival.

The remedy, though, is a simple and proven one. Apply for another Visa. Visa Travelers Cheques.

They fit in naturally with your Visa Classic Card, your Visa Gold Card, and your Visa Business Card.

And like all Visa products, they've got two good names on them. Yours. And ours.

Like Visa cards, Visa Travelers Cheques are a thriving product. In 1988 U.S. sales were up 9% to $2.9 billion. Worldwide they were up 21% to $10.5 billion during the same period.

In comparison, worldwide sales of American Express travelers cheques were up only 7% for the comparable period.

That's a comparison we're happy to make. And that's a picture you won't find anything wrong with at all.

Data Source: Federal Regulatory Report of Condition (RC) for all FDIC-insured commercial banks. These data were provided to American Banker by **ADP's Data Services Division, New York.** ADP restates prior years' data for mergers. **Description of table:** The 50 FDIC-insured banks with the largest amount of loans sold during the calendar quarter ended June 30, 1989 (RC, Schedule RC-L-Contingencies, memorandum item 1). **Loan Sold During Quarter** are "loans originated by the bank and sold or participated to others during the calendar quarters" listed above. The data are consolidated and include loans originated by the bank and then sold or transferred by the bank to "others" during the calendar quarter regardless of when the loan was originated by the bank and regardless of whether servicing has been retained by the bank. "Others" include the bank's own trust department and affiliates and subsidiaries not consolidated in the Report of Condition. Also included are those portions of loans sold during the quarter. The amount reported is gross, i.e., without regard to repayments by borrowers. The term "loans originated" covers any loan made directly by the bank. In addition, in the case of syndicated loans, the bank only reports its share. Also, with respect to overline agreements, loans made during the quarter by a correspondent of the bank to one of the bank's customers are considered loans originated by the bank. "Loans originated" does not include loans purchased from others. All loans sold during the quarter are included **except** the following: (1) residential mortgage loans; (2) consumer loans, (3) renewals or rollovers during the calendar quarter of loans previously sold by the bank provided no new funds are advanced; (4) loans sold under agreements to repurchase; and (5) sales of loans that are reported as borrowings. **(†)—** Data provided by the Federal Deposit Insurance Corp., Washington, D.C. **(a)—** Bank was created on 7/30/88 by the FDIC when 40 bank subsidiaries of the former First RepublicBank Corp. were merged into one institution. **(b)—** On 7/21/89, the FDIC merged the bank and 23 other bank affiliates of the former Texas American Bancshares into Texas American Bridge Bank NA, a newly chartered bank. **(c)—** The bank— formerly known as Deposit Insurance Bridge Bank NA— was formed by the FDIC on 3/29/89 through the merger of 20 former MCorp banks taken over by the FDIC. The bank assumed its current title on 7/5/89.

A Magic Number From Fed Brings Accord on Capital

By BARBARA A. REHM

NEWS ANALYSIS

WASHINGTON – Federal Reserve Board Chairman Alan Greenspan initially tried to get Comptroller of the Currency Robert L. Clarke and Federal Deposit Insurance Corp. Chairman L. William Seidman to end a bitter battle over capital rules by proposing that banks maintain equity capital equal to at least 4% of assets. That effort failed. Mr. Clarke stuck by his 3% common-equity standard, and Mr. Seidman held fast to his 6% mixed-capital ratio.

But now the Fed has come up with a solution worthy of Solomon – a compromise that enables both sides to argue that the central bank has sided with them.

Both Mr. Clarke and Mr. Seidman have accepted the Fed's proposal, floated last week, to set minimum equity-capital levels for well-run banks at 3% of total assets.

Ironically, what they have agreed to is not much different than Mr. Green-

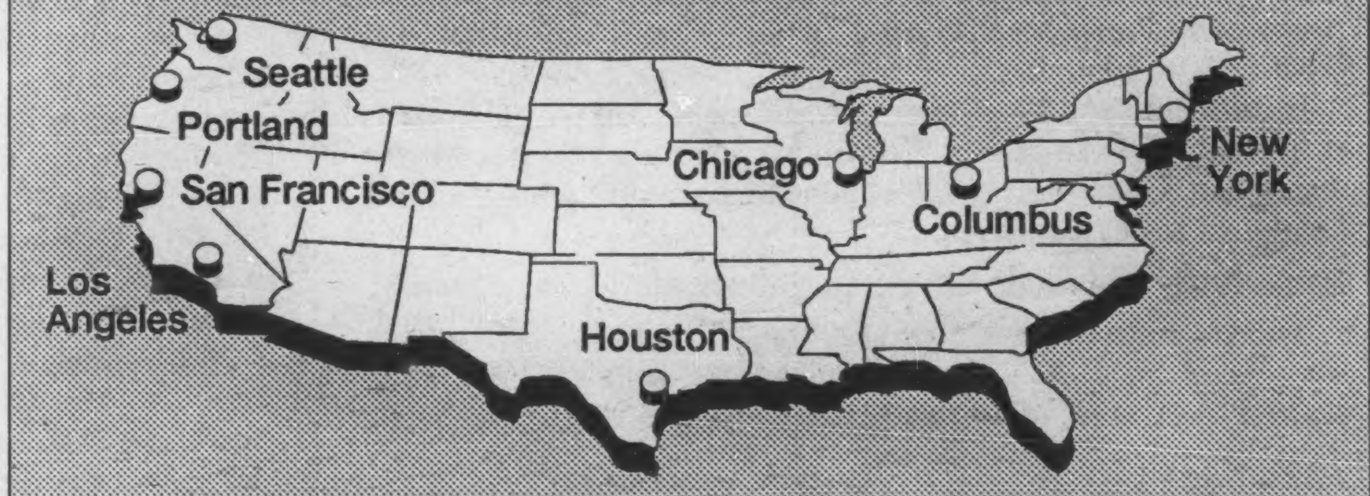
The Growing U.S. Presence of a Japanese Giant

Mitsubishi has subsidiaries and offices in the cities shown. Its twin pillars are the San Francisco-based Bank of California and Mitsubishi's New York branch.



Mitsubishi Builds U.S. Network

By JAMES R. KRAUS

NEW YORK — Among Japanese banks, Mitsubishi Bank is only the fifth largest. But in the U.S., where Japanese banks are planting deeper and deeper roots, Mitsubishi is already ahead of the pack.

Mitsubishi has quietly put together a coast-to-coast U.S. banking network offering both consumer and corporate finance.

"Our most important market outside Japan is the United States," Hisaya Nara, a deputy president of Mitsubishi in Tokyo, said in an interview.

In two moves that indicated the bank's growing U.S. presence, Mitsubishi this year set up a North American headquarters in New York and became the first Japanese bank to list its shares on the New York Stock Exchange.

To further expand its U.S. business, Mitsubishi is actively recruiting experts in specialized areas of finance.

The bank is also planning to open branches, most likely in Atlanta and Midwestern states, to serve Japanese corporate customers and expand lending to large local corporations.

Mitsubishi's expansion in the United States comes as deregulation is just getting under way in Japan. The bank hopes to gain experience in deregulated markets here that can be applied at

Fed Pressure Dims Prospect Of Cut in Prime

Central Bank Pushes Up Rate for Federal Funds

By ROBERT TRIGAUX

WASHINGTON — Widespread expectations of a cut in the prime rate were dashed Monday after the Federal Reserve Board moved to tighten credit.

The Fed drained reserves from the banking system, with the effect of bumping the borrowing rate for excess reserves, known as federal funds, up to 8.44% by midday. The rate averaged 8.30% on Friday. Fed watchers had cited since Wednesday signs of loosening by the central bank and had widely predicted a resulting drop in the prime by half a percentage point to 10%.

"There's been a lot of confusion about what the Fed has been up to since last Wednesday," said Ward McCarthy of Stone & McCarthy, economic advisers in Princeton, N.J. "Today, the Fed seems to have put the kibosh on interpretations it is using monetary policy to reduce rates. Therefore, there seems no immediate cause for banks to cut the prime."

But economists still expect a gradual slide in interest rates – at least through the first quarter of 1990 – though they say banks will continue to delay cutting the prime for as long as possible.

"It's pretty typical of a declining interest rate environment for banks to be slow on the draw to adjust to market rates," said one West Coast bank economist. "Banks want to have margins widen out, in part because the economy is slowing," he said.

"Regulators are leaning on banks to try and spruce up their capital adequacy," added Mr. McCarthy. One way to

Rising Rates Drive Down Correspondent Balances by 10.5%

By L. MICHAEL CACACE

NEW YORK – Rising short-term interest rates in the year ended June 30 prompted a sharp drop in correspondent balances at the nation's largest commercial banks, according to an *American Banker* survey.

The balances, which are left on deposit to pay for operating services, declined by 10.5%, to $36.3 billion, in the 12 months ending at midyear 1989. The drop was much steeper than the 2% and 1.7% declines, respectively, in the two preceding years.

The survey also found that correspondent deposits made by domestic banks, which comprise 73% of the total, decreased at roughly the same rate as the deposits of foreign banks. The *American Banker's* 27th annual study of correspondent balances surveyed the 229 banks with $25 million or more in demand deposits due other banking companies on June 30.

Correspondent banks provide a variety of operating services to smaller institutions, called respondent banks. These services include check collection, federal funds trading, wire transfers, securities safekeeping, coupon collection, and commercial letters of credit.

Respondent banks pay for these services by maintaining demand deposits

Nyce and Mac Lead in ATMs, but Survey Shows Star System Is Rising

By YVETTE D. KANTROW

NEW YORK — Nyce and Mac remain the two largest automated teller machine networks, but the California-based Star System is in third place and closing fast, according to the latest ranking of regional networks published by *Bank Network News*.

The New York Cash Exchange handled 54.6 million transactions in September, when *Bank Network News* took its annual snapshot of the electronic banking industry. It was 26% bigger than its closest rival, CoreStates Financial Corp.'s Mac system, which had a monthly volume of 43.4 million.

The study by the Chicago-based newsletter also showed that Bank of America, which long owned more automated teller machines than any other bank, fell behind Citicorp and Security Pacific National Bank this year. Citicorp led the list with 1,600 machines, followed by Security Pacific, with 1,557 and Bank of America, with 1,552.

Nyce and Mac, whose volumes grew over the past year by 35% and 39% respectively, had a comfortable lead over third-place Star, which registered 34.2 million transactions. But thanks to a deal with Bank of America, Star is poised to leapfrog Mac and claim the No. 2 spot in the country, a relatively short distance from No. 1 Nyce.

Bank of America Boosts Star

In 1988, Bank of America agreed to bring most of its ATMs into Star. If those machines were on-line, San Diego-based Star System Inc. would have handled about 50 million transactions in September – only 4.3 million less than Nyce.

Despite Star's growth potential and Nyce's consistent performance, the Mac network is, and most likely will remain, the national leader in switched transactions – those that flow between participating financial institutions. In September, Mac's central switch handled 41.8 million transactions – nearly four times the 10.5 million transactions switched by BayBanks Inc.'s XPress24, its closest rival switch. Mac's switch volume grew 89% in a year, making it the fastest-growing switch operator in the nation.

The Mpact network, a Texas-based system owned by Electronic Data Systems Corp., has the third most active switch at 9.9 million monthly transactions.

Switch volume is considered a key measure of shared networks' performance, since the networks are compensated for these transactions with interchange fees. Mac is one of the few networks that collects switch fees on almost all its transactions.

"If we add Bank of America's proprietary transactions to ours, it will make our volume very high," said Rita Champ, vice president in charge of marketing at Star System Inc. "But that's not what constitutes network growth." True growth, she said, is a function of switch volume and cardholder base.

Bank Network News, in its 1990 "EFT Network Data Book," said the top 100 shared networks switch more than 220 million transactions a month – 25% more than in 1988. In addition, all electronic funds transfers in the United States – including all shared and proprietary, ATM and point-of-sale debit systems – grew 15% in 1989. That is the highest growth percentage since 1984, when volume was up 30%, the newsletter said.

But industry insiders say they are not expecting to maintain that kind of growth rate indefinitely.

"There is going to be a ceiling," said Stephen S. Cole, president of Cash Station Inc., a Chicago-based ATM network. "Networks like ourselves are now looking at whether or not we should be something more than an ATM network. Should we be positioning ourselves as a consumer payments system?"

Cash Station saw its switch volume grow 63% in 1989 – a growth rate second only to Mac's. The Illinois network switches 6.7 million transactions a month. According to Mr. Cole, more than 100 financial institutions joined Cash Station during the past two years. He attributed that growth to the system's merger with the Money Network, another Chicago-based EFT switch. ■

COMMENT

Bracing for Another Decade of Change

By HENRY KAUFMAN
President, Henry Kaufman & Co.

WHAT developments are likely in our financial system, where so much has already transpired in the present decade? We have already been inundated with globalization, securitization, deregulation, and myriad new credit instruments.

Yet, additional far-reaching changes are likely in the 1990s. These will include the following:

- Remaining geographic and business-activity barriers will be removed early in the 1990s. Differences among types of financial institutions, with the exception perhaps of insurance companies, will vanish during the decade.

While there will remain a few prominent institutions – primarily regional in character – that will choose to specialize in traditional commercial or investment banking, by the end of the century the U.S. financial system will move decidedly toward the universal banking model.

- The number of all types of financial institutions will be drastically reduced in the next 10 years through successive waves of mergers and acquisitions. In this process, a number of major regional institutions will be constructed that will rival in size and prominence the largest money-center banks that now exist.

- The thrift industry debacle will turn out to be far more expensive and difficult to resolve than is now admitted. Its full impact on housing, on the restructuring of institutions, and on regulatory practices is still ahead.

> 'The thrift industry debacle will turn out to be far more expensive and difficult to resolve than is now admitted.'

In the first half of the 1990s, many traditional providers of mortgage financing will be permanently out of the market. Their role in providing credit to housing will have to be picked up by other lending institutions.

In dealing with ailing thrift institutions, the regulators will enforce stern limitations on their activities that will effectively immobilize them. The impact will be to create considerable uncertainties in the entire mortgage area, including the secondary markets in mortgage-related instruments.

- Because of the wide range of activities in which financial institutions will be involved, in terms of both lending and investments, the application of strict capital requirements will be more important for all of them. But effective risk oversight by supervisory bodies will, I believe, remain elusive.

- The progress toward harmonization of international regulatory procedures will be extended from banking to the securities and financial futures markets. But these efforts, for most of the decade, will run well behind events and the continued rapid evolution of market practices. The parallel movement toward consolidation in Europe, as part of the integration efforts in the European Community, will result in various forms of both formal and loose amalgamations of U.S. and European financial complexes.

- While some shifts in corporate financing patterns are likely, the outcome will still involve a further deterioration of credit quality. The shift from equity to debt financing will persist, and so will the shift to short- and medium-term financing.

Bankrolling the Mergers

The financing of mergers and acquisitions and leveraged buyouts will take a new turn. Instead of the plethora of new high-yield bond issues offered through the public market, much more financing will be consummated directly with major financial institutions such as banks and insurance companies.

These lenders will not be able to resist the high profit margins in these transactions, especially if they can participate in a bigger share of the equity base. And initiatives such as the new Rule 144A proposal tend to promote that relative shift toward private placements. Incidentally, the heavy debt positions of U.S. corporations will slow the much-needed corporate expansion in physical assets in the 1990s.

- The process of securitization of credit, which has been going on for some 15 years now, will reverse by the end of the 1990s. This is because of the interplay of two factors.

First, the consolidation of the financial system will create large financial organizations capable of offering financial services that will be competitive with capital market alternatives. Second, the erosion of credit quality, particularly in nonfinancial corporations, will leave them more dependent on bank financing. Incidentally, the securities firms, as we know them, will be squeezed by this reversal.

- U.S. government finance will undergo subtle changes. Conventional

Crime Blotter

By TOM LEANDER

Keep Subpoenas Quiet, Bank Personnel Warned

The thrift-bailout law makes it a crime for bank employees to tell customers that their accounts have been subpoenaed by a grand jury, warns Charles M. Carbury, former chief of the securities and commodities fraud unit at the Justice Department.

Charles Carbury

Bank personnel were previously free to tell a customer that information had been subpoenaed, unless disclosure was blocked by a court order. In fact, such disclosure was previously considered a courtesy in many situations, according Mr. Carbury, a partner at Jones, Day, Reavis, and Pogue, New York.

Mr. Carbury warns that customer-service personnel unaware of the change may unwittingly violate the law.

Increase in ATM Security Found Since '87 Survey

Banks have boosted their ATM security measures in the past two years, according to a just-released American Bankers Association survey on ATM crime.

Ninety-three percent of the 873 banks in the 1989 survey had alarm systems in automated teller machines. In addition, 75% had surveillance cameras, and 70% had installed so-called secure enclosures – kiosks that customers unlock with bank cards.

Two years ago, when the ABA quizzed 961 banks on the same topic, the same percentage of the banks said they had ATM alarm systems. But only 51% had surveillance cameras and only 38% had secure enclosures.

Disarming Cashier Tames Desperate London Robber

A knife-wielding bank robber in London released 13 hostages and surrendered to police after a cool-headed bank cashier convinced him to give up.

The incident started when Wayne Hood, an unemployed mechanic from north London, walked into a branch of the National Westminster Bank and held up a teller.

But police surrounded the building after someone touched off a silent alarm. Mr. Hood forced 12 bank employees into an air-tight storeroom and began a three-hour standoff.

Helen Mudge, a 24-year-old cashier at the bank, was among the hostages. She convinced the thief to let the 12 other hostages go, then asked him to turn himself over to police, according to reports in the London *Daily Telegraph*.

Gang Uses U.S. Banks For Foreign Fraud

Three U.S. banks reportedly were unwitting parties to a $360 million foreign exchange scam uncovered earlier this month in Brazil.

The scam, used repeatedly to pyramid higher and higher profits, worked like this:

In Brazil, a dummy company operated by the ring obtained an import permit from the government bureau of foreign trade. Meanwhile, another phony company operated by the ring in the United States had phony invoices and bills of lading sent to a Brazilian bank by unwitting American banks.

The dummy Brazilian company paid for the bogus exports in Brazilian cruzados. The Brazilian bank converted them to dollars at a special exchange rate allowed for authorized importers, which is about half the market rate.

After the Brazilian bank sent the dollars to the dummy U.S. company, the funds were transferred back to Brazil. Ring members sold the money on the Brazilian black market at a rate considerably above the market rate.

Brazilian authorities say Manufacturers Hanover Trust Co., Bank of New England, and First New York Bank for Business were among the U.S. banks that were unwitting parties to the scam. A Manufacturers official declined comment; officials from Bank of New England and First New York could not be reached. ■

Data Source: American Banker questionnaire. Data for all FDIC-insured banks were checked against the Federal Regulatory Report of Condition. For non-reporting banks, data were provided by **ADP Data Services Division, New York,** from their "Bancall" data base. **Total correspondent balances** is the sum of domestic correspondent balances and foreign correspondent balances. **Domestic correspondent balances** are domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other commercial banks in the U.S. **Foreign correspondent balances** are domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Edge Bank clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. For non-reporting banks, Edge data were provided by the Federal Reserve Board, Washington D.C. **Time and savings deposits due to all banks** are nontransaction accounts due all domestic and foreign banks, as defined above. **(a)**— Merged into Bank of New York on 10/6/89. **(b)**— On 10/31/88, California First Bank merged Union Bank, Los Angeles and changed title. Data for 6/30/88 are for California First Bank. **(c)**— The bank was created on 7/30/88 by the FDIC when 40 bank subsidiaries of the former First RepublicBank Corp. were merged into one institution. Data for 6/30/88 are for First RepublicBank Dallas NA. **(d)**— The bank— formerly known as Deposit Insurance Bridge Bank NA— was formed by the FDIC on 3/29/89 through the merger of 20 former MCorp banks taken over by the FDIC. The bank assumed its current title on 7/5/89. Data for 6/30/88 are for MBank Dallas NA. **(e)**— Formerly known as Savings Banks Trust Co. **(†)**— Revised to include Edge bank data. **(‡)**— Revised for reporting error by bank.

Data Source: American Banker questionnaire. Data for all FDIC-insured banks were checked against the Federal Regulatory Report of Condition. For non-reporting banks, data were provided by **ADP Data Services Division, New York,** from their "Bancall" data base. **Total correspondent balances** is the sum of domestic correspondent balances and foreign correspondent balances. **Domestic correspondent balances** are domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other commercial banks in the U.S. **Foreign correspondent balances** are domestically-booked demand deposits due other banks in foreign countries; domestically-booked demand deposits due foreign government and official institutions; and clearing balances in the bank's domestic Edge bank subsidiaries. **Edge Bank clearing balances** are the sum of transaction accounts due foreign government and official institutions; transaction accounts due commercial banks in the U.S.; and transaction accounts due banks in foreign countries. For non-reporting banks, Edge data were provided by the Federal Reserve Board, Washington D.C. **Time and savings deposits due to all banks** are nontransaction accounts due all domestic and foreign banks, as defined above. **(a)**— A newly chartered bank created by the FDIC on 7/21/89. It was formed by the merger of 24 banks of the former Texas American Bancshares. Data for 6/30/88 are for the former Texas American Bank/Fort Worth NA.

Rising Interest Rates Drive Correspondent Balances Down 10.5%

▸ Continued from Page 15

all decline in the correspondent banking market and the substitution of fees for compensating balances as the primary method of payment for some correspondent services.

The correspondent banking market weakened for various reasons, including heavy merger activity of the mid-1980's, which reduced the number of medium-size U.S. banks, typically the largest users of correspondent services.

In the thrift segment of the market, increased competition from regional Federal Home Loan banks and other thrift institutions reduced the demand for correspondent services.

In addition, capital pressures at thrifts made the payment of fees for correspondent services preferable to balances. And foreign banks began to rely more and more on their own branches and affiliates in the United States for their correspondent services.

Other Survey Findings

- Citibank, New York, remained the top bank in total correspondent balances with $2.3 billion on June 30, 1989, down 25% from the year before. And it also held on to the top spot in foreign correspondent balances with $1.6 billion, down 14%.
- Bankers Trust Co., New York, again was the top bank in domestic correspondent balances with $1.1 billion at midyear, down 34%. Spurred by a 20% gain in foreign correspondent balances, Bankers Trust now ranks second to Citibank in both foreign and total correspondent balances. The bank's foreign correspondent balances totaled $1.15 billion at midyear, up from $961 million a year earlier, when it ranked fifth; and its total correspondent balances totaled $2.2 billion, down from $2.6 billion a year earlier, when it ranked third.

Bankers Trust initiated a strategic plan four years ago to develope its correspondent business, or global operating and information services. Since implementing of the plan, Bankers Trust has moved up in the rankings. On June 30, 1985, Bankers Trust ranked 18th in domestic correspondent balances with $369 million; fifth in foreign balances with $605 million; and seventh in total balances with $974 million.

- The largest gain in total correspondent balances that was not merger-related was posted by the three-year old Sumitomo Trust and Banking Co. USA, New York, a subsidiary of Sumitomo Trust and Banking Co. Ltd., Osaka, Japan. Its balances, all of which are demand deposits due foreign banks, jumped up 186% to $120.1 million at midyear from $41.9 million the year before. According to Robert Bielunas, a vice president at the bank, "the gain was attributable to the growth in the bank's custody business."
- According to one analyst, Sumitomo is following a pattern established by other Japanese banks in the U.S. It establishes a subsidiary; learns the business, which in this case is securities custody and safekeeping; and then has its Japanese customers switch from other banks in the U.S. to its new affiliate.
- Bank of America, San Francisco, is now the largest bank in thrift correspondent balances, moving past two other California-based banks: Union Bank, San Francisco, and Security Pacific National Bank, Los Angeles. Bank of America's thrift correspondent balances totaled $334 million on June 30, up 79% from $187 million a year earlier.

Union Bank dropped one notch to second place this year with $231.2 million in deposits, down 33%. And Security Pacific is now fifth with $146.9 million in these balances, down 24%.■

Correspondent Balances at All U.S. Banks

(Dollars in millions)

	6/30/89	6/30/88	% Chg.
Demand deposits due other U.S. commercial banks[1]	25,410	$29,208	-13.0%
Demand deposits due other U.S. depository institutions[1]	5,115	5,507	-7.1
Total domestic correspondent balances[1]	30,525	34,715	-12.1
Foreign correspondent balances in U.S. banks[1]	8,507	9,989	-14.8
Foreign correspondent balances in Edge banks[2]	1,461	1,518	-3.8
Total foreign correspondent balances	9,968	11,507	-13.4
Total correspondent balances:	$40,493	$46,222	-12.4

Stemmer Leaves Unicorp, Subsidiary

By PHIL ROOSEVELT

NEW YORK — Wayne J. Stemmer has resigned as president of Unicorp American Corp. and its thrift subsidiary, Lincoln Savings Bank, New York.

Mr. Stemmer said shifts by both Unicorp and Lincoln away from his specialty, real estate investment, "make this an appropriate time for me to resign." He had been president of Unicorp American for six years.

Unicorp American has made a strategic decision to withdraw from real estate investing, while the thrift-bailout law has posed obstacles for a real estate unit of Lincoln.

"The emphasis for the company and the bank going forward necessarily has shifted toward more traditional real estate lending activities," Mr. Stemmer said.

Unicorp said Thomas V. Ogletree, chief financial officer of both Unicorp and Lincoln, has been named president and director of the thrift and a director of the parent company. ■

Priorities!
Yours is profitability
Ours is helping you increase it

The hurdles you face in today's tough, fast-changing environment are formidable. We know them. We know too that your needs don't fit a formula — that there are no set solutions to turn obstacles into opportunities . . . and opportunities into profits. It takes a unique commitment to success, one as strong as your own. It takes Nationar.

For over half a century, we've focused our ability and energy on one objective: increasing the profitability of companies in the financial services marketplace. We've done it by anticipating the changes and challenges that impact your bottom line. And by responding to those challenges with proven solutions and creative new approaches.

We can help you: Turn idle balances into profit-enhancing investments — Speed payment processing to make the float advantage yours — Turn lost data processing time into profit-making time — Tailor trust programs for investment growth and asset protection — Provide real time cash movement information for more effective funds management. And a great deal more.

Whatever the hurdles you face, we have the strength of knowledge, resources and service to overcome them and create new opportunities. When your top priority is profitability, at Nationar, ours is helping you increase it. Call Bill Sheluck, President and Chief Executive Officer at (212) 551-1801.

Data Source: American Banker questionnaire. Data for all FDIC-insured banks were checked against the Federal Regulatory Report of Condition. For non-reporting banks, data were provided by **ADP Data Services Division, New York,** from their "Bancall" data base. **Domestic correspondent balances** are demand deposits due U.S. banks and include: domestically-booked demand deposits due to other depository institutions in the U.S. (thrift institutions) plus domestically-booked demand deposits due to other commercial banks in the U.S. **Time and savings deposits due to domestic banks** are nontransaction accounts due domestic banks and thrifts. **(a)**— On 10/31/88, California First Bank merged Union Bank, Los Angeles and changed title. Data for 6/30/88 are for California First Bank. **(b)**— The bank was created on 7/30/88 by the FDIC when 40 bank subsidiaries of the former First RepublicBank Corp. were merged into one institution. Data for 6/30/88 are for First RepublicBank Dallas NA. **(c)**— The bank— formerly known as Deposit Insurance Bridge Bank NA— was formed by the FDIC on 3/29/89 through the merger of 20 former MCorp banks taken over by the FDIC. The bank assumed its current title on 7/5/89. Data for 6/30/88 are for MBank Dallas NA. **(d)**— Formerly known as Savings Banks Trust Co. **(e)**— Merged into Bank of New York on 10/6/89. **(f)**— A newly chartered bank created by the FDIC on 7/21/89. It was formed by the merger of 24 banks of the former Texas American Bancshares. Data for 6/30/88 are for the former Texas American Bank/Fort Worth NA.

Banks Say No Deal To SIA's Proposal, Citing Imbalances

By ROBERT M. GARSSON

NEWS ANALYSIS

WASHINGTON — The Securities Industry Association's Glass-Steagall initiative falls far short of creating the two-way street that seemed to be in the offing last week, banking groups said Monday.

"We would hope they aren't proposing to replace the Berlin Wall with a high-powered electrical fence," said Edward L. Yingling, executive director for government relations at the American Bankers Association.

Mr. Yingling said early reports of the SIA's proposal were disheartening. "While we are encouraged that they recognize the Glass-Steagall Act is badly out of date," he said, "we have real concerns with what appears to be the alternative they offer."

In its proposal, announced Friday in Boca Raton, Fla., after a week of highly visible news accounts, the association in effect asked that it be given access to the most valuable parts of the commercial banking franchise. But it was vague on the powers it would offer banks in return.

Indeed, the trade group did not even call for repeal of the 1933 Glass-Steagall Act, which established a barrier between the commercial and investment banking industries.

Donald J. Crawford, the SIA's senior vice president for government relations, said the trade group contemplates that, "as part of the legislative process," banks will be given the same underwriting authority brokerage firms now enjoy.

"Glass-Steagall was literally never discussed" by the trade group's board, he said. "We never got down to decid-

Wall Resigns, Says He Was a Scapegoat

Wall's Short Tenure

- **July 1, 1987:** Becomes nation's top thrift regulator.
- **Summer 1988:** Faces growing criticism on Capitol Hill for underestimating the cost of bailing out the S&L industry.
- **December 1988:** Rushes through 24 yearend sales of insolvent thrifts, committing government to billions in tax benefits and guarantees.
- **Nov. 21, 1989:** Testifies before House Banking Committee that he did not improperly delay Lincoln S&L's closing, which now may cost government more than $2 billion.
- **Dec. 4, 1989:** Announces resignation.

Regulator Faced Eroding Support

By JIM McTAGUE

WASHINGTON — With his political support deteriorating rapidly, M. Danny Wall resigned Monday as director of the Office of Thrift Supervision.

Claiming that Congress had made him the scapegoat for the nation's thrift debacle, Mr. Wall said he plans to leave the agency after a successor takes over. The Treasury Department, which oversees the thrift regulatory agency, has begun seeking a replacement.

Mr. Wall's departure came after House Banking Committee hearings this fall that had focused on his handling of the $2 billion failure last April of Lincoln Savings & Loan Association, Irvine, Calif.

As recently as last week, Mr. Wall said he had no immediate intention to quit. His reversal surprised his staff at the OTS, who were not told until Monday morning.

"We don't run from a fight where I come from," Mr. Wall wrote in a letter dated Dec. 4 to President Bush. "But I am not willing to stand and fight at the expense of the goals of your administration or the achievements that have been accomplished at both the Federal Home Loan Bank Board and the Office of Thrift Supervision by me and all the people who have served with me."

Mr. Bush had not asked him to step down, the thrift chief added.

Mr. Wall's job performance became a frequent topic of conversation among Washington insiders, and editorials in some of the nation's largest newspapers demanded that he resign. He had been the nation's top thrift regulator since July 1987, when the agency was known as the Federal Home Loan Bank Board.

Lincoln Probe Spreading to Other S&Ls, Including One Connected to Bush's Son

By JIM McTAGUE

WASHINGTON – Fallout from the $2 billion Lincoln Savings and Loan scandal, already one of the biggest and messiest in financial history, is drifting toward the White House.

Federal regulators are investigating suspicious transactions involving Lincoln and several other thrifts, including one where Neil Bush, the President's 34-year-old son, was a director, regulatory sources said.

Thrift regulators, the Federal Bureau of Investigation, and the Securities and Exchange Commission are investigating whether the seven thrifts, six of which have failed, were engaged in a giant shell game, hiding questionable loans from regulators by shuffling the credits among themselves.

The thrifts are also suspected of inflating their assets by selling billions of dollars of junk bonds to each other at escalating prices. Drexel Burnham Lambert Inc., which is said to have received millions of dollars in fees for valuing the bonds and for arranging the transactions, is also being investigated. Drexel declined to comment.

The House Banking Committee, which has been holding hearings on Lincoln's demise, also has gathered information about the inter-thrift transactions, and committee Chairman Henry B. Gonzalez, D-Tex., reportedly is ready to pursue the leads, especially the ones involving the now-defunct Silverado Banking, a $2.4 billion Denver

COMMENT

Hitch in Thrift Law Shoots Down Collateral Deals

By **JOHN B. CAIRNS**
and **WHITNEY HOLMES**
Willkie Farr & Gallagher

A little-noticed provision of the new thrift-bailout law threatens the ability of banks and thrift institutions to provide satisfactory collateral for their obligations. The provisions of the law apply broadly to all transactions in which banks must provide collateral.

The law gives the Federal Deposit Insurance Corp. far broader ability to seize and liquidate assets of failed institutions than was previously the case. It may now recover assets even if they have been pledged as collateral to a third party, except under certain narrow conditions.

The situation arises because the scope of section 13(e) of the Federal Deposit Insurance Act has been expanded by Title II of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

Provisions Are Stronger

Section 13(e) now invalidates any agreement that "tends to diminish or defeat" the interest of the FDIC as receiver of the assets of banks and thrifts unless the following conditions are met: the agreement is in writing, was executed "contemporaneously" with the acquisition of the assets provided as collateral, was approved by the institution's board or loan committee, and was continuously an official record of the institution.

Formerly, section 13(e) applied only to agreements relating to assets acquired by the FDIC by purchase or as collateral for an assistance loan.

Until Congress or the FDIC fixes this problem, it is doubtful that lawyers can offer unqualified opinions on the enforceability of collateral agreements against the FDIC. Without a clean opinion, securities that depend on an investment-grade rating may prove to be unmarketable.

Banks almost always use their existing assets as collateral rather than acquiring new assets for the purpose. Thus, virtually every potential collateral agreement would be affected by the new law.

Section 13(e) generally has been viewed as permitting the FDIC to take assets of a failed bank free and clear of secret side agreements. However, that section applies regardless of secrecy or fraudulent intent. The courts have insisted on strict compliance with those requirements, and the decisions provide little comfort that application of the section can be limited to secret side agreements. The problem infects many common transactions.

For example, if a bank sells assets to a trust and agrees with the trustee to repurchase these assets under certain circumstances, it often collateralizes its repurchase obligation by granting the trustee a security interest in other existing assets. Under section 13(e), the trustee's right to liquidate the collateral would not be valid if the FDIC were to be appointed receiver.

Even if the collateral was acquired when the agreement was executed, any additions to collateral because of market fluctuations would not be protected, nor would any substitutions.

Consider also an ordinary repurchase transaction. If a bank sells securities under a repurchase agreement, and if the transaction is viewed as a secured loan to the bank – as it generally is – section 13(e) would invalidate the repurchase agreement upon the FDIC's appointment as receiver.

The contemporaneous acquisition requirement, and the resulting overcollateralization to protect against market risk, will render most transactions economically unfeasible.

Even if the acquisition requirement is met, secured creditors must be concerned with another requirement beyond their control: the agreement must be maintained continuously as a record of the institution. A secured creditor can do little to assure itself that this requirement will be satisfied.

The implications of section 13(e) are not limited to collateralized bank and thrift obligations. Other provisions of the thrift law interact with the section to create uncertainties for many common transactions.

Many Transactions Involved

For example, the protections against seizure by the FDIC that are provided in the new law for "qualified financial contracts" are contingent to some extent on compliance with the requirements of section 13(e). Included in this definition are many ordinary transactions, such as sales of securities, commodities, or other forward contracts.

Also, section 11(d)(9) of the Federal Deposit Insurance Act, as amended, provides that an agreement may not

Consultant Offers Tips On Avoiding Risk Abroad

The terrorist bombing last week that killed a prominent West German banker has renewed interest in security measures to protect U.S. bankers overseas.

Don Walker, an expert on corporate security, offers a number of pointers for banks seeking to bolster protection for executives stationed abroad.

Don Walker

- A careful assessment of the prospective country's risk level should be carried out by a consultant. A consultant can also provide strategic defense information such as the most common assassination methods used by local terrorist groups and names of contacts among foreign police and embassy staffs.
- U.S. banking executives should avoid being conspicuous in foreign countries. They should drive in automobiles manufactured locally, and reserve airline tickets without reference to their position.

Mr. Walker's Nashville-based firm, Business Risks International, has advised over 60 banks on corporate security. Foreign risk assessments also are offered by Kroll Associates, a New York investigation firm, and London-based Control Risk.

Suspect Nabbed in Wiring Of Bank Teller with Bomb

A man accused of abducting tellers and forcing them to rob banks has been apprehended by Pennsylvania police.

Ralph Stephen Gambin, 42, has been indicted in Pennsylvania in connection with the robbery of a Security Pacific National Bank branch in Torrance, Calif., last year. Mr. Gambin is accused of kidnapping a bank teller, strapping explosives around her waist, and forcing her to steal $410,000 from the bank branch where she worked.

The FBI said it suspects Mr. Gambin and two accomplices of also breaking into the Buena Vista, Calif., apartment of a bank teller and holding her family hostage while they forced her to return to the bank where she worked and steal $190,000.

The FBI also suspects Mr. Gambin and his accomplices of three other California bank heists involving the kidnapping of tellers. Their combined robberies netted them almost $1 million, according to Jim Neilson, a spokesman for the Los Angeles Federal Bureau of Investigation.

NCNB Visa Holders Billed For X-Rated Phone Calls

Visa customers of NCNB have been hit by a nettlesome fraud: phony charges from a California dial-a-porn service.

The Charlotte, N.C.-based bank has received 25 to 50 complaint calls a month since the beginning of this year from customers saying the charges have improperly been placed on their accounts, according to Ellison Clary, a spokesman for NCNB.

Officials at NCNB's bank credit card division say that holders are not responsible for the charges, which usually do not run more than a few dollars. But each time the bank receives a complaint, it has to close an account and issue a new card – a time-consuming and costly task.

The pornographic service has been investigated by NCNB and is not connected with the fraud, the bank said.

Dallas Grand Jury Indicts Vernon S&L Customers

The collapse of Dallas-based Vernon Savings and Loan two years ago has led to the indictment of two of the thrift's biggest customers.

W.O. Rothwell and R.H. Westmoreland, both of Dallas, were indicted by a federal grand jury for conspiracy to conceal more than $815,000 in commission income from real estate transactions financed by Vernon.

SPECIAL REPORT

'Security issues will have a major impact on ATMs in the 1990s.'
– Linda Fenner Zimmer
–page 14–

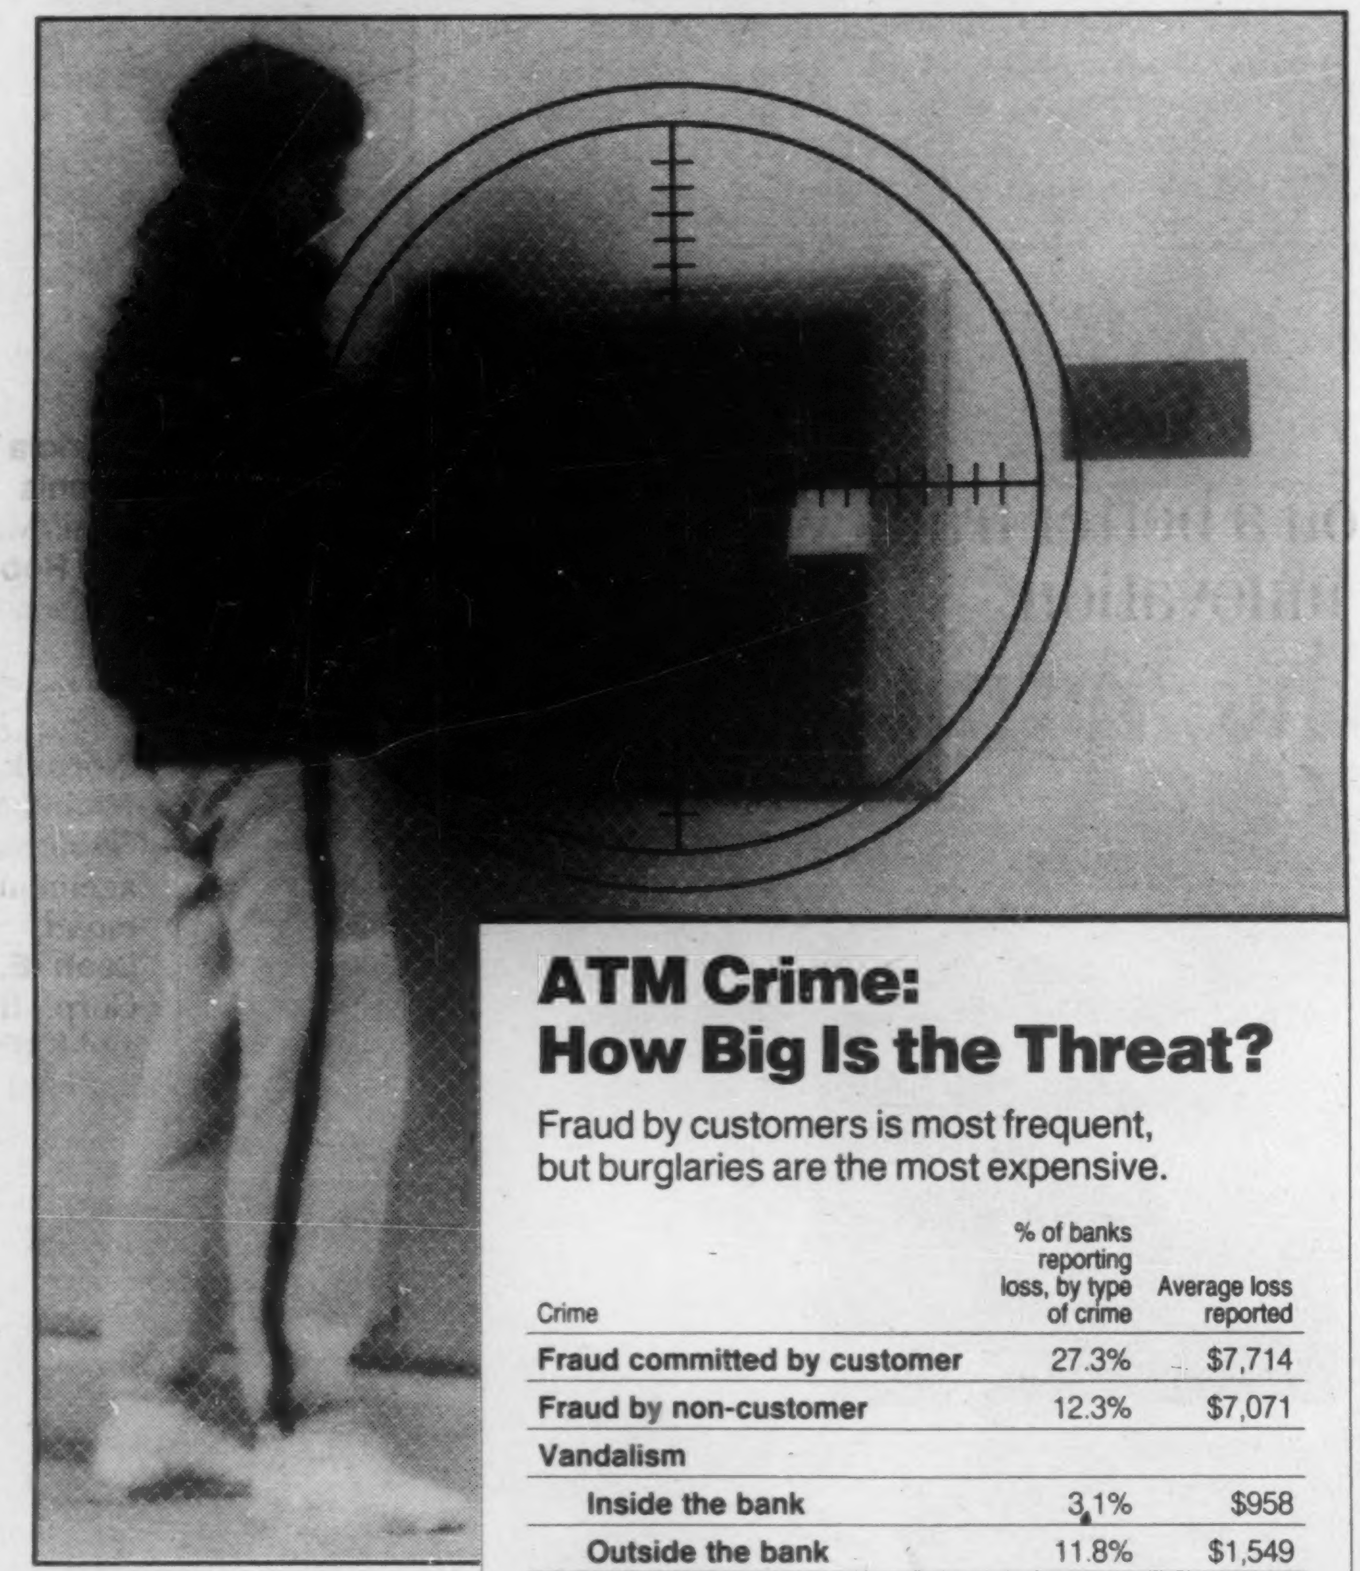
ATM *Security*

OVERVIEW

Are Automated Tellers Also Automatic Threats?

Probably not yet. But crimes related to ATM use are increasing and banks face lawsuits seeking damages. Legislation on safety, which appears inevitable, could also significantly increase costs.

By REBECCA COX



Robert Paul Molay

ATM Crime: How Big Is the Threat?

Fraud by customers is most frequent, but burglaries are the most expensive.

Crime	% of banks reporting loss, by type of crime	Average loss reported
Fraud committed by customer	27.3%	$7,714
Fraud by non-customer	12.3%	$7,071
Vandalism		
Inside the bank	3.1%	$958
Outside the bank	11.8%	$1,549
Off-site	5%	$1,844
Burglaries		
Inside the bank	0	0
Outside the bank	0.7%	$4,933
Off-site	0.2%	$27,000
Criminal acts against customers		
Inside the bank	0.6%	$466
Outside the bank	3.7%	$449
Off-site	0.6%	$227

Source: American Bankers Association survey of 873 banks

WHAT began as a boon for bank customers is turning into a bane for banks as more financial institutions realize they could be held liable for crimes related to automated teller machines.

"Everyone is worried about lawsuits," says C. Howie Hodges 2d, manager of the security and risk division of the American Bankers Association. "This area is very hazy from a bank-defense point of view."

Bankers' consternation over being held liable for such crimes has increased as the possibility of new federal, state, and local laws seems more likely. Debate over possible legislation will not only draw more attention to the situation, but it could also considerably increase banks' expenses in offering ATM services. ATM crime – an issue bankers might like to ignore – could cost banks big bucks.

"Bankers are concerned," says Noel H. Nation, a partner with the law firm Baker & McKenzie, Miami. "It is a marketing issue and a consumer issue that any businessman should be concerned about."

Up to now, bank losses from ATM crime and resulting lawsuits have been limited. The number of reported robberies has been low, as have the sums lost and the threat to safety.

But crimes are perceived to be on the rise, as are potential losses to banks through lawsuits.

In one lawsuit, a Florida court awarded $1 million to a man who was shot in the face while depositing funds in a the night depository of a Barnett Bank. Lawyers say this case provides some precedent for prosecuting cases involving similar crimes at ATM sites.

Another lawsuit, brought against Cash Station and its 379 member financial institutions after the murder of a Chicago woman who was forced to withdraw funds from a local ATM, is still moving through the courts.

"The law is split in how it perceives the responsibility of a financial institution," says Mr. Nation, who represents an ATM-related trade group. "A small number of jurisdictions take the view that it will be a long day in coming before a court will impose a duty [fine] on a financial institution for a crime it did not cause.

"On the other end of the spectrum is a view in the law supported by the Barnett Bank case, where they found that prior criminal activity at a site did give rise to responsibility on the part of the bank to provide greater protection to customers."

Lawsuits can be complicated by a host of legal issues that have yet to be addressed. For example, if an ATM is located in a dangerous neighborhood, should it be closed?

If the ATM is not closed, and a customer is attacked, the bank leaves itself open for a lawsuit. But then, if the ATM is shut down, the bank could be opening itself up to a challenge from activists under the Community Reinvestment Act.

However, "in most cases the bank simply cannot be found negligent unless they disconnect their camera or let the light bulbs burn out, or show some kind of reckless disregard," says Brian Muys, a spokesman for the ABA.

Legislation at the local, state, and federal levels has attempted to answer such liability questions. Most of the legislation aims to set down guidelines for safety, including lighting, surveillance cameras, and silent alarms.

The Chicago city council, for example, contemplated passing guidelines on ATM safety after the death of the Chicago woman. But the legislation was abandoned after trade groups, bankers, and ATM networks agreed to form a task force to outline safety standards for ATMs.

Los Angeles also is considering setting lighting requirements for ATMs.

Bankers currently follow loosely defined industry guidelines on the degree of lighting needed at ATM sites and the placement of cameras, for example.

"Right now, banks are using industry standards for security that are self-regulating," says Mr. Hodges of the ABA.

The Federal Reserve Board of Governors is considering adding details on ATM usage and installation to Regulation P of the Bank Protection Act of 1969.

"Every time our security group gets together, it's a hot topic," says Mr. Hodges.

"They will probably mandate some type of enhanced standards of security," he adds. The regulation does not now address ATMs, and only outlines safety guidelines for night depositories, bank vaults, and other bank security matters.

However, Mr. Nation says he is wary of hasty legislation, which would fuel lawsuits against banks. "If a law provides a laundry list of things to be considered in connection with a site, it gives a plaintiff's lawyer the ability to say 'Ah ha, you don't have this, why not?'

"I think financial institutions are better off with evolving tort law theory, and informing the public with leaflets and envelope stuffers," concludes Mr. Nation.

Security issues were first raised when industry trade groups began studying ATM-related crimes in 1986. The studies indicated a growing problem and a need for greater security, but crime figures are sketchy at best.

The problem of identifying such crimes is compounded by the difficulty of gathering statistics and the lack of an accurate definition of an ATM crime.

Often, ATM crimes are secondary to other crimes – a robber, rapist, or kidnapper may bring his victim to a machine to withdraw funds.

"If you are accosted in your home and you happen to have an ATM card in your hand, law enforcement officers classify that as an ATM crime," says Mr. Hodges. "But from the banking perspective, it's an ATM crime only if you get hit while you are pulling the card and the money out of the machine."

Because of contention over the definition of an ATM crime (which trade

PRACTICING WHAT SHE PREACHES: Linda Fenner Zimmer is not afraid to use ATMs. "There are more humans involved, lives endangered, and harm done in bank lobbies that at ATMs."

Safety Issues Shaping Future ATMs

Banks must learn from past mistakes while there's still time, warns specialist.

BANKS have spent $3 billion on automated teller machines since the late 1960s, says payment services specialist Linda Fenner Zimmer, but they still are adrift, without goals or strategies for maximizing the payoff on that investment.

"Not enough priority has been given to ATMs and the retail side of electronic funds transfer to merit action," she says. "Corporate EFT is the hot button right now, but attention will come back to the retail side if we get some innovative approaches, leadership, strategies, and a sense of direction and purpose."

Now, network consolidation and increased attention to ATM security are giving banks an opportunity to make up for past mistakes. In an interview with *American Banker,* Ms. Fenner Zimmer discusses the implications of those two forces on the future of bank ATM services.

Julie A. Monahan conducted the interview.

Q Are the networks and the banks doing enough to insure customer safety and to protect themselves against fraud?

Ms. Zimmer: Fraud is not the concern. We can recover from fraud.

It's people and it's injuries. The banks and the networks have been slow to take action on some of the secure aspects of ATMs. As we progress and more incidents have happened, some banks have paid more attention to their locations. But there are still locations out there in dark spots with shrubs that need trimming. Banks that are active have installed phones and cameras, cut back the bushes, and increased lighting.

Q How serious a threat is ATM crime?

Ms. Zimmer: There are more humans involved, lives endangered, and harm done in bank lobbies than at ATMs, but it's the ATMs that are hitting the headlines. It's being blown out of perspective, but darn it, the industry should react by helping the consumer use common sense and perhaps even relocating their machines.

We might have to move in that direction. Maybe you won't see freestanding ATMs – at least not in the center of a parking lot. Maybe a utility will take responsibility for these off-premise machines, spread the liability, and keep it safe and secure. It could force us back to cash dispensers. It could spur individual institutions to install more machines in secure locations, such as supermarkets, hospitals, and corporations.

Q What do you think will be the major catalyst spurring the industry onward in the 1990s?

Ms. Zimmer: I suspect that security issues will have a major impact on the shape of ATMs in the 1990s. It could be that banks will want to go back – and we're hypothesizing here – to a proprietary program on-premise and join a utility or a shared program off-premise. The advantage of that is banks could go back to calling their own shots and serving their consumers and working on product differentiation but still serve the needs of the traveler.

Q What impact will continued consolidation of regional networks have on bank ATM programs?

Ms. Zimmer: This is a prime opportunity. As networks consolidate, it gives members a chance to say, "Wait a minute. I'm becoming a smaller fish in a bigger pond with less to say. Why am I in here?"

Everybody will stay in the networks, but it will be a different relationship. The networks are going to have different things to offer. There has to be more standards and fewer offerings, in my mind, if we are getting this bigger network. It's a wonderful opportunity to sit back and take a hard look at our ATM programs, especially if we're going into replacement. Almost 50% of ATM orders are for replacement machines. If we say by rule of thumb that a new machine is $30,000, then 10 are $300,000. Well, we're in tight-money times, so let's say, "Hold it. What do we want from ATMs?"

Q Are ATMs meeting the desired objectives?

Ms. Zimmer: ATMs are still not exactly profit centers at the majority of financial institutions. They are a necessary evil in the minds of senior management. One thing that could get ATMs going again would be to get top management involved again. Right now ATMs are just squeaking by on skeletal funds. Philadelphia National, Bay Banks, and Citibank are exemplary examples of what you can do. They have the strategy, top management support, the funding, and the direction.

Q Are there some bright spots for ATMs as we head into the 1990s?

Ms. Zimmer: EFTA [the Electronic Funds Transfer Association] is revamping. Maybe it will come back and provide a leadership role but the association is more promotional and education-oriented.

The ABA has established a new policy payment systems committee. Perhaps that will bring back senior management interest and involvement.

These branches and banks of the future are an intriguing spot on the horizon. Now that Mac [ATM network] is committing to it and planning to install these banks of the future, it may well play into the '90s, where we're talking about "How do I make my bank different from the bank next door with technology and self-service?" A bank may say, "I don't want the network to be able to use my statement printer. This is my service for my customer, and that's why they bank with me and not the guy across the street."

Q What new services or options do you see being added to ATMs?

Ms. Zimmer: Everybody seems to be caught up with trying to put as much as possible on one machine. They are trying to generate volume, but sometimes I think banks have not thought it through very well. They haven't thought about what they are trying to do when they put a statement printer on an ATM. If the machine is in a high volume location, anything that holds up that line is going to give you headaches. People will step out of the line and go back to the lobby or maybe elsewhere.

It seems to me the machine is vulnerable with statement printers and other options in less secure locations. Certainly you wouldn't put them on off-premise machines. You might have some of these machines loaded to the hilt in a semisecure environment. We're also going back to the branch of the future where there is a family of terminals. There is a place for bells and whistles, but I would like to see them separate, which is what Philadelphia National is doing.

Q Do you think the industry is stumbling in pricing ATM transactions?

Ms. Zimmer: ATMs and preauthorized payroll deposits are all exceptions to our paper-based checking accounts. What is EFT doing to this paper-based system? Bankers say the ATMs can print customers' last seven transactions, but the charge is $1. After seeing all these fees, it may be easier [for consumers] to go back to writing checks and using the teller in the lobby – and I do see some hints of that. We should give customers a few free rides on the statement and the balance inquiries before we charge them each month.

> 'After seeing all these fees, it may be easier [for consumers] to go back to writing checks and using the teller in the lobby.'
>
> — Linda Fenner Zimmer
> Payment Services
> Specialist

Q Do you see increasing attention to ATMs by the government?

Ms. Zimmer: The fact that California is mandating that banks provide access to their ATMs by the handicapped does not concern me, but there's this little voice in the back of my head getting nervous. Government is starting to step in more and more in the EFT/ATM environment, which [means more] restrictions. Rules and regulations multiply incredibly and add all kinds of costs, which will be passed on to consumers, who are already getting price-sensitive. The federal government is also considering security measures for ATMs. Illinois is considering licensing ATMs or shutting them down after 9 p.m. ■

Cameras at ATMs Serve Double Duty

Some function as crime deterrents, others help apprehend the criminals.

By LISABETH WEINER

SOME say one picture is worth a thousand words. But in the case of a Cleveland serial rapist, one picture turned out to be worth about 1,055 years – in jail.

And the picture that provided the clue that led to the capture, arrest and conviction of this man came from a surveillance camera at a teller machine.

A number of crimes have been solved with the cameras that record ATM transactions. In Dayton, Ohio, a transaction camera was helpful in tracking a rapist. On the other side of the coin, if a camera had been in place in 1987 at First Atlanta bank, it could have helped capture a kidnapper and killer who brought his victim to an ATM to withdraw cash.

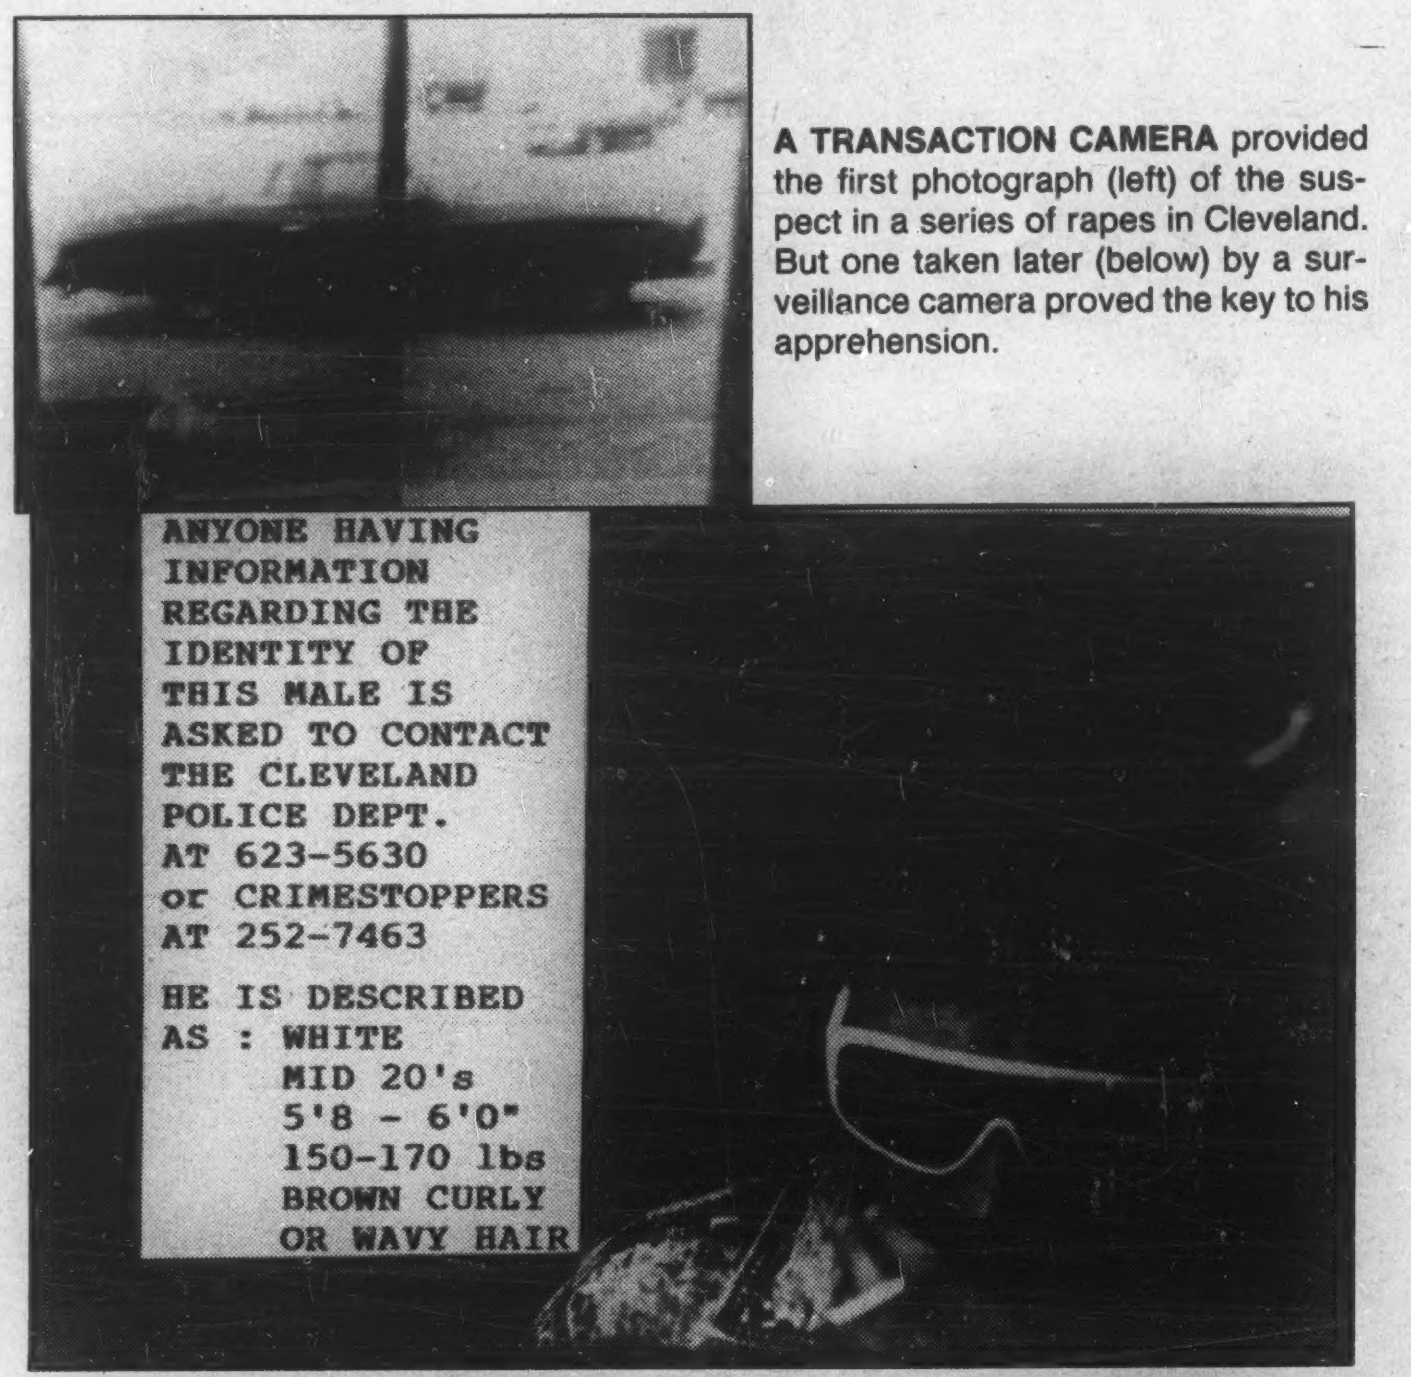
Banks are not required to have cameras at their ATM sites. But banks' responsibilities concerning the processing of what is recorded and their role in law enforcement are under increasing scrutiny. In fact, some say cameras are vital. One group of bankers is lobbying the Pulse network to raise interchange fees for sites without cameras.

But like many issues facing banks, the use of cameras for security purposes must be measured in terms of cost. Transaction and surveillance cameras can cost between $300 and $1,200, says Paul Feaser, manager of product management and marketing for Diebold Inc. of Canton, Ohio, which sells ATMs and security devices. Other estimates put the cost as high as $6,000.

Cost Is a Determinant

Many banks think the best way to deal with the problem is just to educate their customers about ATM safety. In the meantime, banks must determine where the cost of these cameras can be justified.

Boris Melnikoff of First Atlanta Bank and a spokesman for the American Bankers Association on ATM security, says at best the camera should be viewed not as a deterrent to crime but as an apprehension device.



A TRANSACTION CAMERA provided the first photograph (left) of the suspect in a series of rapes in Cleveland. But one taken later (below) by a surveillance camera proved the key to his apprehension.

Robert Dunn, who heads investigations at Ameritrust, says, "It's like anything else. A lot of times something just sits there until it's needed. And then it's very helpful."

In the Cleveland rape case, the camera was key.

For four years, 28-year-old Ronnie Shelton, a Cleveland-area resident, had been terrorizing the women of the city on Lake Erie. He broke into their homes at night and raped them.

When he first began his spree, he took any money that was available. But during the last year of his rampage, he began taking his victims' ATM cards and personal identification numbers.

Because the ATMs were such an integral part of the crimes, the Cleveland police department was able to determine the pattern to his crime.

"He really understood how to use ATMs. There were no false starts. He knew how to ask for a balance inquiry so he never overdrew the account or did anything to create suspicion," one police officer familiar with the investigation says.

And the more the rapist used the ATMs, the more proficient he got.

For instance at one point the transaction camera at an ATM he used snapped his picture.

"He was wearing a pair of sunglasses that were very large and distinctive. It was a good picture – a very narrow, very tight focus of his head and shoulders. So we distributed that to crimestoppers and his picture appeared on TV," the police officer says.

But the next time the rapist spotted a transaction camera at an ATM, he hid his face behind a newspaper.

At one point he used one machine twice. Cooperating with the police, the owner of the ATM, National City Bank, put a surveillance camera at the facility in case he decided to come back for a third time. He did not.

During all of this, the Cleveland police department learned a lot about ATMs.

First they learned that security measures are entirely discretionary and that security cameras can take many forms. In addition to being either surveillance or transaction cameras, they can be continuous or the kind that take pictures at intervals. Some cameras are obvious, designed to serve as a deterrent to crime, while others are hidden.

Cameras Are Varied

Transaction cameras are most useful in tracking down fraudulent use of the ATM. Surveillance cameras may be most helpful in areas that have problems with crime or are perceived as being unsafe.

It was a surveillance camera that helped capture Mr. Shelton.

Last October, Mr. Shelton committed a rape in early morning. At about 5 a.m., he took the bank card from his victim and drove to a nearby shopping center to use the ATM at First Federal of Lakewood, Ohio.

Unknown to him, a surveillance camera, one that scanned the outside of the facility taking pictures intermittently, photographed his car as he parked it on the street. It photographed him as he walked into the ATM lobby. Mr. Shelton put a newspaper over his face while he conducted the transaction. But the surveillance camera caught shots of the passenger side of the car as he backed into the parking lot and drove away.

The police made the connection between the pictures and the assailant based on the time of the rape and the time the victim's account was activated.

Mr. Dunn, who heads investigations at Ameritrust where the rape victim had her account, says "Several weeks after the pictures were taken, an off-duty supervisor spotted the car and got the license number. He was captured shortly after that." The rapist was convicted and is now serving a long prison sentence. ■

Are Automated Tellers Also Automatic Threats?

► Continued from Page 11

groups prefer to call an 'incident'), some bankers are playing down the impact it could have on customers. A lack of reliable statistics also makes it hard for critics to prove their fears are not just a reaction to the latest headline.

"We are always concerned about our customers' well-being, but to date we have not had any problems in this area," says John R. Hawken, director of security for Boatmen's Bancshares Inc., a $15 billion-asset bank in St. Louis. "We have had no indication that customers are worried about using ATMs."

Trade groups also try to deemphasize the frequency of ATM crimes.

"The number of incidents reported is not even a percentage point when compared with the number of transactions," says Mr. Hodges.

"People walking into a bank branch stand a better chance of witnessing a robbery than they do witnessing one at an ATM."

But, says Mary Beth Resin, assistant vice president and director of loss prevention for AmeriTrust, Cleveland, "The issue is there. It's not being ignored by any means, [but] I think what is happening is that a few incidents are getting an awful lot of attention."

One incident that generated an enormous amount of notice, and one that spurred bankers to take a closer look at security, and their liability in case of an attack, happened in Illinois last June.

A 24-year-old Chicago woman was accosted in her apartment building and forced to withdraw $400 from a Cash Station ATM before she was shot in the head. The woman, Dana Feitler, died several weeks later from the wound. Two other Cash Station users brought a class action against the network and its member banks. The suit has not been resolved.

In mid-November, a General Motors executive and his wife were murdered in suburban Detroit after they were abducted and forced to withdraw cash from an ATM.

Such violent crimes, following or preceding robberies, appear to be increasing.

In January, *The Nilson Report*, a credit card newsletter, predicted that 1,531 violent crimes – murders, muggings, robberies, rapes – related to use of ATMs would occur in the United States this year. That is an average of 4.2 crimes daily and one for every 45 machines.

At that rate, Bank of America, which owns the most ATMs, would average one violent crime every 10 days, and Wells Fargo and Citibank one every two weeks, not including crimes against service personnel, according to *The Nilson Report.*

"ATM crime on a national scale can be estimated in advance with the same degree of accuracy as the number of traffic accidents over a holiday weekend," the newsletter concluded in January.

ATM crimes can be estimated with similar accuracy with a system developed by Cap Index. The company, based in King of Prussia, Pa., uses a mathematical model based on Census Bureau information and criminal justice data to predict the vulnerability of specific ATMs to criminal activity.

The index assesses the probability of homicide, rape, robbery, assault, burglary, larceny, and auto theft per installation.

"What we've done is taken a mathematical model and predict where violent crime is likely to occur, and it's highly accurate," says Frederick A. Bornhofen, vice president and general manager of Cap Index. "We actually developed it for convenience stores."

Cap Index has been hired by Northern Trust Bank, Chicago; First City Bancorporation of Texas, Houston; AmeriTrust Co., Cleveland; and First Bank, Minneapolis, to evaluate their security systems, including branch and ATM vulnerability to crimes.

An ATM's location seems to be closely related to the amount of crime. Two weeks before Ms. Feitler was shot, Cap Index assigned a nearby ATM the highest risk rating possible.

"We rated an ATM for Northern Trust in Chicago about a block away from where the incident occurred," recalls Mr. Bornhofen. "It had the highest rating number we had seen – 1,500 – so we remembered it."

The system is only a year old, and banks using it say it is one of many factors used to determine the safety of a branch or an ATM location.

Although violent crimes have grabbed most of the headlines, they are just one of bankers' safety concerns. Fraud and stolen data, not crimes, account for banks' largest losses from ATMs.

The Bank Administration Institute reported that in 1986 $40 million was lost through fraud, and 90% of that was through customer fraud.

As technological expertise becomes more common, criminals become more sophisticated and seek larger sums, according to consultants. ■

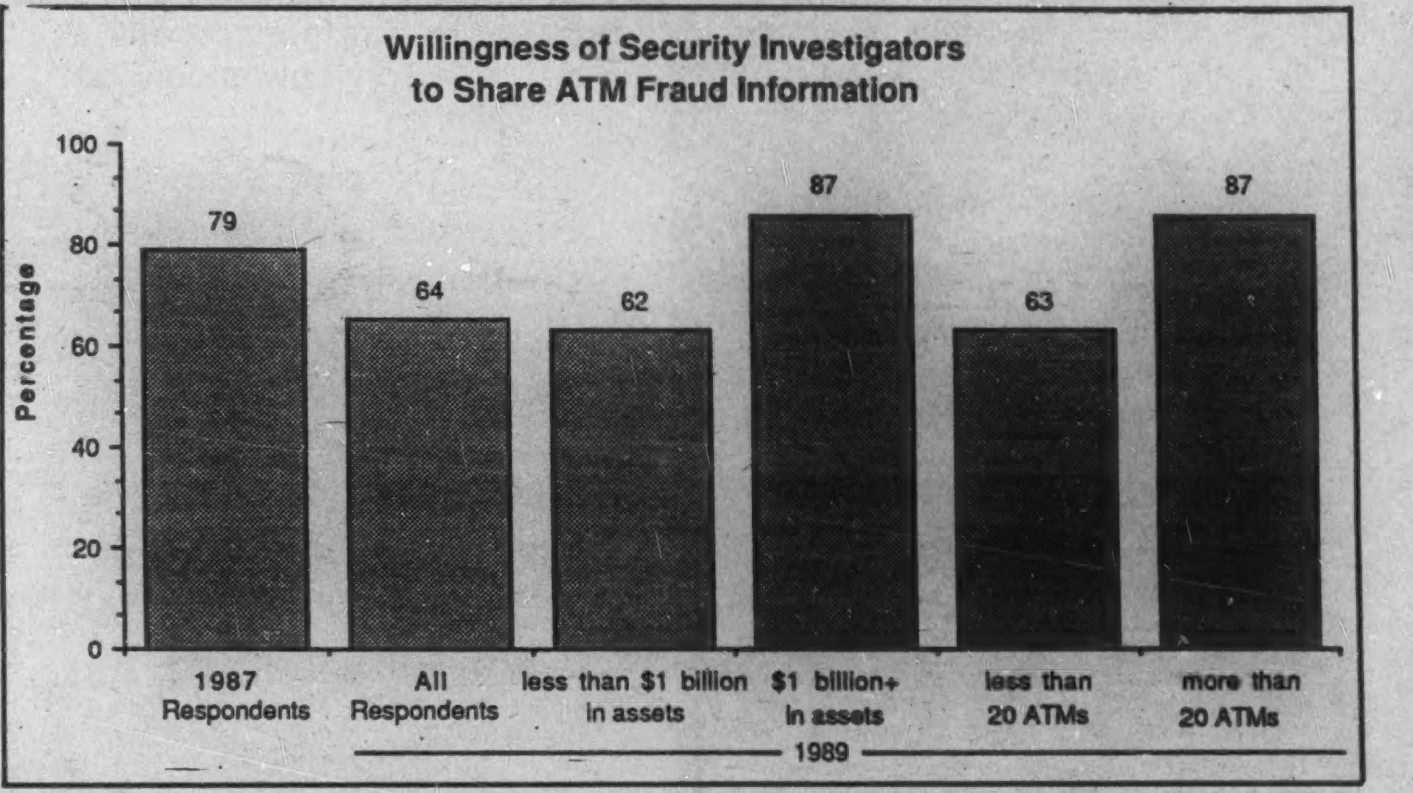
ATM Anti-Fraud Measures Evolving

Operators surveyed on thefts' detection, claims processing, and prosecution.

By MARJOLIJN VAN DER VELDE
Bank Administration Institute
Rolling Meadows, Ill.



AUTOMATED teller machine fraud is a concern of all operators, regardless of asset size, geographic location, or size of the ATM base.

To determine how financial institutions manage ATM fraud, Bank Administration Institute did a nationwide research study of bankers' policies to detect and report fraud, practices in fraud claim processing, and relationship with legal authorities.

A total of 1,219 financial institutions responded to the survey, providing information on calendar year 1988. This research updates and expands on information gathered in the institute's first study, in 1987, which was based on 1986 data.

Financial institutions participating in the most recent research had an installed base of 16,502 ATMs; they had issued 22,607,700 validated ATM cards and 4,935,800 ATM-usable credit cards. Monthly volume per ATM averaged 5,794 transactions.

The research indicated the average financial institution had 62 cases of ATM fraud in 1988 for a total loss per institution of $5,556. One case of fraud was reported for every 28,070 ATM transactions.

Detecting and Reporting Fraud

The proportion of financial institutions that routinely review usage reports to detect suspect activity rose from 54% in the 1987 survey to 60% in 1989. Using kiting reports is the more favored method to detect ATM fraud.

In 1986, ATM deposits were routinely mentioned in kiting reports at 52% of the participating organizations. That percentage increased to 64% in the 1989 survey.

Asset size or numbers of installed ATMs clearly are factors in whether kiting reports are used. Financial organizations with $1 billion or more in assets and ATM operators with 100 or more machines reported the greatest usage rates. This would indicate budgets and staffing levels can affect use of this fraud management technique.

"Hot carding" an ATM card after a report that it has been lost or stolen is a nearly universal practice; 98% of the sample indicated they do this. Of the 29 financial institutions that did not "hot card," 19 had fewer than 5 ATMs; one reported a base of more than 100 ATMs.

The willingness of security investigators to share information in their geographic areas was one of the more informal techniques financial institutions used to deter fraud.

Surprisingly, the percentage of organizations sharing data declined. In the 1987 survey, 79% stated that they shared data, but only 64% did so according to the 1989 survey.

Asset size and number of ATMs were factors. Among financial institutions with assets of $1 billion or more and those with more than 20 ATMs, 87% shared information. Just 62% of the organizations with less than $1 billion in assets and 63% of those with fewer than 20 ATMs shared data.

Claim Processing

Financial institutions can use a number of techniques during claim processing to decrease ATM fraud. Among these are requiring the customer to sign an affidavit, reminding customers of penalties for false claims, and referring intentionally false claims for criminal prosecution.

Requiring customers to sign an affidavit claiming unauthorized ATM use has been, and continues to be, the most common technique used by financial institutions.

However, the level of use in 1989 (74%) was lower than that reported in 1987 (86%). Only financial organizations with 100 or more ATMs used affidavits with a frequency to match the 1987 rate of 86%. This group of ATM operators also had the highest reported rate of fraud, an average of 375 cases and a loss of $61,265 per institution.

While reminding customers of the criminal penalties for false claims was the second-most-used technique in both 1987 and 1989, the industry average fell slightly, from 68% in 1987 to 64% in 1989.

Referring customers for criminal prosecution if they intentionally make false claims was done by 71% of the respondents. Bankers also indicated they have developed strict codes of ethics for employees in claims processing – 89% stated they would refer employees suspected of misappropriating bank funds for criminal prosecution. Financial institutions with assets under $100 million were the most likely to follow this practice (90%) and organizations with $550 million to $999 million, the least likely.

State and Federal Prosecution

The relationship of a financial institution with law enforcement agencies is the final link in the industry's effort to control ATM fraud losses. A strong working relationship can enhance a financial organization's entire fraud program.

Over the past two years, the degree of cooperation survey respondents received from the local prosecuting attorney's office has met with mixed results.

While 47% in the 1989 survey reported "excellent" or "good" cooperation in ATM fraud cases they refer for prosecution – up from 39% in 1987 – the percentage of financial institutions calling the level of cooperation "fair" or "poor" also increased. The highest satisfaction ratings came from financial institutions with 50 to 99 ATMs: 45% rated the degree of cooperation with the local prosecuting attorney's office as excellent.

Bankers were also asked whether the prosecuting attorney's office required certain pieces of evidence in order to prosecute an individual in an ATM fraud case. A minimum of four pieces of evidence was most likely to be required for either state or federal prosecution. They are:

- An affidavit signed by the customer.
- ATM transaction log.
- Picture of the accused individual from a camera.
- Audit tape from the ATM.

A minimum dollar threshold was required by 24% of the state prosecuting attorneys (minimum loss of $1,500) and 31% of the federal prosecuting attorneys (minimum loss of $5,100).

Recommendations

Internal procedures to detect and report fraud are often the first line of defense.

In too many financial institutions, ATM fraud policies are established in a vacuum; they are set by only one unit in the organization. Whether the functional unit is ATM operations, security, or branch management, to name a few, this approach is short-sighted.

To be most effective, these policies should be established in a process involving all concerned parties – ATM operations, security, auditing, retail banking, and marketing.

Once general policies have been adopted, internal procedures must be developed to ensure prompt handling of any situation that falls within the guidelines. Efficient claims processing and an effective working relationship with local, state, and federal prosecutors are critical to enforcing fraud policies.

Financial organizations should take the following steps to manage their anti-fraud efforts effectively:

- 1. Determine which internal reports have the best information for detecting fraud and use them routinely.
- 2. Strengthen communications with security officers at other financial institutions in the marketplace.
- 3. Examine ATM claims-processing procedures to ensure that proper controls exist.
- 4. Be proactive in communications with law enforcement agencies.
- 5. Determine evidence and dollar amounts required by each agency for ATM fraud prosecution.

As with most issues facing the industry, no magic solution exists to ATM fraud. But a financial institution must be proactive in its approach, proactive in developing and managing the necessary information systems, proactive in maintaining staff to carry out the required policies, and proactive in improving communications with other financial institutions and law enforcement agencies.

Those who consider ATM fraud "the cost of doing business" will find that their "costs" only increase. ■

Editor's Note: This article is based on the Bank Administration Institute's new research report on ATM security, which will be released at the institute's Retail Delivery Systems Conference in New Orleans today.

How to Minimize the Danger

1. Minimize barriers – including shrubbery, landscaping, tinted glass, curtains or blinds, and signage – that block visual access to the ATM from the nearest sidewalk, street, or pedestrian walkway.

2. Establish and maintain minimum lighting standards for ATMs, and the nearest parking areas and pathways. These areas must be monitored regularly for burned-out bulbs or other changing conditions.

3. Consider the uniform use of wide-angle transaction cameras, continuous-operation transaction or surveillance cameras, and installation of a camera inside the ATM service area, with remote monitoring and recording.

4. Consider having both regular-hours and after-hours ATM servicing and replenishment (especially off-site) done by two-person service teams.

5. ATM servicing policies, including robbery policies, should be in writing. ATM service teams should receive preservice and periodic in-service training on ATM security issues, policies, and practices.

6. Consider equipping bank ATM service teams with portable two-way radios and/or other alarm devices, and/or using appropriately-trained and equipped third-party servicers.

7. Reports of ATM service team-related crime must be thoroughly documented and tracked by a central person or office in each financial institution. Reports of serious incidents and corrective actions also should be directed to corporate legal counsel. Share information between bank branches in the same city or region, and among bank security officers and local law-enforcement agencies.

And Tell Your Customers:

8. Never write a personal identification number on the back of the ATM card. One recent survey revealed that 25% of all customers make this mistake.

9. Don't write the PIN on a piece of paper and then tuck it into a wallet or purse. A purse snatcher can figure out what the number stands for and use it.

10. When selecting a PIN, stay away from birthday and anniversary dates. Most card thefts are committed by people known to the cardholder.

11. Especially when in a rush, remember to take the ATM card out of the machine. About 30% of all customers leave the card in the slot, making it easy for the next person to gain access to their accounts.

12. Don't leave a wallet or purse in an unlocked gym locker.

13. Never leave an ATM card in an unlocked car or in a purse on top of or underneath a desk at work. Don't leave the purse unattended in a restaurant either.

14. When a family member is admitted to a hospital or nursing home, make sure to take his or her ATM cards and put them in a safe place. Many of the ATM card losses reported involved cards stolen from patients. □

ATM Crime Is Down In Past Two Years, Trade Group Finds

By YVETTE D. KANTROW

NEW ORLEANS — Despite growing public concern about crimes at automated teller machines, a Bank Administration Institute study shows that the number of ATM-related crimes has dramatically decreased over the past two years.

But institute executives and other observers of the electronic funds transfer scene say the results do not mean ATM users are safer today than they were two years ago.

According to the study, crimes were committed against ATM users last year at the rate of one for every 9.9 million transactions. That is a dramatic decrease from 1986, when a violent crime occurred once for every 3.5 million transactions.

Projecting these statistics nationwide using transaction figures reported in *Bank Network News*, a Chicago-based newsletter, 455 ATM-related crimes were committed in 1988, less than half the 1,029 incidents in 1986.

The trend runs counter to the popular perception that users of ATMs are increasingly at risk of being mugged, robbed, or worse, particularly after banking hours or in remote locations. In one particularly violent incident this year, a woman in Chicago was abducted, forced to remove money from an ATM, and then killed.

"You can't assume that ATM crime has gone down but clearly it is not as bad as it has appeared to be," said David Van L. Taylor, a group executive at the Rolling Meadows, Ill.-based trade group. "We can't prove it but we know there are pockets of problems out there."

Similar sentiments were expressed by David Robertson, research director for *The Nilson Report*, a Los Angeles-

Bank Leumi to Pay $533,000 for Role In Cash Laundering

By REBECCA COX

NEW YORK — Bank Leumi Trust Co., New York, has been assessed $533,000 in civil and criminal penalties for failing to file currency transaction reports on a customer allegedly engaged in a $9.5 million money-laundering scheme.

The total – $291,000 for civil violations of the Bank Secrecy Act and $242,000 for criminal misdemeanors – is among the largest ever paid in a case involving faulty reporting of cash transactions of more than $10,000.

The bank pleaded guilty Wednesday to the criminal charges, agreeing to pay the maximum fine on 242 federal misdemeanors related to the civil violation. The guilty plea was entered before Judge Joseph M. McLaughlin in U.S. District Court for the Eastern District of New York in Brooklyn.

Bank Leumi, a $3 billion-deposit subsidiary of an Israeli bank, is the latest to feel a crackdown by the Treasury Department on banks that have failed to comply with reporting requirements on large currency transactions. The

FDIC Warns of Higher Losses From Real Estate in 4th Quarter

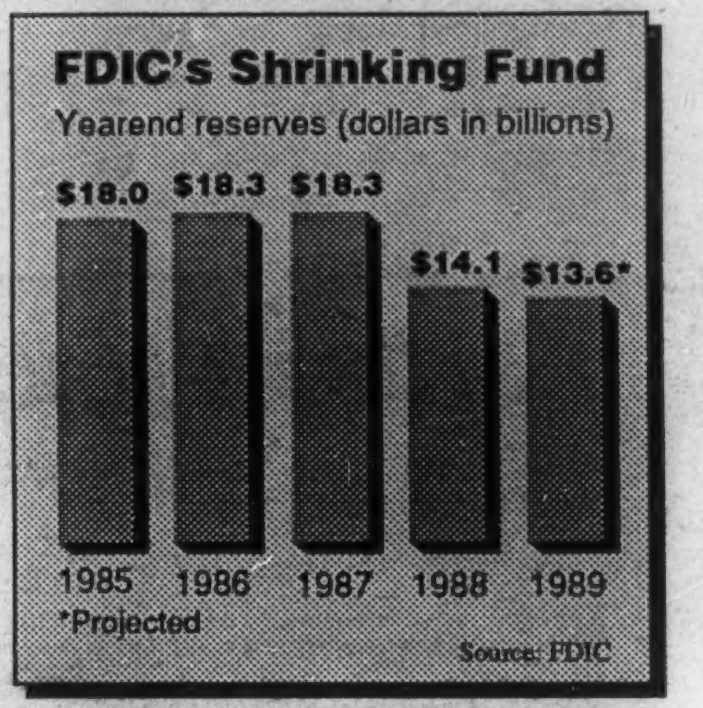
Industry Posted $744 Million Net Deficit in 3d Period

By ROBERT TRIGAUX

WASHINGTON – Huge loan-loss provisions led to a whopping third-quarter loss of $744 million by the banking industry, the Federal Deposit Insurance Corp. reported Wednesday. But while bank earnings are expected to recover by yearend, the industry's heavy reliance on real estate lending to fuel asset growth will continue to cut profits, the agency warned.

Meanwhile, the FDIC said that its bank insurance fund would decline by between $250 million and $500 million this year, the second consecutive year that the cost of resolving bank failures will have exceeded revenues from premiums and investment earnings.

In 1988, the FDIC fund lost more than $4 billion. L. William Seidman, the agency's chairman, predicted that the fund's reserves would increase next year.



FDIC's Shrinking Fund

Yearend reserves (dollars in billions)

*Projected

Source: FDIC

Mr. Seidman also said the number of banks on the FDIC's "problem" list declined by 19%, to 1,134. And he predicted that bank failures would decrease next year. Since January, 192

More Thrifts Challenge Capital Rules

By JIM McTAGUE

WASHINGTON — More thrifts are mounting court challenges against the tougher capital standards that take effect today.

For many, it's a life-or-death decision. Right off the bat, the rules could sink about 200 institutions and curb the activities of 600 more while they struggle to comply.

Some experts claim that, ultimately, the rules will kill the industry they are designed to save.

Three thrifts are asking judges to let them count regulatory goodwill and cumulative preferred stock as capital. Congress excluded those items, effective today, when it passed the thrift-bailout law last August.

The government had allowed special treatment for both regulatory goodwill and preferred stock to encourage healthy S&Ls to buy sick ones. The buyers are now accusing Uncle Sam of a "bait and switch."

Northeast Savings, Hartford, Conn., sued Tuesday in U.S. District Court for the District of Columbia. The $5 billion-asset thrift, with $210 million in goodwill, barely meets the new 1.5% tangible capital requirement after excluding goodwill and cumulative pre-

COMMENT

Banks Shoulder Too Much of LDC Burden

By MATTHEW W. BARRETT
President and CEO
Bank of Montreal

THE world debt challenge is not a simple bank-loan recovery matter. It is an economic development problem that has threatened the global economy for more than seven years and continues to do so.

Only governments can take the leadership role on which a fair and lasting solution depends. All parties concerned – debtors, banks, governments, and official creditor agencies, including the International Monetary Fund and the World Bank – must cooperate equitably. Such an approach can ensure the prosperity that will allow us all to grow our way out of the debt crisis.

The Bank of Montreal set aside a total of $1 billion against possible losses on lesser-developed-country debt during the 1989 fiscal year because it recognized that this kind of cooperation was absent.

Many developing countries have not serviced their foreign debts in full since 1982. Consequently, the developing world has faced a serious shortage of much needed foreign investment. There is no doubt that the debtor countries are suffering, but their problems cannot be alleviated by commercial banks alone. Should anyone be surprised that lenders are reluctant to risk new money when old money, or even the interest on it, still has not been repaid?

While banks' balance sheets have been significantly strengthened over the past few years, LDC indebtedness keeps banks under a heavy strain, one out of proportion to their share of the loans at risk.

> 'Should anyone be surprised that lenders are reluctant to risk new money when old money, or even the interest on it, still has not been repaid?'

Besides loan-loss provisions, this strain includes the new money that banks made available to lesser-developed countries under the Baker plan of 1985-88. Although the benefits were diffused widely through the international economy, the costs and risks were wholly borne by the banks and their shareholders.

Declining flows of aid and finance from official sources have exacerbated the disproportionate burden forced on the banks. It is estimated that at the end of 1988 banks held only 58% of the debt of the 15 most indebted middle-income countries such as Brazil and Mexico.

This is an unfair and dangerous sharing of the debt burden. Responsibility ought to be apportioned more equitably across the international financial system and ultimately managed by governments.

The idea that the LDC debt crisis can be solved solely by commercial banks may be convenient for many parties to the crisis, but it is fundamentally mistaken. Governments, and especially the Group of Seven (which includes Canada), have an inescapable leadership role as regulators, as major creditors themselves, and as de facto trustees for the world economy.

The most recent endeavor to address this problem appeared to take these realities into account. The so-called Brady plan put forth by the United States offered a complex package of options intended to reduce debt repayments and finance the economic recovery of developing nations.

Commercial banks generally welcomed Treasury Secretary Nicholas Brady's proposals as an overdue show of leadership by the Group of Seven

The Lobbyists

By Barbara A. Rehm

One Bank Group In Kansas Votes To Open Borders

The **Kansas Bankers Association** voted for the first time on Nov. 29 to back an interstate banking bill in the state legislature. Kansas is renowned for its resistance to opening its borders to out-of-state banks.

Although the KBA vote was unanimous, there is no guarantee that its membership will back the position.

Francis Carr

Francis E. Carr, chairman of the association's governing council, explains that a stance in favor of interstate banking was finally adopted after several surveys of members. He said the most recent poll was the impetus for the change as a majority of the members endorsed it.

"I hope we can present a unified front on this thing," says Mr. Carr.

That's unlikely since the **Kansas Independent Bankers Association** continues its traditional stance of neutrality.

"We were disappointed to see a change in policy," says **Michael D. Fahrbach**, president of the independent bankers. "The membership poll showed only 54% of the bankers favored interstate banking. We didn't feel that was a significant enough mandate for our association to change its position."

Mr. Fahrbach, also a KBA member, is president of Haven State Bank.

Mr. Carr explains that KBA's support is conditioned on state lawmakers' agreeing that any opening of the state's borders to out-of-state banking companies would not occur before July 1, 1992.

"We want to give bankers time to adapt," says Mr. Carr, who is also chairman and president of the First National Bank in Wellington.

Dean Witter Names Director To Lead Restructuring Fight

Kelly McNamara has been named director of federal government affairs for **Dean Witter Financial Services Group.** Ms. McNamara is a seven-year veteran of the governmental affairs office of Sears, Roebuck and Co., Dean Witter's parent.

As the group's senior lobbyist, Ms. McNamara will be on the front lines when the battle over financial industry restructuring begins next year. Ms. McNamara says she is optimistic about the odds for passage of a bill, strongly supported by Sears, that would permit all types of companies to own banks.

Ms. McNamara, 29, received a law degree from George Mason University in 1982. **Robert M. Garsson**

Independents in Holy War To Keep Deposit Insurance

In a lobbying coup, the **Independent Bankers Association of America** made a sweep of the bank regulatory agencies last week, pounding home the message that deposit insurance is sacred.

The IBAA executive committee, led by association president **O. Jay Tomson,** met with six of seven Federal Reserve Board members, including Chairman **Alan Greenspan,** and with **L. William Seidman,** chairman of the Federal Deposit Insurance Corp., and **Robert L. Clarke,** comptroller of the currency.

The independent bankers are concerned that national regulators are getting only the big-city bankers' perspective on issues, particularly deposit insurance.

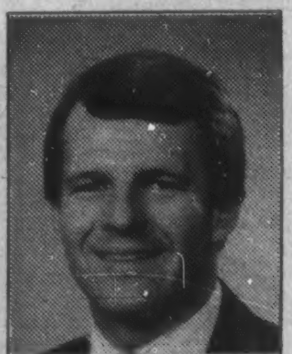
Kenneth A. Guenther, the IBAA's executive vice president, set up the meetings with regulators to counter proposals by money-center and regional bankers to cut back deposit insurance.

IBAA leaders explained to the regulators the results of a recently concluded study of consumer attitudes about deposit insurance. The IBAA-commissioned study by Market Facts Inc., Chicago, found that depositors would shift their funds to larger institutions if the current $100,000 insurance cap were reduced.

While preserving deposit insurance is the IBAA's No. 1 lobbying goal right now, Mr. Tomson and his crew also pressed the regulators on ag-lending issues, chartering policies, and thrift sales by the Resolution Trust Corp.

ABA Loses Farm Lobbyist To an Agriculture Agency

Rusty Jesser is leaving the **American Bankers Association** after five years of lobbying the House and Senate agriculture committees to take a top spot at the **U.S. Department of Agriculture.**



Rusty Jesser

Mr. Jesser expects to start his new job as the assistant administrator at the **Agricultural Marketing Service** in January. The ABA plans to replace Mr. Jesser with two people as the group returns to its traditional practice of assigning a lobbyist to both the House and Senate ag panels. The new House Agriculture Committee lobbyist is **Josh Tenuta,** who was a lobbyist for the National Rural Electric Cooperative Association. The ABA is on the verge of hiring a lobbyist for the Senate.

Mr. Jesser's expertise on ag issues is a big loss to the ABA, especially in light of **Weldon V. Barton's** recent departure from the Independent Bankers Association of America. Mr. Barton left the group in October after a decade of lobbying on agriculture issues. ■

500 Largest Banks Cut Municipal Bond Holdings 6% in First Half

▸ Continued from Page 11

lion; Chase Manhattan Bank, with $1.37 billion; and Bankers Trust Co., with $1.31 billion. The largest bondholder among banks outside New York was First Union National Bank of North Carolina, Charlotte, with $973 million.

Bank of New York posted the second-largest decline in bond holdings, behind Boston Safe Deposit, for the first half of 1989, with a decline of $308 million, or 25%, to $928 million. John A. Ross, executive vice president of worldwide assets and liabilities management for the bank, said the decline resulted from a large amount of short-term notes maturing on June 30.

Since then, he said, the bank has rebuilt its portfolio, which consists mostly of bank-qualified notes from local issuers in New York State – although the increase has been slower than in past years because of "more competition from other bidders."

Citibank Has Third-Largest Drop

Citibank trimmed $202 million, or 13%, of its portfolio, for the third-largest decline. A bank spokesman said the cutback "is part of a trend by money-center banks to reduce their municipals."

"There are many other tax credits available, particularly foreign credits for multinational banks," the Citibank spokesman said. "Municipals were once a major tax shelter, but with the other credits and tax law changes, they're a smaller and smaller part of the overall portfolio."

Chase Manhattan reduced its holdings by $190 million, or 12%, for the fourth-largest decrease. Bank officials would not comment on the decline.

Morgan Guaranty Trust Co.'s portfolio decreased $128 million, or 3.4%, in the fifth-largest decline. A Morgan spokesman's only comment was that the decline resulted "from a combination of sales and maturities."

Chemical Bank added the most municipal bonds of any bank during the first six months of 1989, increasing its portfolio by $52 million, or 3%. Only eight other banks added more than $20 million during the period.

Officials at the bank did not return telephone calls for this article.

Two banks adding bonds: Bank of New England in Boston, up $37 million, and Connecticut Bank & Trust Co. in Hartford, up $35 million. The two are in the same bank holding company, Bank of New England Corp.

William Morse, vice president and tax-exempt portfolio manager for the corporation, said, "Tax-exempt bonds are a good value, particularly those issued in New England, relative to government and agency securities and mortgage-backeds." He noted that 10-year, bank-qualified municipal bonds have a tax-equivalent yield of 9⅜% to 9½%, compared with 7⅞% for U.S. Treasury notes and 9% for 15-year mortgage-backed securities with an average life of six to seven years.

"I certainly wish this market had more depth and breadth to it," Mr. Morse said, referring to the tight supply of bank-qualified bonds. "There's a growing interest in this paper among banks, as they clear up their loan problems and get their earnings back on track."

First Virginia Bank in Falls Church added $35 million of bonds to its portfolio in the first six months of 1989. But the bank's portfolio manager, E. Machin Sarros, said the increase, which occurred entirely between January and April, resulted because "the market was good, not from any strategic policy."

"Our ability to purchase [municipal bonds] is fleeting, because we're participants in the short end of the market only," Ms. Sarros said. "Half of the additions were 18-month to 20-month maturities, and nothing was longer than five years. Five years is out in the ozone."

Portfolio Expected to Shrink

First Virginia has not bought any bonds since May, Ms. Sarros said, and the bank expects its portfolio to shrink by $60 million by the end of 1991.

More municipal bonds are held by Top 500 banks based in New York State than in any other state. Forty-five New York banks held $14.51 billion of municipals, or 24% of the 500 banks' combined portfolios. They were followed by 30 banks in Florida, with $4.31 billion; 28 banks in New Jersey, with $3.41 billion; 38 banks in Pennsylvania, with $3.35 billion; and 27 banks in Ohio, with $2.93 billion.

> Boston Safe Deposit cut its municipal portfolio by more than $1 billion, and the selling did not stop there.

The New York banks also boasted the largest average holdings, with $322 million per bank, followed by Arizona with $260 million, North Carolina with $226 million, Connecticut with $217 million, and Oregon with $202 million.

In addition, the New York banks also sold off the most bonds in the first six months, with a $1.22 billion reduction. Massachusetts was second with a $1.07 billion, or 38%, decline – almost all of it by Boston Safe Deposit.

Next came Florida, down $179 million; Virginia, down $166 million; and Ohio, down $160 million.

Banks in six states increased their combined municipal holdings in the first six months of 1989: Illinois, up a combined $32 million, or 2%; Kentucky, up $5 million, or 1%; New Hampshire, up $28 million, or 56%; New Mexico, up $1 million, or 0.5%; South Carolina, up $2 million, or 0.3%; and West Virginia, up $3 million, or 3%. New Hampshire's gain was due almost entirely to one bank, BankEast in Manchester, which increased its portfolio by $29 million, or 145%.

Banking Coverage Where It Counts
WASHINGTON MONDAY
Every Week in American Banker

Good News.

YOUR BANK
Cash Card
4000 1234 5678 9010
4000
VISA

It seems we're attracting a crowd.

In fact, over 700 financial institutions are now part of the Visa® Debit program. We just couldn't fit them all on the page.

That's because it's growing incredibly fast—by over 30% in the past six months.

You, too, can expect to grow as part of the program. By simply adding the Visa marks to your ATM card, you can realize higher DDA operating profits from both interchange income and periodic fees.

In other words, it can be more profitable for you than checking.

It's also more convenient for your customers. Giving them access to their checking accounts without their checkbooks.

Market View

Mail-Order Checks Threaten Banks

While only 2% of all bank customers currently order their checks from direct-mail suppliers, bankers should be aware that the trend could grow – and lead to revenue losses, warns David Mills, a vice president in charge of sales and marketing at Rocky Mountain Bank Note Co., Denver.

"Although I wouldn't anticipate the number of customers using mail-order check suppliers ever exceeding 5%, it's significant enough that banks should be aware of the potential and develop a clear strategy for responding," Mr. Mills said in a recent mailing to banks served by his check-printing company.

According to Mr. Mills, when consumers buy checks themselves rather than through their banks, the banks lose control over check quality and are exposed to fraud losses as more people have access to valid account numbers. Mr. Mills is recommending that banks train their employees to gently persuade consumers to order their checks at the bank. Statement stuffers that explain the pitfalls of direct-mail suppliers are another good idea, as is rolling the cost of checks into a flat fee that consumers pay for a checking account, Mr. Mills said.

Small Business a CBA Priority

The small-business market will be the focus of a Consumer Bankers Association conference to be held Feb. 13-15 in Atlanta. The Arlington, Va.-based trade group, which has historically focused on retail banking issues, will unveil the results of a survey it is conducting on how banks meet the needs of small-business customers.

Topics to be covered at the conference include relationship banking, market segmentation, the Community Reinvestment Act, and lending to women business owners. A special session conducted by representatives of the small-business community is also on the schedule.

Douglas K. Freeman, a Wells Fargo Bank executive vice president who was recently put in charge of that bank's small-business lending effort, will reveal the results of the Consumer Bankers Association survey. Mr. Freeman was formerly senior vice president for the San Francisco bank's consumer business.

William E. MacDonald 3d, executive vice president at National City Bank in Cleveland, and Edward E. Furash, president of Furash & Co., Washington, are also scheduled to lead conference sessions.

A 'Gone with the Wind' Card

Aficionados of "Gone with the Wind" are the latest group of loosely knit consumers to be offered an affinity credit card.

As the film passes its 50th anniversary, the Citizens and Southern National Bank, Atlanta, and MasterCard International are billing the new Gone with the Wind card as the world's first "continuity card." They mean that holders will receive a newly designed card every two years. Each card in the four-card series will sport actual scenes from the movie, including Scarlett at Tara, Rhett Butler, and Rhett and Scarlett together.

"Fans of 'Gone with the Wind' are very devoted to this classic piece of Americana," said Stephen J. Bartell, a MasterCard vice president. "Their loyalty represents an appropriate audience for a lifestyle-type MasterCard."

The first applications for the GWTW MasterCard will be available at the Fox Theatre in Atlanta, where "Gone with the Wind" is due to repremiere on Dec. 15. The bank will then market the card nationally, accepting applications via a toll-free telephone number.

Japan Edges U.S. in Number of ATMs

Study Says It Also Leads In Units per Population

By JEFFREY KUTLER

JAPAN has surpassed the United States in number of automated teller machines, but not by as wide a margin as some industry analysts have assumed, a survey of international ATM markets suggests.

The survey, published by the Battelle Institute in London and based on data gathered last January, shows the U.S. and Japanese banking industries in a dead heat, with 75,000 ATMs and cash dispensers in each country.

No other country has as many as 15,000 units, according to the study. All of western Europe has 56,000, with Britain and France accounting for almost half those machines.

By virtue of its faster growth rate, Japan would be expected to have surpassed the United States by now.

At the time of the previous Battelle report in 1987, the United States led with 67,000 ATMs, compared with Japan's 55,000. But since then, the U.S. total has grown by 8,000, or 12%, and the Japanese tally has jumped by 20,000, or 36%.

Conflicting Estimates

In any event, Battelle finds the two countries much closer in ATM numbers than does *The Nilson Report*, a Los Angeles-based electronic banking industry newsletter. Nilson had Japan leading the United States in 1985 by about 64,000 to 59,000. By 1988, the last time Nilson published an international survey, Japan widened the margin substantially, with 81,000 machines to the United States' 64,000.

Spencer Nilson, publisher of *The Nilson Report*, is closer to Battelle in his Japanese estimate than to other U.S. researchers in his domestic count. He has consistently been more conservative than other researchers – including Battelle – in tracking the U.S. market. His publication of the 64,000 figure last year drew criticism from John F. Love, publisher of the Chicago-based newsletter *Bank Network News*. Mr. Love placed the U.S. total at 75,632 in September 1989, up from 71,875 a year earlier.

Linda Fenner Zimmer, an independent researcher based in Marlborough, Conn., put the U.S. total still higher at 81,681 last year, with a projected increase to 87,133 by the end of 1989. Mrs. Zimmer gets her data from equipment vendors, while Mr. Love primarily surveys banks and ATM networks, and Mr. Nilson says he tries to reconcile all those sources. All of the researchers attempt to avoid double-counting of machines in multiple networks.

Regardless of which numbers are accepted for the United States and Japan, the two countries are clear leaders in most country-by-country comparisons. Although they are virtually tied in gross ATM installations, according to the Battelle data, Japan is in a league by itself in machines relative to population.

While the U.S. banking system has installed 306 machines for each million citizens, the Japanese banks have done twice as well, with 614 ATMs and cash dispensers per million people.

By this measure, Japan far outperforms even Finland and Norway, two of the more sparsely populated countries, which are renowned in Europe for high per capi-

Big Jewish Charity to Offer Affinity Card

By YVETTE D. KANTROW

THE major Jewish charity in New York has joined a growing list of charitable organizations – many of them with a religious cast – using affinity credit cards to aid in fund-raising efforts.

With the help of Affinity Group Marketing Inc. and the Bank of New York, the United Jewish Appeal-Federation of Jewish Philanthropies of New York Inc. launched the Legacy Advantage MasterCard this week. Cardholders will be able to charge contributions to the UJA-Federation on the Legacy card while taking full advantage of tax deductions on those donations.

Unlike other organizations involved in affinity programs, the UJA will not collect a portion of each sale made with the Legacy card.

"We created a lower-price credit card that gives the cardholder a benefit for being a contributor to the charity," said David C. Mann, president of Affinity Group Marketing, a New York-based consulting firm. "We think the net effect will be more money going to the UJA."

LEGACY
ADVANTAGE
MasterCard

CHARGE FOR CHARITY: The Legacy-MasterCard omits bank name.

Cardholders who contribute at least $3,600 to the UJA pay no annual fee for the Legacy card. Those who give at least $2,400 pay $7.50. The annual fee for noncontributors and those who give less than $2,400 is $15, which is competitive with standard MasterCard and Visa fees.

About one year ago, Catholic Charities USA began its affinity offering, the Caritas MasterCard, through an agreement with Magna Carda Inc., a marketing subsidiary of International Bank Cards. Catholic Charities divided the card-issuing and processing business between two financial institutions, First Financial Bank, Milwaukee, and State Street Bank and Trust Co., Boston.

Anytime a Caritas cardholder uses the card, 0.5% of the sale amount goes to Catholic Charities.

The fund-raising group hopes to have 250,000 cardholders by 1994.

Affinity Group Marketing is handling all solicitations for the Legacy card, and although the Bank of New York will technically issue the card, its name will not appear on its front. Mr. Mann said the UJA program will be small – he expects only 50,000 people to carry the Legacy card. The company will target the affluent New York Jewish community, seeking prospects in places like Bloomingdales' list of charge card customers.

Affinity Group Marketing is owned by a partnership of Mr. Mann, the labor negotiator Theodore W. Kheel, and the Bank of New York (Delaware). It worked with the New York bank on one of the biggest affinity card programs, the AFL-CIO MasterCard. The marketing company's programs have resulted in Bank of New York's issuing more than 1.6 million affinity cards.

"We've never done a charitable card before because we did not feel there was a real opportunity there," Mr. Mann said. "But we saw this [the UJA program] as an opportunity to do it right." ■

Japan, U.S. Are Head and Shoulders Above Other Nations in ATMs

Continued from Page 16

ta installation rates. Although Finland's banks own 2,114 ATMs, and Norway's only 1,557, their ATM-per-million ratios are 431 and 380.

Australia, whose financial institutions have installed about 5,000 machines, slightly exceeds the United States in units per million at 313. Switzerland, with 1,942 machines, has 299 per million people. Britain, with 14,116 – the third-highest ATM total after Japan and the United States – has 250 per million.

The Battelle researchers, led by Peter Hirsch and Ian Brookes, also compiled national transaction rates, measured in average cash withdrawals per machine per month. But there are no comparable data for Japan, for the same reason that the Japanese ATM count is difficult to pin down: Many Japanese ATMs are in bank offices, open only during banking hours, and their performance data are not widely published.

Among the top countries in ATM count that have per-machine transaction rates available, the United States tops the list, based on *Bank Network News'* recent estimate of 437 million transactions per month nationwide.

> Japan far outperforms even Finland and Norway, two of the more sparsely populated countries, which are renowned in Europe for high per capita installation rates.

That averages to about 5,800 transactions for each of 75,000 machines.

Britain came next, with 5,100 transactions per machine per month, followed by West Germany at 3,900.

But, as in the ATMs-per-population measure, less populous countries had the highest monthly transaction rates per machine: Sweden's 1,742 machines handle 8,000 withdrawals per month, Belgium's 985 units handle 6,800, Ireland's 371 machines handle 6,300, and the Netherlands' 1,166 machines 5,900.

Among other findings in the Battelle report, "ATMs and Cash Dispensers: An International Survey 1989," are the following:

- The worldwide total of ATMs and cash dispensers, at 235,000, has grown by a third since 1987 and has almost doubled since 1984.
- The largest single network of ATMs, the Carte Bancaire system in France, connects virtually all of the 11,457 machines in that country and is the only one of the world's 10 largest shared systems not located in Japan or the United States.
- While the 17 western European countries increased their ATM total 124% since 1985, to about 56,000, the Netherlands is the fastest-growing single country. Its ATM figure grew 143% in the past year alone, to 1,166, and those machines are among the continent's most active, with an average 5,900 cash withdrawals per month.
- Only two European countries have fewer than 100 machines – Greece, with 90, and Luxembourg, with 42. Greece also has the lowest number of machines per inhabitant, at 9, and the lowest usage rate, at 910 withdrawals per machine per month.
- European financial institutions have issued 180 million ATM cards, about equal to the U.S. total. Three-fourths of the European cards are multifunctional, meaning they can also be used as debit cards, credit cards, check guarantee cards, or some combination thereof.
- Diebold Inc., the dominant ATM manufacturer in the United States, with more than 40% of the market, has only 5% of the European market. NCR Corp. leads with 33%, followed by International Business Machines Corp. at 20%. IBM led NCR as recently as two years ago. ■

American Express Extends ATM Net With Portugal Deal

AMERICAN Express Travel Related Services Co. said Wednesday that it had extended its international automated teller machine network into Portugal, adding 500 machines and bringing its worldwide total close to 40,000.

The network, called Express Cash, allows American Express cardholders to obtain cash through bank-owned machines. Reciprocally, customers of the banks can obtain travelers checks through 150 ATM-like units at airports and American Express travel offices.

Of the 40,000 Express Cash Machines worldwide, 13,000 in Japan are accessible only to Japanese customers for technical reasons. The truly international portion of the network consists of 26,600 ATMs.

The Visa International ATM network remains the largest interchange of its kind, with about 40,000 machines available to all cardholders.

To expand into Portugal, American Express struck a deal with Sociedade Interbancaria de Servicios, a Lisbon-based provider of transaction processing services to most of the country's major financial institutions.

"The agreement [with American Express] reflects SIBS's policy of collaborating with major payment systems by offering a universal service in the framework of the European market," said Felipe Lesdesma dos Santos, joint director general of SIBS.

Such openness policies have been adopted in other western European countries in preparation for the lowering of trade barriers by 1992. James T. Larkin, an executive vice president of American Express in New York, has been critical of some national banking associations for conspiring to exclude American Express, but he praised the Portuguese group for its receptivity.

Following a similar agreement last year with Sistema 4B, a consortium in Spain similar to SIBS, American Express added 1,400 ATMs to its network. Belgium, Italy, Greece, and two machines in the Soviet Union were also connected over the past year, bringing Express Cash to 8,100 machines in Europe.

Ferguson–
One of the Nation's Largest
Financial Institution Consultants–
Offers You the Same Powerful Software
They Built for Themselves.

***BANKSOURCE,™* a bank analysis and forecasting PC system. *TAFS,™* a thrift analysis and forecasting PC system.**

Both provide you with sophisticated, user-friendly databases … on commercial banks, holding companies, savings and loans, savings banks … either nationally, by district, or state.

Choose Ferguson software to review a savings institution's financial history. Run a performance forecast on a bank or bank holding company. Merge two or more savings banks. Or, assemble different peer groups and compare, or rank, their performance against criteria in the database.

BankSource and TAFS beat their competition three ways: (1) Both deliver user-defined reports on all financial data, national totals and subtotals by state. (2) Both provide forecasting capability. (3) Both are substantially lower in cost.

Act now to order.
Call 1-800-248-8277.
We will supply you with a list of users, a brochure, and a free demo disk.

FDIC Says Real Estate Loans Threaten Bank Profits

▸ Continued from Page 1

banks have failed, and the year's total should not break 1988's record of 211, he said.

In releasing the FDIC's quarterly profile of bank performance, Mr. Seidman said, "We expect real estate losses to accelerate in the fourth quarter." The FDIC cited the Southwest, New England, parts of the Southeast, and elsewhere as markets with real estate problems. It noted that real estate lending has made up nearly 66% of all bank asset growth in the past year.

Traced to Loan-Loss Reserves

The dismal third-quarter performance by the banking industry stemmed largely from the decision of five money-center banks to raise their loan-loss reserves against nonperforming loans to less developed countries. Excluding the extra reserves, earnings were flat compared to those a year ago, Mr. Seidman said.

Fourth-quarter earnings will depend, among other things, on whether other large banks increase loan-loss reserves and on how much further certain real estate markets will deteriorate, the FDIC said.

"The present difficulties may foretell more problems down the road," the FDIC chairman said. "Forewarned is forearmed."

New England Woes Develop

For real estate lenders, the markets hit hardest continue to be in Arizona, Texas and Alaska – the three states with the highest ratio of noncurrent real estate loans to total real estate loans. But New England states, including Massachusetts, Connecticut, and New Hampshire, are experiencing unusually high rates of growth in noncurrent real estate loans, the FDIC said.

> The FDIC chairman predicted bank failures would decrease next year.

"The new problems are particularly evident in the Northeast, Arizona, and parts of Florida," Mr. Seidman said Tuesday to the National Council of Savings Institutions. "Certain northeastern areas, like Stamford, Conn., and central New Jersey, have some of the highest commercial vacancy rates in the country," he said.

Federal regulators from the FDIC, the Comptroller of the Currency, and the Federal Reserve System for months have sounded public warnings against excessive real estate lending. And while the regulators say they do not tell banks where to lend, they are starting to take legal enforcement actions against those banks that are failing to maintain proper lending standards. Banking lawyers say enforcement actions against banks in the New England region have been brisk in recent months.

Seidman as Scrooge

"I don't want to Scrooge up Christmas, but I'm afraid the fourth quarter will show a continuation of the [real estate] trends we see here," Mr. Seidman said at a press conference Wednesday.

In its "beige book" report on regional economic conditions, released Wednesday, the Federal Reserve reported weak real estate and construction activity in Boston, Atlanta, and Minneapolis and increasing commercial vacancy rates in New York and St. Louis.

Nonperforming real estate loans comprise nearly half of all nonperforming assets in the banking system, Mr. Seidman said. The numbers would look even worse if the FDIC, in assisting commercial banks, had not pulled bad assets out of the industry. FDIC guarantees at NCNB Texas National Bank alone have removed $5 billion in nonperforming real estate assets from the bank's balance sheets, he said. ■

Bank Leumi to Pay $533,000 for Role in Money-Laundering Case

▸ Continued from Page 1

Treasury and Justice departments have focused on enforcing these rules in an effort to deter money laundering.

Since 1985, the Treasury has penalized 44 banks a total of about $21 million, according to department spokesman Larry Batdorf. The Treasury's largest civil penalty, $4.75 million, was levied against Bank of America, San Francisco, in January 1986.

4 Banks Penalized This Year

So far this year, the Treasury has penalized four banks, including Bank Leumi, a total of $1.1 million, according to Mr. Batdorf. That figure does not include the $242,000 criminal fine that Bank Leumi will pay.

Bank Leumi was penalized for not filing reports on 242 deposits totaling $9.5 million at two of its branches between Jan. 1, 1981, and Dec. 31, 1985.

A single account for a Queens, N.Y., pizzeria called America's Best Family Showplace was the subject of the investigation. Although the account was maintained in the bank's Forest Hills branch, most deposits were made in a Bank Leumi office in Brooklyn, according to the Justice Department.

"It is clear from this case that the importance of financial institutions' compliance with the nation's currency laws is essential," Andrew J. Maloney, U.S. attorney for the Eastern District of New York, said in a prepared statement. "Without the cooperation of financial institutions in their criminal ventures, tax evaders and money launderers could not conduct their schemes and succeed in laundering the millions of dollars that they do."

The America's Best account was cited in a separate grand jury indictment this year. It alleged that the account holders managed to have their account fraudulently placed on a list of Bank Leumi customers exempt from filing transaction reports on specific accounts.

"The customer presented himself as a legitimate retail customer and, on that basis, was exempted from the reporting requirements," said Herbert Small, a spokesman for Bank Leumi.

But one transaction-reporting consultant said that banks can never be too careful.

"This is a classic example of the misuse of an exemption by a customer," said Arlington, Va.-based consultant Charles G. Morley. "It shows that banks have to carefully review customers, and understand their businesses, before exempting them."

Mr. Small of Bank Leumi said bank employees were not involved in the fraudulent listing.

But the U.S. attorney said that, although the bank's top management was not implicated, "the investigation did reveal a systematic and prolonged pattern of flagrant disregard for the currency laws by employees at the two branches of Bank Leumi."

Money launderers and other criminals seek out branch employees, and particularly branch managers, to help them circumvent currency transaction reporting requirements, according to law enforcement officers.

A similar case involving a branch employee came to light last month in a New Jersey federal court. Roberto Calleja, a former branch manager of First Fidelity Bank, Newark, pleaded guilty to helping launder $6.5 million to $11 million during four years ending in July 1985.

He exchanged small bills for larger-valued notes without completing currency-transaction reports. ■

Preying on Consumers

Where ATM crimes occur

Study Says Crime At ATMs Is Down

▸ Continued from Page 1

based newsletter than has criticized the Bank Administration Institute in the past for underestimating the frequency of ATM-related crimes.

"Given the fact that crime in general is going up, it is illogical to assume that ATM crime is going down," Mr. Robertson said. "The industry has done very little and can do very little to combat crimes at ATMs."

Mr. Taylor released the findings on Wednesday of the ATM security study at the institute's conference on retail electronic delivery systems in New Orleans.

The current survey, which was conducted this fall and covers ATM security policies, practices, and customer safety in 1988, was a followup to a similar project the institute completed in 1987 and based on 1986 data.

A total of 1,219 financial institutions participated in this year's survey, a response rate of 14.6%. The responding group reported more than 900 million transactions in 1988 at 16,502 ATMs, or about 20% of the 82,000 machines believed to be operating nationwide. While this is more inclusive than the group that participated in the 1987 study, results were adjusted to insure comparability of the two studies.

According to Mr. Robertson, crime statistics based on transactions do not accurately reflect the amount of risk borne by ATM customers.

"In all fairness to BAI, a study like this is incredibly difficult to undertake," he said. Banks, especially large ones, do not like to discuss it.

BAI defined an ATM crime as one that occurs within 20 feet of a machine. Respondents reported 80 such incidents in 1988. A majority occurred in business districts, and more than 40% between 9 p.m. and midnight.

In more than half of the incidents, customers were robbed after withdrawing cash from a machine. Another 40% were forced to withdraw money.

In an interview after his presentation, Mr. Taylor urged banks to take steps to combat ATM crime and said the industry could expect federal laws mandating that soon. ■

CORPORATE CASH MANAGEMENT HANDBOOK
Richard Bort

Written by Richard Bort, who has extensive experience as a banker, corporate practitioner and consultant, the **Handbook** leads your staff through virtually every aspect of corporate cash management — from a general overview of how funds flow through the firm and through the banking system to the specifics of the various tools and techniques used to manage corporate funds, including:

- EDI, EFT, and ACH
- lockboxes
- reconciliation services
- balance reporting
- information services
- securities services
- trust services
- credit services
- international services
- and much more!

What better way to market your bank's cash management services than with an aggressive, knowledgeable staff of cash management sales representatives and product managers? Experts who possess a complete understanding of the cash management services and products your bank provides, and who are wholly responsive to the needs of your customers.

Now there's a resource that gives your staff instant access to the information they need to serve your customers better — and ultimately to improve the marketing and sales of your bank's cash management services. Announcing:

Corporate Cash Management Handbook.

Corporate Cash Management Handbook is the most comprehensive treatment of modern cash management tools and techniques ever to be published in one volume. It gives your cash management services staff a complete understanding of depository, concentration, and disbursement systems, how and why corporations use them, and much more.

Examine It Free For 30 Days!

Corporate Cash Management Handbook is an indispensable resource for your corporate cash management services staff. One that will help them to improve their job performance and respond better to the needs of your corporate customers. And that means greater sales and profits for your bank!

To order the **Handbook** for a free 30 day trial examination, simply return the coupon below. Or call toll free: 1-800-950-1216. Ask about our special discounts for quantity orders!

Subscriber Information: © 1989. One volume. Casebound. Annual supplementation sent on approval; none issued to date.

FREE TRIAL OFFER—ACT NOW

☐ **YES!** Please send me **Corporate Cash Management Handbook** for my free trial examination. After 30 days, I will either return the book at no cost to me or honor your invoice for $98.00 plus postage and handling. I understand that the book is kept continuously current through annual supplements sent on approval.

☐ Bill me.

☐ SAVE! WG&L pays postage and handling on prepaid orders. Check enclosed payable to Warren, Gorham & Lamont, Inc. (CA, MA, and NY residents please add applicable sales tax on prepaid orders.)

To order immediately, call toll free: 1-800-950-1216.

Seidman Is Coy As Rumors Swirl

By BARBARA A. REHM

WASHINGTON — The rumor that L. William Seidman is ready to give up government is stronger than most of the gossip that routinely flows through Washington.

In fact, after weeks of repetition, this rumor is Herculean.

Although Mr. Seidman's words and actions have fed the gossip, the 68-year-old regulator flatly denies that he has any plans to retire as chairman of either the Federal Deposit Insurance Corp. or the Resolution Trust Corp.

"I've heard the rumors," Mr. Seidman said in an interview. "I have not decided to leave. Any reports to the contrary are wrong."

On its face, the rumor does not make sense. Four months ago, President Bush handed the regulator an inch-thick law with instructions to clean up the thrift industry. Mr. Seidman fought vigorously and successfully to be put in

LATE NEWS

New Hanover President

Thomas S. Johnson

NEW YORK — Manufacturers Hanover Corp. on Tuesday named Thomas S. Johnson, a top executive of Chemical Banking Corp., as its president.

The action puts Mr. Johnson, president of Chemical Banking Corp. and Chemical Bank, in line to succeed John F. McGillicuddy, Hanover's 59-year-old chairman, who announced he will retire before he turns 65. Mr. McGillicuddy did not specify when he will retire.

The president's post at Hanover has been vacant for 19 months. Analysts and bankers expressed surprise at the announcement.

White House Backtracks on Talk That S&L Bailout Cost Is Growing

By ROBERT TRIGAUX

NEWS ANALYSIS

WASHINGTON — When President Bush said this week that more money may be needed to resolve the thrift crisis, he sent a brief tremor through a financial industry still trying to cope with a $50 billion bailout signed into law only four months ago.

Bank lobbyists warned that another huge bailout package could lead to new federal assessments and could undo many of the carefully crafted provisions in the August bailout law. Leaders in the thrift industry – already tapped for funds by the first bailout – warned that another bailout so soon could wipe out its shrinking group of healthy S&Ls.

But the White House on Tuesday downplayed the President's off-the-cuff remarks and backed away from any suggestion that a "Bailout II" plan from the administration was imminent. It has been no secret that another major infusion of funds will be required to bail out the struggling savings and loan industry. Experts have said for some time that the $156 billion, 10-year bailout package signed into law in August is insufficient. "That it was an inadequate Band-Aid solution to a major problem was known at the time," said

Deutsche Bank Chooses a Career Man To Replace Herrhausen as Chairman

By JOHN EVANS

LONDON — Deutsche Bank of West Germany named Hilmar Kopper as its new chairman Wednesday, succeeding Alfred Herrhausen, who was slain in a terrorist bomb attack on Nov. 30.

Mr. Kopper, 54, a member of the top management board of Deutsche since 1977, is responsible for the bank's primary investment activities, all of its North American operations, and activities in the West German city of Cologne, according to an announcement by the bank in Frankfurt Tuesday.

"He is a Deutsche banker from the bottom to the top," a senior Deutsche official commented, noting Mr. Kopper had joined the bank – West Germany's largest – straight from school. "His wide international experience is a clear sign of the continuation of our bank's expansion plans at home and abroad."

Hilmar Kopper
New Chairman, Deutsche Bank

Mr. Kopper had been regarded as a strong candidate, along with Rolf

Sears, 8 Banks Unite to Offer EDI Service

Joint Effort Could Spur Use Of Technology by Industry

By RICHARD LAYNE

NEW YORK — An affiliate of Sears, Roebuck and Co. said Tuesday that it has formed an alliance with eight major banks to provide electronic data interchange, a fast-growing corporate service that banks have been slow to integrate into their cash management offerings.

Bankers in the alliance said it could give a long-awaited boost to their efforts in electronic data interchange. Known as EDI, the technology eliminates paper invoices and other documents in corporation-to-corporation transactions.

Through a network operated by Sears Communications Co., the eight banks will be able to send electronic payments and details about those payments for corporations seeking to streamline their trading systems. The banks are adding a financial and funds-transfer component to an EDI system that Sears Communications has provided to more than 300 corporations.

The first user of the financial service, called the Financial Data Interchange Service, will be the Sears Merchandise Group, the retail division of the Chicago company. The Sears unit exchanges electronic data with thousands of suppliers.

"The alliance is a major step forward in showing how important the financial component of EDI is to corporations using EDI," said Edward Freitas, vice president at Harris Trust & Savings Bank, a member of the Sears alliance.

In addition to Chicago-based Harris,

Republic to Post $50 Million Gain From Real Estate

By JOHN P. FORDE

NEW YORK — During a quarter when it is traditional for banking companies to disclose little-suspected troubles in their loan portfolios, Republic New York Corp. on Tuesday said it will book a $50 million nonrecurring gain from the sale of a real estate option in the fourth quarter.

Announcement of the gain helped the price of Republic New York shares in a mixed stock market Tuesday. At 1 p.m., the company's stock traded at $48.50 a share, showing a gain of $1 since Monday's close.

Accountants said that the $28.8 billion-asset Republic had the option of treating the transaction as normal income, which would have been a major boost to its fourth-quarter operating results.

But in keeping with the conservative policies that have made it a favorite of bank stock analysts, the bank has chosen to recognize the gain as nonrecurring.

"The option is neither positive nor negative for the future of the bank," said Chris Kotowski, an analyst with Oppenheimer & Co. "It simply means the institution is worth about $1.50 a share more than it was yesterday."

Republic New York, which is controlled by the international financier Edmond Safra, has built a reputation as a conservatively managed bank catering to wealthy individuals.

The company opened a bank in Switzerland in 1987 that has not yet contributed much to earnings but which analysts say has turned the corner in recent months.

Bank of Boston to Sell Credit Card Loans

$590 Million Portfolio Is Expected to Fetch a 20% Premium

By YVETTE D. KANTROW

NEW YORK — Bank of Boston Corp. has put its $590 million of credit card loans on the block, becoming the latest medium-size card issuer seeking to exit the business.

The bank – mired by $1.1 billion in troubled commercial real estate loans – has hired an investment bank to help find a buyer for its 675,000 MasterCard and Visa accounts, it announced late Monday.

Judging from similar, recently completed transactions, the portfolio is likely to fetch a 20% premium above the loan balances, or a total purchase price of $708 million.

Little Bottom-Line Effect

But analysts said that, while the move is strategically sound, a card sale by Bank of Boston will have little impact on its sagging bottom line.

"It will take some assets off their books and relieve some marginal funding problems, but it will have no real dramatic effect," said Dennis F. Shea of Morgan Stanley & Co. in New York. The sale is well-timed, however, coming during a period of accelerating consolidation in the bank card business.

Card portfolios have been changing hands at a rapid pace as the largest issuers, seeking to realize economies of scale, expand through acquisitions. In one of the biggest deals to date, Chase Manhattan Bank this year paid a 20.5% premium – and a total price of $1.325 billion – for $1.1 billion in card loans from Michigan National Corp.

But most recent sales involve medium-size portfolios, like the $552 million in card loans that First City Bancorp. of Texas, Houston, sold in October to the Bank of New York. The purchase price of $685 million yielded a premium of 24%.

In September, Bank of New York paid a $168 million premium, or 21%, to Dreyfus Corp. for $790 million in MasterCard accounts that Bank of New York had already been processing.

Bank of Boston found that "having 675,000 cardholders is an awkward size in a business that is consolidating so rapidly," said Mr. Shea of Morgan Stanley. "It's not giving you any cost efficiencies."

Bank of Boston is seeking an "agent" relationship with a buyer, under which it would continue to offer MasterCard and Visa services to its customers. The portfolio's buyer would process the accounts and own the receivables.

"While our credit card business is profitable, our ability to be a major provider in the current competitive environment depends on our being able to achieve much greater scale," said Richard W. Dalrymple, a consumer lending executive at the bank. That would require the bank to change its focus, he said. ■

Jersey Thrift's Reserve Will Cause Loss for Year

By MICHAEL WEINSTEIN

NEW YORK — In the latest indication of real estate lending problems in New Jersey, Howard Savings Bank said Tuesday that it would report losses for the fourth quarter and full year.

Howard, a $5.1 billion-asset thrift based in Livingston, said it would boost its loan-loss reserve by $70 million in the fourth quarter. Howard said this action would produce an after-tax loss of about $65 million for the quarter and $45 million for 1989.

"The additional reserve projected for the fourth quarter is brought on primarily by the serious slowdown in the New Jersey real estate market," Donald F. McCormick, Howard's chief executive officer, said in a statement. "This slowdown is characterized by a significant drop in demand and a general decline in the market values of residential housing and commercial properties."

> Howard Savings Bank said it would boost its loan-loss reserve by $70 million in the fourth quarter, producing an after-tax loss of about $65 million for the quarter and $45 million for 1989.

Last month, Moody's Investors Service downgraded the debt ratings of five New Jersey banking companies because of worries about real estate in the state.

"In virtually every [New Jersey] bank, there has been an increase in nonperforming assets in 1989," said Michael L. Granger, an analyst with Prescott, Ball & Turben Inc. So far, the major New Jersey banks have avoided big increases in loan-loss provisions.

At midday, Howard's stock was trading at $8.25 a share, down $2.25. Other New Jersey bank stocks were off, too. Midlantic Corp., Edison, was trading at $31.62, down $1.87; UJB Financial Corp., Princeton, was at $19.12, down 75 cents; and First Fidelity Bancorp, Lawrenceville, was at $25, down 50 cents.

"I think there will be some additional reserves set aside" at New Jersey commercial banks in the fourth quarter, said William McCrystal, director of research at Ryan, Beck & Co., West Orange, N.J. "But I honestly don't anticipate losses at [New Jersey] commercial banks."

After the 1989 loss, Howard expects its primary capital ratio to be about 7.3%. Howard belongs to the Federal Deposit Insurance Corp., so it is not affected by capital guidelines the Financial Institutions Reform, Recovery, and Enforcement Act dictates for thrifts.

Howard said its nonperforming assets may total $400 million at yearend, compared to $252 million at the end of the third quarter.

Its loan-loss reserve at the end of the third quarter was about $21 million. "If the bank were to experience further deterioration in its commercial real estate portfolio, additional increases in the loan-loss reserve could be necessary in subsequent quarters," Mr. McCormick said.

About 36% of the thrift's $3.6 billion loan portfolio is in commercial real estate loans. ■

FINANCIAL TECHNOLOGY UPDATE

A new item processing solution has significantly reduced labor costs for Liberty National Bank, Louisville, Kentucky. NCR's 7770-3000 Intelligent Multi-Pocket System, running a software application from Data Management Products of Omaha, Nebraska has eliminated 65 hours of return item processing labor. All 42 Liberty branches have been converted to centralized processing two months ahead of schedule.

The Financial TOWER System 2 (FTS 2) improves customer service while increasing the number of product offerings. Star Bank, a Cincinnati based financial institution, recently chose NCR's Financial TOWER System 2 for its new branch automation system. In addition to improved customer service and more product offerings, Star Bank wanted to increase productivity. They found that with their new NCR system in place, platform productivity grew in excess of the 20% they expected.

NCR introduces color CRTs for ATM use in August. 5070 Interior ATMs, 5084 Cash Dispensers and 5085 Extra-Function Terminals will all be capable of utilizing these new screens. A PC is installed to drive the EGA monitor which delivers vibrant colors. Standard graphics are provided or PC Paintbrush can be used to design new graphics or modify existing programs. Plus, the CRT's potential for "advertising" at the ATM site is impressive.

The ITX Windows Software System enables multiple host system jobs to be managed through one PC. As part of the new System 10000 software tool suite, ITX Windows allows users of NCR's Banker 80 II System to handle the after-hours work of up to 9 institutions in a multi-bank installation. In addition, loan officers can use the Loan Pricing system and review applicants' account records simultaneously. ITX Windows also supports software development with edit, graphics, view, and window creation capabilities.

For additional information on these new developments from NCR, phone 1-800-CALL NCR.

NCR

COMMENT

S&Ls Must Reassess Information Technology

By CHARLES J. SIPPLE
and THOMAS R. CAPTAIN
Deloitte & Touche

BY controlling risk and requiring improved profitability and possible additions to capital, the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 will put intense pressure on thrifts to process information more cheaply and better. This will lead to the biggest changes in information technology that the thrift industry has seen in decades.

The most recent surveys conducted by the U.S. League of Saving Institutions show that information technology costs are about 10% of the average thrift's noninterest operating expenses. Our research shows that as a percentage of an institution's total assets, annual information technology costs average 0.19%.

An institution may have valid reasons for falling outside this range. Lower than normal costs might be the result of fewer products, highly efficient branches, or fewer reporting and online capabilities. Higher than normal costs might be the price paid for superior customer service, lower personnel costs in customer service areas, or superior financial and analytic capability.

Making the Most of Mainframes

But some reasons are not as good. For example, a thrift may be paying a premium for extra capacity. Underutilized in-house mainframe computers may waste as much as $40,000 a month in lease payments. When usage pushes capacity to the limit, on the other hand, on-line response time for customer service and branch personnel may be too slow.

The ability to manage effectively at the margin of computer capacity is a key factor in controlling information technology costs.

Another reason for high information technology costs may be the addition of new lines of business. When a thrift diversifies into brokerage, secondary-market trading, wholesale loan servicing, or insurance, it may need more information technology staff to perform separate data management, data base maintenance, or application development functions.

> 'Each new line of business should be profitable enough to justify its technology costs.'

Personnel is usually the largest cost component of in-house information technology. As the complexity of a business increases, these personnel costs tend to increase geometrically.

Thus, each new line of business should be profitable enough to justify its information technology costs. A cost-benefit analysis can determine whether those costs are out of line, and why.

Higher than normal costs without sufficient justification indicate that there are opportunities for cost reduction, processing simplification, or improvement of methods.

New Law, New Information Needs

The thrift-rescue law will prompt many institutions to seek new types of information that provide insight into asset performance. For example, the new capital standards related to interest-rate risk, credit risk, and off-balance-sheet risk will intensify the need to assess the profitability of each business line. Scarce capital must be allocated to lines that are profitable, and lines that are unprofitable must be turned around or dropped.

Some institutions plan to meet capital needs through the earning power of their banking operation. Others will boost capital by converting from mutual to stock form or by selling shares.

Either way, better margins and higher overall earnings will become more critical than ever before. Every business line will have to be a contributor, and information measuring each one's performance will be essential.

Suppose you find that your information technology must become cheaper or better, or both. How can you lead the process of change? Because of the many innovations in today's information technology marketplace, the options and tradeoffs are complex.

Sophisticated Software

To provide better management information, for example, you might consider such technically sophisticated software packages as asset/liability applications, microcomputer downloading, and mark-to-market portfolio analysis. To track business line items in more detail, you might consider the costs and benefits of a relational data base management system.

Used in concert with a fourth-generation language, a relational data base will probably require more processing power, and therefore greater hardware expenditures. But it will also reduce both the initial software development cost and long-term outlay for software maintenance.

This could be a good tradeoff, because the past few years have brought a major shift in the cost structure of information technology: hardware costs are decreasing and software development costs are rising.

Another benefit of relational data base technology is the ability to answer ad hoc queries of existing information within minutes, enabling management to respond to market changes quickly.

By JED HOROWITZ

The Boss Wants More. The investment banking group of **Mitsui Bank** in New York, which is just 3½ years old, felt ambitious recently when it projected a 60% increase in profits for its 1990 budget, sources said. But its bosses in Tokyo were not impressed. They told the group to raise its target to 90%, according to a beleaguered Mitsui banker in New York.

A compromise 70% target was reached, but Tokyo refuses to send more bankers to help the unit reach its goal, sources said.

Other help may be on the way. Mitsui has sought Federal Reserve Board permission to invest in a U.S. investment banking boutique, according to sources. They would not name the firm, but believe the investment will give the bank access to more U.S. clients. The bulk of Mitsui's U.S. business is done for affiliate companies of its parent, which is part of the Mitsui manufacturing and financial services conglomerate.

* * *

Carding the Merchants. Midwest marketing maven Richard G. Barlow says **First Chicago** Corp. is considering asking merchants who participate in the bank's credit card promotions to split the marketing costs. He says the bank is talking to dry cleaners, restaurant owners, and others. What's in it for the merchants? Bank customer lists. "We'd be giving information on millions of cardholders in an identifiable group," says Mr. Barlow, president of **Frequency Marketing** Inc. in Milford, Ohio.

Banks have long offered discounted merchandise and other premiums to entice consumers to charge on their bank-issued credit cards. But they have also paid all the costs of such programs.

* * *

Poison Loan Protection. Mortgage lenders who fear being stuck with tainted repossessed property are developing a plan to defray the costs of decontaminating radon-infected homes.

Banking groups in Wyoming, North Dakota, South Dakota, Montana, and Colorado are asking the American Bankers Association to support laws requiring home sellers to establish "radon escrow accounts." The sellers would be required to park between $1,000 and $2,000 in a bank account for one year. That's the amount of time it takes to accurately gauge levels of radon contamination in a home, said Wyoming-based bank consultant Michael Stone.

If a house is not contaminated, the money would be returned to the seller with interest. Mr. Stone says the plan has won support from the Department of Housing and Urban Development and should please lenders. "The banker gets to use the money for a year," he says.

* * *

Private's Progress. **J.P. Morgan** & Co.'s private-placement unit will move from its Morgan Guaranty bank to its J.P. Morgan Securities subsidiary in early January, a bank spokesman said. The shift will mirror one recently made by Bankers Trust Co. The objective: to build a big base of revenues in so-called "eligible" securities against which the allowable level of newly approved "ineligible" securities can be calculated. The Federal Reserve Board limits revenues from the new activities, such as corporate debt underwriting, to 10% of the subsidiary's total.

One sour note: private-placement bankers work closely with bank lenders in financing issuers of private securities, but the Fed has imposed "firewalls" preventing lenders from working with their in-house investment bankers. Morgan has chipped away slightly at the restrictions. It recently won approval to lend money on a limited basis to issuers of securities that its subsidiary places. Morgan's holding company and nonbank subsidiaries also won the right to buy up to 50% of the securities placed by J.P. Morgan Securities.

1st Interstate Cites More Shaky Loans At Its Texas Bank

By STEVE KLINKERMAN

DALLAS — First Interstate Bancorp disclosed that an additional $1.14 billion of loans at its Texas unit could end up in default, raising the prospect that loan-loss reserves will be bolstered even further than the $300 million provision announced last week.

At Sept. 30, First Interstate's Texas unit held $560 million of nonperforming assets. After the $300 million fourth-quarter provision, First Interstate Bank of Texas will hold $890 of reserves for every $1,000 of nonperforming assets.

But First Interstate's disclosure – in the registration statement for a $400 million stock offering planned in January – indicated that the reserve position could be inadequate for future problems.

About $1.14 billion of Texas loans in addition to the nonperforming assets were in trouble at Sept. 30, First Interstate said, and "a substantial portion of [these] assets may migrate to nonperforming during the course of the next several years."

Ken Preston, a spokesman for First Interstate, said Thursday that the movement of troubled loans to nonperforming status "is just a natural progression that is to be expected." He refused to elaborate.

"There's no way First Interstate can say there isn't additional exposure in Texas," said Edward Thompson 3d, a vice president with Keefe BankWatch Inc., an affiliate of the *American Banker*.

Recent Texas transactions indicate that the loan portfolio of First Interstate's Texas unit is likely to deteriorate further.

Analysts said it is clear that First Interstate's Texas unit will need far more than its $300 million share of the

S&L Bailout Law Shakes Up Many Of Top 50 Thrifts, Sick and Well

By L. MICHAEL CACACE

NEW YORK — A ranking of the nation's largest thrifts demonstrates how the top institutions, both ailing and healthy, are being affected by the requirements of the bailout law enacted four months ago.

On June 1, only two large thrifts – Lincoln Savings and Loan Association and Gibraltar Savings – seemed to be facing serious problems.

But just six months later, 12 other big thrifts also are experiencing difficulties:

- Two have been placed in federal conservatorship programs.
- Two appear headed for conservatorship.
- The Resolution Trust Corp. has sold one of the thrifts in the program to a commercial bank.
- The Office of Thrift Supervision issued a cease-and-desist order to another.
- Three have sold their branch networks or other assets to meet the new

CoreStates Is Heartened by Success Of Its Futuristic Branch Prototype

By RICHARD LAYNE

NEW YORK — After a eight months of trials, CoreStates Financial Corp. has concluded that its $1 million "branch of the future" works well enough to warrant a second test location.

CoreStates executives estimate that their high-tech-and-neon approach can knock $150,000 annually off the cost of running a branch.

The CoreStates branch, which delivers a wide range of automated services at low cost, is one of several pioneering efforts around the country to apply principles of retail merchandising to branch banking. Most others – including Bank One Columbus, Chemical Bank, and Shawmut Bank – focus less on cost cutting than on building revenue through one-on-one selling.

At CoreStates' Philadelphia National Bank, the early payoff has been an enormous increase in deposits, assets, and new accounts since the redesigned branch opened in March.

Five years from now, self-service branches may be the norm, according to Bipin C. Shah, vice chairman of Philadelphia-based CoreStates. Mr. Shah said at least six banks, not affiliated with CoreStates, are considering purchasing the technology.

Other bankers say Mr. Shah is correct to pursue a strategy of cost cutting and better service. But they doubt

Gonzalez Gears For Campaign To Curb Fed

Chairman Cites Influence Of Banks in Shaping Policy

By ROBERT M. GARSSON

WASHINGTON — Lawmakers eager to trim the independent status of the Federal Reserve System gained the support of a key ally on Thursday. In a speech House Banking Committee Chairman Henry B. Gonzalez accused the Fed of conducting monetary policy in "splendid isolation" without regard for the wishes of the public, and said he is planning to take a broad look at restructuring the central bank.

In his speech before the Consumer Federation of America, Mr. Gonzalez said the Fed "operates as some separate government, free to veto economic policy spelled out by the administration, the Congress – and the American people at the voting booths."

However, neither in his speech nor in comments later to reporters did Mr. Gonzalez specify how he would change the Fed policymaking process to make it more responsive to administration and congressional policies.

But the Texas Democrat did suggest to reporters Thursday that he plans to take aim at the commercial banking system's special role in selecting the central bank's leadership and guiding its policies.

"Maybe we should enlarge the membership of the board, to include more than just the private banking system," he said.

Other critics of the Fed have expressed dismay that the presidents of the 12 district Federal Reserve Banks are selected by the banks' board of directors, which in turn is elected pri-

Economic Linkages Erode National Sovereignty

By HENRY KAUFMAN
President, Henry Kaufman & Co.

ONE distinguishing feature of the coming decade is already in place: The business and financial worlds will be more closely linked than at any time in history.

In the manufacturing industry, world markets have emerged for a vast range of products. Nearly complete interdependence now exists among countries for industrial parts and components, as well as advanced capital goods.

Technology, communications, and transportation have all reached a level of sophistication that encourages establishment of production facilities in regions inaccessible just a few years ago. This will continue.

In finance, the deregulation and interconnection of markets, the plethora of new credit instruments, and an irrepressible entrepreneurial drive have combined to create a global credit market that will enable major corporations and institutions, wherever they may be headquartered, to increase their efforts to maximize profits through intensive management of assets and liabilities.

Protectionist Agriculture

Only in agriculture and in certain service industries, where protectionist national policies prevail, will meaningful obstacles remain to integrated global markets.

The corollary to the emergence of a more tightly linked economic and financial environment is the continued loss of some aspects of national sovereignty. It is largely an illusion that any country, even the United States, has tight control over its economic destiny.

European countries have acknowledged this, and that understanding has animated their drive toward greater economic and financial union. That integration will make Europe more self-confident and more powerful politically as well as economically.

A New World Regionalism

The outlines of a new world regionalism are thus taking shape. Regardless of whether Europe becomes an economic fortress, it will take on new distinctive characteristics. Economic activity generated from within will surely be more important than in the past.

European countries with a surplus, such as West Germany, will become an even more important source of funds to other participants on the European continent and a less important source to the United States. The drive by business and financial institutions to be domiciled in Europe will intensify from a fear of Fortress Europe, as well as from the lure of potential profits.

The newly united Europe will also benefit from the opening up of the Communist bloc nations in the East. Its proximity, ample resources to finance products and service transfers, and its historical linkages to the East will contribute to an accelerated pace of economic and financial interchange.

The likely large volume of borrowing by the communist countries in the 1990s from Western Europe, however, will probably become the international debt problem of the late 1990s or the early part of the new century. It will then strain European banks, just as Latin American debt is a continuing burden on U.S. banks.

At one time, the major Latin American countries were net importers of U.S. goods (heavily financed by American loans). Now, they try hard to be net exporters to the United States in an effort to meet at least a portion of their debt-service burden. This will continue to be a drawback for the U.S. while Europe enlarges its exports to the East.

This is not to say that our business linkages with the rest of the world will be blotted out by the new regionalism in Europe or, perhaps, the emergence of a variant form in the Far East. Our business and financial ties with Japan, for example, will increase rather than lessen, regardless of any regional trade compact that may be reached in Asia, because of the strong complementary linkages between us.

Bolstering U.S. Position

These developments, however, should prod us to focus on our own domestic opportunities and needs and to make sure that the changing structure of our economy and financial institutions strengthens, rather than undermines, our position.

Let us face facts squarely. The United States, towering over other nations, was the overwhelming political and economic leader for much of the postwar period. But not any more.

Today, our own leaders speak of partnerships with other nations. Such partnership responsibilities differ from the singular U.S. lead role of the past. Our diminishing international responsibilities should give us the opportunity to revitalize a much changed and changing America. ■

This commentary is excerpted from a Nov. 16 speech that Mr. Kaufman gave to the Money Marketeers of New York University.

Funny Money

By TOM LEANDER

Don't Leave Home . . .

MasterCard's president, Alex W. Hart, tried in a speech last week to convince his audience that the MasterCard name is superior to that of its archrival, Visa.

Charles Russell

People worldwide know what a MasterCard is, he told the Bank Administration Retail Delivery Systems Conference in New Orleans, while Visa can mean many different things. Mr. Hart then offered that in France, Visa is a popular brand name of condoms.

Visa chief Charles T. Russell was unruffled by Mr. Hart's ribbing. Taking the podium after Mr. Hart, Mr. Russell simply proclaimed: "I'm happy to hear that at least in France, 'Visa is everywhere you want to be.' "

— Yvette Kantrow

Sophomore Citizen?

A complaint filed against Citizens and Southern Bank in Florida has added a new twist to the charge of age discrimination.

Peter Levine, a local businessman, tried to enter C&S's Floridian club, which offers free personalized checking and other freebies to depositors 55 and over who have a balance of $500 or more. He was rebuffed because of his relative youth.

Mr. Levine filed a complaint with the human relations division of Broward County, which is near Miami, asking the C&S branch in Plantantion to give him the same breaks it offers to members of the program.

Said Mr. Levine, "I don't have anything against older people. I just think that this is discrimination." The Broward County human relations division will investigate the complaint, a county official said. C&S had no comment.

The Morning After

The setting: Federal bankruptcy court in Dallas. The debate: Which of First Republic's predecessor banks caused the company to go into bankruptcy?

"It's said that the merger of InterFirst and Republic was like two drunks holding each other up," said Hugh Ray, a lawyer representing First Republic's senior creditors. "But one party drank a fifth of Jack Daniels, and the other party just had two glasses of white wine."

To which another creditors' lawyer later responded: "What's your preference, Mr. Ray, whiskey or wine?"

— Steve Klinkerman

Jetsetters

Hugh McColl, the aggressive chief executive of superregional NCNB Corp. in Charlotte, N.C., has been given the go-ahead to take his bank to new heights.

The Federal Aviation Administration this week ruled that NCNB's 60-story headquarters, still under construction, isn't so tall that it would impede air traffic from Charlotte Douglass International Airport and present a hazard to air navigation.

NCNB: Scaling new heights

The FAA's Atlanta office in May ruled that the building was a potential safety hazard, but the decision was reversed by officials in Washington.

Many Happy Returns

The spirit of Christmas giving can sometimes drive a person to crime.

Fleet Bank-N.H. in Keene, N.H., notified police last week that two bags containing cash and the checks scheduled to be dropped in its night deposit box were missing. The next day, the bank received a large envelope in the mail containing the bags and the cash.

Police traced the envelope to a 19-year-old Keene man who was to have made the deposit for his employer. The man admitted that he had taken the money to buy Christmas gifts.

In true Christmas spirit, the young man's employer decided not to press charges. The name of the man and his employer have not been made public. ■

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For FSLIC-insured thrifts not responding to the American Banker survey, data provided to American Banker by the Federal Home Loan Bank Board were used. For FDIC-insured thrifts not responding to the survey, data provided by **ADP Data Services Division, New York**— from its data base of thrifts reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks"— were used. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Capital:** (1) for FSLIC-insured thrifts it is **modified equity capital**, which is basically net worth on a GAAP basis. (To get GAAP net worth, you would subtract from modified equity capital deferred loan losses remaining on the balance sheet and unrecognized losses related to FASB 12— marking to market investments in mutual funds.) (2) for FDIC-insured thrifts capital is **total shareholders' equity,** which is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves less net unrealized loss on marketable equity securities. **Charter Types: 1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types: 1**-FDIC-Insured; **2**-FSLIC-Insured; **3**-State Insured. **( )**— A negative.

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For FSLIC-insured thrifts not responding to the American Banker survey, data provided to American Banker by the Federal Home Loan Bank Board were used. For FDIC-insured thrifts not responding to the survey, data provided by **ADP Data Services Division, New York**— from its data base of thrifts reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks"— were used. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Capital:** (1) for FSLIC-insured thrifts it is **modified equity capital**, which is basically net worth on a GAAP basis. (To get GAAP net worth, you would subtract from modified equity capital deferred loan losses remaining on the balance sheet and unrecognized losses related to FASB 12— marking to market investments in mutual funds.) (2) for FDIC-insured thrifts capital is **total shareholders' equity,** which is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves less net unrealized loss on marketable equity securities. **Charter Types:** **1**-Mutual Savings Bank; **2**-Stock Savings Bank; **3**-Mutual Savings & Loan Association; **4**- Stock Savings & Loan Association. **Insurance Types:** **1**-FDIC-Insured; **2**-FSLIC-Insured; **3**-State Insured. **( )**— A negative.

Data sources: Primary source is American Banker questionnaire sent to the 400 largest thrifts in the nation. For FSLIC-insured thrifts not responding to the American Banker survey, data provided to American Banker by the Federal Home Loan Bank Board were used. For FDIC-insured thrifts not responding to the survey, data provided by **ADP Data Services Division, New York**— from its data base of thrifts reporting to the FDIC on the quarterly "Consolidated Reports of Income and Condition for Savings Banks"— were used. **Total deposits and savings accounts** include: non-interest earning demand and NOW accounts; accounts earning in excess of regular rate in certificates with denominations of $100,000 or more and in other accounts; and accounts earning at or below regular rate in interest-earning NOW accounts, in passbook accounts, and all other accounts, except escrowed accounts. **Capital:** (1) for FSLIC-insured thrifts it is **modified equity capital**, which is basically net worth on a GAAP basis. (To get GAAP net worth, you would subtract from modified equity capital deferred loan losses remaining on the balance sheet and unrecognized losses related to FASB 12— marking to market investments in mutual funds.) (2) for FDIC-insured thrifts capital is **total shareholders' equity,** which is the sum of perpetual preferred stock, common stock, surplus, and undivided profits and capital reserves less net unrealized loss on marketable equity securities. **Charter Types:** 1-Mutual Savings Bank; 2-Stock Savings Bank; 3-Mutual Savings & Loan Association; 4- Stock Savings & Loan Association. **Insurance Types:** 1-FDIC-Insured; 2-FSLIC-Insured; 3-State Insured. **( )**— A negative.

S&L Bailout Law Shakes Up Many of Top 50 Thrifts, Sick and Well

▸ Continued from Page 1

capital guidelines.

- Three recently took special provisions for problem commercial real estate loans to cleanse their balance sheets.

"This certainly indicates that unlike some of the previous thrift bills, FIRREA is going to rearrange the entire banking industry," said Don Inscoe, the chief banking analyst at Veribanc Inc., Wakefield, Mass., a banking research company.

"Previous legislation was drafted to allow companies to work out their problems and extend their lives. FIRREA was drafted to give regulators the maximum flexibility to close companies by imposing more stringent capital guidelines and operating restrictions," says Bruce Harting, a vice president at Salomon Brothers. Mr. Harting adds, "Also, under FIRREA, funds have been provided to enforce the act."

These are some of the findings of the *American Banker's* survey of the top 300 thrifts in deposits and assets. The tables, which begin on page 6, are based on data as of June 30, 1989, the latest available for individual thrift institutions.

The two institutions placed in federal conservatorship programs this year were 19th-ranked City Federal Savings Bank, Bedminster, N.J., and 28th-ranked Western Savings and Loan Association, Phoenix.

City Federal Savings Bank was placed under RTC conservatorship by the Office of Thrift Supervision on Dec. 8, and its name was changed to City Savings Bank. Western Savings and Loan Assn. was declared insolvent and placed in the federal conservatorship program on June 14.

The 21st-ranked Gibraltar, based in Beverly Hills, went into conservatorship on March 31 and into receivership on Oct. 30. The 42d-ranked Lincoln Savings, based in Irvine, Calif., is now in receivership and went into the conservatorship program after it was closedby federal regulators for unsafe and unsound practices on April 14.

The two thrifts that might be placed in conservatorship are 25th-ranked Atlantic Financial Federal, Bala Cynwyd, Pa., and 32d-ranked MeraBank, Phoenix, Ariz. On Dec. 6, Atlantic Financial Federal stated in its earnings release for fiscal year ended Sept. 30 that it currently does not meet the new capital requirements and therefore may enter the federal conservatorship program.

Also on Dec. 6, Pinnacle West Capital Corp., the parent of MeraBank, reached agreement with the OTS to inject $450 million into MeraBank. In return, the OTS agreed to release Pinnacle West from its obligation to maintain adequate capital levels at Merabank. Industry observers believe that MeraBank's deteriorating financial condition will compel the government to take it over.

On Oct. 13, 45th-ranked University Federal Savings Association, Houston, was acquired from the RTC by NCNB Texas National Bank, Dallas, under a purchase and assumption transaction.

On Dec. 8, the OTS cracked down on the ailing 22d-ranked CenTrust Bank, Miami, by issuing CenTrust a cease-and-desist order, one step short of regulatory control. The order requires CenTrust to take several steps to return to safe and sound banking.

Three California-based thrifts in the top 50 recently took special loan-loss provisions or wrote down problem loans from their commercial real estate portfolios to cleanse their balance sheets. On Nov. 28, Great Western Financial Corp., parent of 2nd-ranked Great Western Bank, Beverly Hills, announced it would post a $75 million loss in the fourth quarter because of $200 million in writedowns and provisions for problem commercial real estate loans in Arizona, Texas, and Florida.

Also in late November, GlenFed Inc., parent of 4th-ranked Glendale Federal Bank, announced that it would take a special $30 million provision to raise its general loan-loss reserve for problem multifamily and commercial loans, mostly in Florida. And eighth-ranked Great American Bank, San Diego, announced that it lost $65.6 million in the third quarter, primarily because of real estate problems at its Phoenix thrift.

Other Survey Findings

- Home Savings of America, Irwindale, Calif., again was the nation's top thrift in deposits and assets at midyear. Its deposits totaled $31.6 billion on June 30, up 30% from the year before, and its assets totaled $44.3 billion, up 37%.
- The top 300 thrifts had total deposits of $747.9 billion on June 30, 1989, up 3.2%. The top 300 thrifts had assets of $1,082.3 billion, up 4.1%.
- According to data from the OTS and FDIC, there were 3,405 thrift institutions with $1,050.8 billion in deposits, $1,576.4 billion in assets, and $54.9 billion in equity capital. Thus the top 300 thrifts had a record 71.1% of the industry's deposits and 68.7% of the industry's assets. At yearend 1988, the top 300 thrifts had 65.2% of the industry's deposits, the previous record. Just five years ago, the top 300 thrifts held 59.6% of the industry's deposits.
- Of the 3,405 thrifts in operation at midyear, 2,934 were FSLIC-insured (now Savings Association Insurance Fund or SAIF-insured) and 471 were FDIC-insured state-chartered thrifts. ■

MeraBank Deal Gives Regulators Another Black Eye

By JIM McTAGUE

NEWS ANALYSIS

WASHINGTON — When the book of regulatory bloopers is written, the handling of MeraBank is likely to be a case study.

First, regulators let the $8 billion Arizona thrift buy three failed institutions in Texas to revitalize them, not realizing that MeraBank itself was taking on red ink at an astounding rate.

Then, the agency let MeraBank's parent, Pinnacle West Capital Corp., out of an agreement to cover fully any losses stemming from the thrift. Pinnacle West paid a steep price to get out of the agreement – $450 million – but taxpayers could end up footing the rest of the bill – $500 million to $1 billion, according to analysts.

More embarrassing for the government, Pinnacle's stock price more than doubled the day after the government deal, earning back for shareholders the $450 million committed the day before.

For the thrift regulators who made the Texas deal possible, the unraveling of MeraBank couldn't happen at a more inauspicious time. House Banking Committee Chairman Henry B. Gonzalez, D-Tex., who in a series of hearings savaged federal regulators' handling of the Lincoln Savings and Loan failure, intends to scrutinize last year's sales of hundreds of insolvent thrifts.

MeraBank is "one of the items on the chairman's agenda, no question about it," said committee staff member Jake Lewis. Mr. Gonzalez has asked his staff to keep an eye on the developing story.

MeraBank in June 1988 was considered by federal regulators to be among the best-run thrifts in the country. Its

First Chicago Corp. Will Sell Card Processing Unit to Citicorp

By RICHARD LAYNE

NEW YORK — First Chicago Corp. on Tuesday became the latest big banking company to abandon the business of processing credit card transactions for retailers. But unlike other banks that have made the move, First Chicago is keeping its business within the banking industry.

The company signed a definitive agreement to sell its merchant business to Citicorp Card Acceptance Services, a unit of the nation's largest bank holding company and the second-largest processor of merchant transactions.

Citicorp, which is also the largest companies on the consumer side of the credit card business, with 27 million

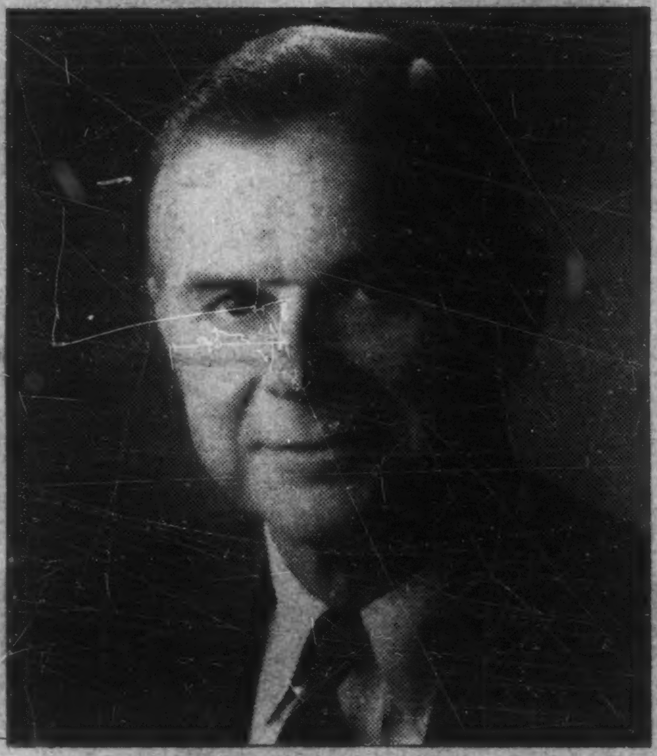
Fox Named CEO at Northern Trust, Likely to Succeed Retiring Chairman

By RICHARD RINGER



David W. Fox
CEO, Northern Trust Corp.

CHICAGO — David W. Fox was tapped Tuesday to become chairman of Northern Trust Corp., five years after he was passed over for the top job.

Mr. Fox, 58, the company's president and chief operating officer since 1987, was named chief executive officer. And Chicago-based Northern said that it expects Mr. Fox to be elected chairman in April 1990, succeeding the 64-year-old Weston R. Christopherson, who will retire.

In prepared comments, Mr. Fox appeared to dismiss widely circulated market rumors that Northern is for sale.

"I firmly believe that Northern is well positioned to not only compete in the decade of the 1990s but to be a strong, successful, and independent part of the financial future of Chicago for many decades to come," Mr. Fox stated.

Some analysts have speculated that the $11 billion-asset Northern would

Clarke Unveils System to Track Bank Problems

Computer Model Focuses On Real Estate Pitfalls

By ROBERT TRIGAUX

WASHINGTON — In an effort to head off growing real estate problems, federal regulators will begin using a computer model next month to help pinpoint financial institutions at the greatest risk.

The program, announced on Tuesday by Comptroller of the Currency Robert L. Clarke, will keep track of collateral values by determining the market value of bank and thrift real estate portfolios. Also, it will project writedowns likely to result from the liquidation of real estate assets in local markets by the Resolution Trust Corp. and other government agencies.

The program is expected to provide regulators with early warning of where next month's or even next year's troubled institutions may emerge, and to permit quick assignment of on-site examinations. "That's something we could not do before," said a spokeswoman for Mr. Clarke.

Ultimately, it will also give examiners more precise evidence to present to a bank when they believe it should alter the way it handles its real estate lending business. For example, it will strengthen examiners' arguments when they challenge questionable real estate appraisals relied on by a lending institution.

"The model will help us be persuasive with data to convince management and the board of directors to change their practice," Mr. Clarke said during a press conference to address regula-

Imperial Cites Negative Capital, Spurring Speculation on Seizure

By TERESA CARSON

LOS ANGELES — Imperial Corporation of America, the troubled San Diego thrift holding company, disclosed that it will report negative net worth for the fourth quarter after taking more writedowns on its junk bond portfolio.

The value of Imperial's $860 million junk bond portfolio declined by $51.7 million in October and November. As a result, Imperial said late Monday, "the firm's tangible capital is negative." It would not specify the extent of its capital shortfall.

One analyst speculated that Imperial, parent of Imperial Savings Association, would be seized by regulators because it is insolvent under generally accepted accounting principles.

"I don't know when they might get to it, though; the regulators are working to capacity" on other problem thrifts, said Michael B. Abrahams, an analyst at Bateman Eichler, Hill Richards Inc., Los Angeles.

Although San Diego is an attractive market and several banks have made acquisitions there recently, Mr. Abrahams said, any buyer would want help from regulators.

Michael J. Lea, senior vice president and chief investment officer at Imperial, said, "We have not had any communications from either the Office of Thrift Supervision or the Federal Deposit Insurance Corp. that would suggest they are going to seize us." But he acknowledged, "They certainly could if they wanted to."

Most thrifts invested in junk bonds are expected to take additional writedowns in those portfolios in the fourth quarter, after big hits in the third quarter. "Remember, there are several hundred institutions in the same ballpark we are," Mr. Lea said.

Columbia Savings and Loan Association, Beverly Hills, Calif., announced last week that the value of its junk bond portfolio had dropped by $320 million in October and November. Columbia's $3.8 billion junk bond portfolio is the largest held by a thrift.

Thrifts must dispose of their junk bonds under the Financial Institutions Reform, Recovery and Enforcement Act. And because the bonds are no longer being held for investment purposes, accounting rules require that they be written down to reflect current market value, or the bonds' original cost, whichever is lower.

Imperial, which has been beset by losses, has been scrambling to boost capital. The $10.5 billion-asset company is aggressively selling assets that would bolster capital if there are gains. The sales would also reduce the company's size and thus increase its capital ratio.

No Merger Contemplated

Imperial said in its statement that its capital-building plans do "not contemplate potential mergers or other infusions of capital."

Allan R. Tessler, interim president and chief executive officer, said Imperial had just sold $110 million in auto leases. It has already announced a deal to sell its $283 million credit card portfolio to Wells Fargo & Co. in a transaction that will likely close this year and yield a "substantial gain."

Imperial sold $850 million in assets in the third quarter, mostly bonds and auto leases.

Like all undercapitalized thrifts, Imperial must submit a capital plan to regulators. It expects to do that "within the next few days," said Mr. Tessler.

Imperial also has been searching for a new president since former chief executive Kenneth J. Thygerson resigned in July. Mr. Thygerson, 44, had been president of the Federal Home Loan Mortgage Corp. before coming to Imperial in 1985. He charted a wholesale strategy for the money-losing Imperial, piling on junk bonds and buying loans in bulk.

The strategy worked for a while: Imperial earned $50.3 million in 1986 and $51.3 million in 1987. Earnings fell to $14.9 million in 1988, however. Many purchased loans went sour and then the junk bond market hit the skids.

Imperial lost $103.1 million in the third quarter of this year and $136.2

Security Does Card-Backed Issue

By TERESA CARSON

LOS ANGELES — Security Pacific National Bank is issuing $750 million in credit card participation certificates, the first for the California banking giant.

"We've consolidated and restructured our credit card business, and this helps us take advantage of a funding opportunity," said Ronald Azzolina, executive vice president, Security Pacific Credit Card Services. The corporation is consolidating all its credit card operations of all its banks into a single affiliate in Arizona early in 1990.

Mr. Azzolina said Security may do more of these if the opportunity arises.

The underlying receivables are generated by Visa and MasterCard accounts and overdraft checking accounts of Security Pacific National Bank, primarily in California. At Dec. 12, before the issue, Security Pacific Corp. had $1.5 billion in credit card receivables and Security Pacific National Bank had slightly over $900 million.

Other banks, including Citibank, Chemical Bank, and First National Bank of Chicago, have done similar issues.

The issue is being underwritten by Goldman, Sachs & Co. and Security Pacific Merchant Bank. It is rates AAA by Standard & Poor's Corp. and Aaa by Moody's Investors Service. The 8.45% certificates were priced at 99.61 to yield 8.49%. ■

Corrections

Equity capital for two New Jersey-based thrifts was reported incorrectly in a Dec. 15 listing ("Top 300 U.S. Thrift Institutions," pages 6-12). City Federal Savings Bank, Bedminster, had $303.9 million in capital at midyear and a capital-assets ratio of 2.94%. Columbia Savings Bank, Fair Lawn, had $66.7 million in capital and a ratio of 5.36%. Columbia Savings supplied an erroneous number.

□

The graphic accompanying a Dec. 19 article on Sumitomo Bank of California ("Sumitomo Seeks Non-Asian Borrowers," page 2) incorrectly reported the bank's net income during the past eight years by a factor of 10. The scale should have ranged from 0 to $25 million. ■

SCFC Home Equity Loan Trust 1989-1

8.80% Home Equity Loan Pass-Through Certificates, Series 1989-1, Class A

Sears Consumer Financial Corporation
Servicer

SCFC Receivables Financing Corporation
Seller

The Class A Certificates evidence beneficial interests in SCFC Home Equity Loan Trust 1989-1, a trust to be formed pursuant to a Pooling and Servicing Agreement to be entered into among SCFC Receivables Financing Corporation, as Seller, Sears Consumer Financial Corporation, as Servicer, and Security Pacific National Bank, as Trustee.

The property of the Trust will include a pool of home equity loans secured primarily by second mortgages on one- to four-family residential properties, amounts from time to time deposited in the Collection Account, and certain other property, as more fully described in the Prospectus.

An election will be made to treat the Trust property, exclusive of the Payahead Account, as a real estate mortgage investment conduit ("REMIC") for federal income tax purposes.

The Certificates represent interests in the Trust and do not represent interests in or obligations of Sears, Roebuck and Co., the Seller, SCFC or any of their respective affiliates. Neither the Certificates nor the Receivables are insured or guaranteed by any governmental agency.

Price 99.57%
Plus accrued interest at the Pass-Through Rate from December 1, 1989.

Copies of the Prospectus may be obtained from the Underwriters only in states in which such Underwriters are qualified to act as dealers in securities and in which the Prospectus may be legally distributed.

LEGAL ALERT

By TOM LEANDER

ABA Endorses Code To Establish Rules For Funds Transfer

The American Bankers Association has endorsed an addition to the Uniform Commercial Code that establishes guidelines for electronic funds transfer.

The code governs sales contracts, letters of credit, and check collection. The wire-transfer addition – Rule 4A – will be considered for adoption into the code by legislatures in all 50 states, the ABA said. It has also been endorsed by the American Bar Association.

Rule 4A establishes a method of measuring damages for late execution of payment orders and hammers out resolution procedures for erroneous transfers, among other questions pertaining to wire transfers.

"It's an area in which the law has not kept up with the marketplace," said ABA spokesman Edward Alwood.

Judge Says FDIC Must Wait To Sue Former Bank Officers

When the Federal Deposit Insurance Corp. purchases a failed bank, it does not gain priority over shareholders in suits against the bank's former officers, a federal judge has ruled.

As the receiver of Florida-based Park Bank, the FDIC argued, its suit against the bank's former officers should be heard first. The FDIC eventually sold Park Bank, St. Petersburg, to Chase Bank of Florida, Tampa.

When Park Bank failed in 1986, the shareholders sued former officers of the institution, alleging violations of the Racketeering Influenced and Corrupt Organizations Act and securities laws. The FDIC sued the same defendants.

Judge Walter Hoffman, in the U.S. Court of Appeals for the Eleventh Circuit, rejected the FDIC's claim of precedence.

"Any such priority over third-party lawsuits will have to come from Congress, not this court," he said.

Magazine Workers Settle Suit Against Crestar Bank

Employees of *U.S. News and World Report* have settled their suit against Crestar Bank, Richmond, filed in federal court in November.

The magazine's workers charged that Crestar misled them about the performance of a real estate fund in which they had invested a portion of their 401(k) profit-sharing plan.

The suit also claimed that Crestar overstated the fund's ability to meet the cash demands of plan participants.

The workers also charged that Crestar blocked their attempt to withdraw $2 million from the fund in August.

A month later, Crestar announced its decision to close down the fund, but would not permit disbursements until all the assets were sold.

Under the settlement, Crestar will lend the real estate fund enough money to pay back the 130 plan participants before yearend.

High Court Ruling Sought On Pass-Through Liability

The Supreme Court has been asked to review a "flow through" liability case, in which a Houston bank was penalized for earlier criminal acts of an institution it acquired.

The attorney for Alamo Bank of Texas argued in his petition to the high court that flow-through liability may have a chilling effect on bank merger activity.

Alamo Bank of Texas merged with Central National Bank of Pharr, Tex., in 1987, and Central become a branch of Alamo. Later that year, Central National was indicted for violations of the Bank Secrecy Act that allegedly occurred four years before the merger.

Alamo was also named in the indictment as Central National's successor institution. A federal district court in Texas rejected Alamo's motion to dismiss the indictment.

Alamo was convicted and fined $750,000. But the court suspended $500,000 of the fine in lieu of three year's probation. The U.S. Court of Appeals for the Fifth Circuit affirmed the conviction.

Alamo is seeking a Supreme Court ruling on the flow-through aspect of the case.

The petition, prepared by Oppenheimer, Rosenberg, Kelleher & Wheatley Inc., San Antonio, argues that the Alamo decision "will have substantial adverse effects on the federal agencies with regulatory control over banking." ■

By JED HOROWITZ

No Takers for First Bank. First Chicago Corp. executives have made three recent trips to Minneapolis to scout First Bank System Inc. as a possible acquisition candidate, according to knowledgeable sources in the Midwest.

When First Bank cut its dividend in half in November, it virtually put a for-sale sign on the institution, sources in Minneapolis said.

First Bank's investment banker, First Boston Co., contacted the Chicago bank and other "preferred buyers" earlier this year but found no takers, bankers said. Now that First Bank's share price is hovering around $16 a share – down from its 52-week high of $26.875 – the bank may seem more attractive, the sources said.

A spokeswoman at First Bank said the two banks have a close correspondent banking relationship, but she would not comment on merger talks. A First Chicago spokesman had no comment.

First Bank acknowledged its problems last fall when it ousted chairman DeWalt "Pete" Ankeny, revealed some bleeding leveraged buyout loans, and announced a strategic refocus on middle-market corporate customers and consumers.

* * *

Shipley's Surprise. Long-simmering rumors about a merger between Chemical Banking Corp. and Manufacturers Hanover Corp. were rekindled last week when Thomas S. Johnson of Chemical was anointed heir apparent to Manufacturers chairman John F. McGillicuddy. But well-placed sources said there is no hidden merger agenda in the move.

Their chief evidence: Chemical chairman Walter V. Shipley, who had just returned from a two-week trip to the Middle East, did not learn of his lieutenant's plans until they were publicly announced.

At Manufacturers, Mr. McGillicuddy and his search committee took almost two years to name a new president and successor. Mr. Johnson, reportedly his first choice, was not approached until late November.

"My perception is that John didn't want to activate any attempt to get anybody until he had put the bank on a terrifically positive platform," Mr. Johnson said.

He credited his new boss with achieving that goal by raising new capital, reserving for LDC loans, and selling Hanover's CIT finance subsidiary.

For the record, Mr. Johnson was recruited by search firm Korn/Ferry International.

Citibank Scorns Card Prices. Despite Citibank's announcement on Tuesday that it would acquire First Chicago Corp.'s merchant credit card business, the New York bank has no plans to continue buying other banks' consumer card portfolios.

Although Citibank added $1.3 billion of receivables in the past year by purchasing consumer portfolios, it now thinks premiums for such purchases are too dear.

James Bailey, who heads the U.S. card products group, recently told analysts that Citibank can maintain its card growth of about 15% even with a projected downturn in the economy. It will rely on internal marketing to fuel the growth, he said.

Citibank paid a 26% premium last year to purchase $623 million of receivables from defunct First RepublicBank Corp. in Texas, but apparently has no plans to repeat the exercise.

Credit card business provided about 25% of profits for Citicorp in 1988 and should reach 30% this year, estimates Merrill Lynch analyst Judah Kraushaar. Mr. Bailey, who was on vacation, could not be reached for comment.

* * *

McCoy in Mac Land? The Federal Home Loan Mortgage Corp. was poised to name an 18-person board as Grapevine went to press, with Banc One Corp. chairman John B. McCoy on the list of financial heavyweights expected to be nominated.

Mr. McCoy and a Freddie Mac spokesman declined to comment.

Banc One recently purchased Weaver Brothers, a mortgage company in Chevy Chase, Md.

Freddie Mac, previously overseen by the defunct Federal Home Loan Bank Board, has been scrambling to assemble a high-powered board.

Other rumored candidates include James Montgomery, chairman of Great Western Bank; George Gould, former under secretary of the Treasury; and Miami mortgage banking mogul Jay Kislak.

U.S. Banks in Panama Reopen to a Lesser Role

By JAMES R. KRAUS

NEW YORK — U.S. banks in Panama reopened for business on Thursday for the first time since the U.S. military strike against the regime of Gen. Manuel Antonio Noriega.

But with Panama's economy in shambles, bankers said it would take months, if not years, before the country regains its position as a regional and international financial center.

Many banks, they noted, had already sharply reduced the amount of business they did in Panama because of the U.S. economic boycott imposed last year.

"Everybody's had to keep a pretty low profile over the past couple of years," said Kevin Mulvaney, interntional banking group executive at the Bank of Boston.

"Companies haven't been bringing in capital because there's been an economic war going on between Panama and the United States," he said.

Meanwhile, authorities have frozen assets in French bank accounts belonging to the deposed Panamanian leader and his family, United Press International reported from Paris.

Judge Patrick Fievet, an investigating magistrate at the Paris Tribunal, ordered the measure following the opening last Friday of a judicial inquiry into possible laundering of illegal drug profits.

The assets frozen amount to between $3 million and $4 million held in accounts at Banque Nationale de Paris and the Credit Industriel and Commercial. Some of the money apparently was en route to Switzerland or Luxembourg when it was blocked by French authorities.

Other checks on French bank accounts are under way in connection with Mr. Noriega's assets, and two Panamanian embassy officials may be charged in the case, UPI reported.

The Bush administration this week lifted tough economic sanctions imposed on U.S. banks and corporations

Electronic Data Interchange Is Poised To Become a Crucial Competitive Tool

By RICHARD LAYNE

OUTLOOK 1990
Fourth in a series

NEW YORK — A new technology that could redefine the way banks deal with corporate customers appears ready to blossom in 1990. But whether banks will parlay this technology into increased cash management fees, or lose those revenues to nonbank competitors, remains to be seen.

The technology is called electronic data interchange, or EDI. It allows corporations to replace purchase orders, invoices, and other paper trade documents with electronic, computer-to-computer communications.

Hundreds of U.S. corporations are following the lead of EDI pioneers such as General Motors Corp., Sears, Roebuck and Co., General Electric Co., and Bergen Brunswig in eliminating paper and speeding up business communications to save millions of dollars in administrative expenses.

Many bankers are looking to EDI as a source of growth for their existing cash-management and funds-transfer services, but first they have to understand how the technique is evolving in many companies and industries.

"You can't avoid EDI if you are a corporation - not if you want to be competitive," said John Shortsleeve. He is assistant treasurer for General Electric, one of the biggest users of EDI.

Thrifts Get Rules On Lending Limits

By ROBERT TRIGAUX

WASHINGTON — In response to widespread confusion among thrifts, the Office of Thrift Supervision issued guidelines Thursday to help them comply with new lending limits to borrowers. The guidelines are in effect until the federal thrift regulator issues a final rule.

The guidelines provided details on compliance, and represented no substantial change of course from the thrift-bailout legislation signed into law in August. Thrifts have been clamoring for a loosening of the lending limits, so far with no results.

The law required a thrift for the first time to set a cap on the amount of loans

Campeau's Fate Hammered Out At Bank Parley

Alternatives Considered To Forced Bankruptcy

By LISABETH WEINER
and DAVID NEUSTADT

Bankers representing about 75% of the $2.34 billion in loans to subsidiaries of Campeau Corp. met Thursday in New York as the fate of the troubled retailing company hung in the balance.

It was not immediately clear which of several options the bank group will take. Sources said one possibility would be to accelerate Campeau's loan payments.

"That would precipitate a Chapter 11 filing by Campeau because the company doesn't have the available cash to pay off its loans," said a Japanese banker in the Campeau syndicate.

Default as Bargaining Tool?

Citibank, agent on the loan syndicate, hosted the meeting at its headquarters. Citibank has already notified Campeau that it breached one covenant of the loan, and would be in default unless it meets certain reporting requirements by Sunday. Officials of Campeau and Citibank did not comment on the discussions.

Campeau might be able to use the default as a bargaining tool. A default would reopen the loan agreement, allowing the banks to ask for changes in collateral, pricing, and other terms.

Some bankers think that Campeau might be better off after a bankruptcy filing. The company would then not have to pay interest on its huge debt, and would have plenty of cash to fund

Reflections of a Financial Executive

What's My Line?

By THOMAS CLAIRE

Professionals in the field of finance are often stereotyped, be they brokers, bankers, or treasurers. This poem, submitted by a reader, strikes a note for all those who yearn to be known for themselves, not the image they represent.

If we should happen during
the cocktail hour
upon a chance encounter

and engage in polite
conversation,

should you ask me:
"What do you do?"

What should I do?

Should I style
myself a composer
whose notes
are words
that float
delicate
as crystal
motes
upon the
amber
August
air;

Should I picture
me a painter
plucking
pigments
of pastel
and terracotta
from his palette
to depict
the landscape
of the psyche;

Should I suggest
that I'm a teacher
whose lessons
are designed
to guide and inspire
without
the classroom wall;

Should I admit
that I'm a poet
whose lifelines
flow
from the flux
of night?

And if I take you
into my confidence,
dare I confess
the bare fact:

I'm treasurer
of the world's
largest luxury goods
society?

And if I do,
will you be
taken in,
fooled by the
sound of
the facade?

And see dollars and cents,
pin-striped vests,
fat-cat bankers,
with snipped cigars
and numbered Swiss accounts;

rubies and pearls,
emeralds and amethysts
strung like colored lights
across the continents;
casks of cognac
and champagne
uncorked end to end
from Chicago to
Hong Kong;

steamer trunks
packed with exotic
fragrances to delight
and stimulate
the senses?

Or will you see
past my front
to the truth
beyond:

That the treasures
I safekeep
are safe deep
within
and rarer still;

that the spirits
and fragrances
I imbibe
are distilled
from essential oils;

that life's richest
luxury lies in
the simple
surrender
of the senses;

and that in
all this world
the only society
I seek is that
of the
enlightened soul?

Mr. Claire is treasurer of Moet-Hennessy U.S. Corp., New York.

Funny Money

By TOM LEANDER

Smile!

Life as a media celebrity did not agree with a suspect in a string of automated teller machine thefts, who surrendered himself to police this week after a mere 15 hours in the limelight.

William Robinson, 20, called police in Rochester, N.Y., shortly after his photo appeared on Tuesday's local six o'clock news shows and in a Rochester newspaper. He turned himself in about 3 a.m. Wednesday, police told United Press International.

The photo was a self-portrait in a way, snapped by an automatic camera Nov. 16 while Mr. Robinson was allegedly using a stolen card to withdraw $800 from an ATM. The ATM card belonged to a University of Rochester medical student, who had been abducted shortly before the alleged ATM theft.

Mr. Robinson was not immediately charged in connection with the abduction, pending further investigation. He was arraigned on charges of grand larceny, petty larceny, and unauthorized use of a motor vehicle.

No Rudolph

The folks at U.S. National Bank of Oregon had one question last week: Where is Rudolph the Red-Nosed Reindeer when you really need him?

The bank and Transwestern Helicopters, an Oregon helicopter manufacturer, had arranged for Santa to take to the skies and visit four Oregon cities to distribute toys to needy children. But dense fog forced Santa to give up on the chopper ride and take a van.

"The visuals are not as great as they would have been," a bank spokeswoman conceded.

◦ ◦ ◦

Credit Phobia?

Texas' bank market often is hailed by new entrants as rebounding and bursting with opportunity. That's a bright view, considering the energy and real estate nosedives the state's economy took in the last half of the '80s.

But an ad by NCNB Texas National Bank indicates that not all Texans share the optimism of their new bankers. Temporarily veering from pictures of gleaming new boats and cars, NCNB Texas asks a gut question: "Are you afraid to ask for a loan?"

— **Steve Klinkerman**

Resting on Laurels

For several years, ads for certificates of deposit from California-based Columbia Savings and Loan Association have declared in italics that the thrift is "one of America's best managed."

If they insist. But the ads continued to run after Columbia lost $226.3 million in the third quarter, chairman and CEO Thomas Spiegel quit, and regulators clamped tough operating restrictions on the thrift, one of the industry's biggest junk-bond investors.

The "best managed" tag line comes from a *Forbes* magazine survey a couple of years ago that so designated the then-high-flying Columbia, a spokeswoman said. The last ad carrying the line ran Dec. 12, she noted, the day after Mr. Spiegel's resignation.

— **Sam Zuckerman**

LETTERS TO THE EDITOR

Sallie Mae Bonds Not U.S.-Backed

To the Editor:

Your Dec. 11 article, "House Veteran Targets Off-Budget Enterprises" [page 6], contains a number of significant misstatements about Sallie Mae.

The piece states that we "borrow federal funds" and that our bonds are "backed by the full faith and credit of the federal government." Neither is true. Sallie Mae finances its operations by borrowing funds in the global capital markets. Its debt is not guaranteed or insured by the federal government; Sallie Mae voluntarily gave up a federal guaranty on its debt and stopped borrowing through the Federal Financing Bank about eight years ago.

The article also cites claims that Sallie Mae is subject to inadequate audit and oversight. The facts, again, indicate the contrary. Under our charter, Sallie Mae is subject to audit by the Treasury. We make an annual report to the President and the Congress and we are subject to congressional oversight. We are subject to the same regulations and audits as other participants in the Guaranteed Student Loan Program.

Sallie Mae is also broadly recognized as virtually unique among financial institutions in its asset quality and avoidance of interest rate risk.

Beth Van Houten
Vice President
Student Loan Marketing Association

Editor's Note: While Sallie Mae is correct that its borrowings are not backed by the full faith and credit of the federal government, the capital markets perceive an implicit U.S. guarantee behind Sallie Mae. This allows for a lower cost of funds.

Japan Cutting Loan Growth

TOKYO — The Bank of Japan has asked the nation's 13 city banks to cut the growth in their new lending by 14.7% in the first quarter of 1990 from the growth level a year ago, a senior official of the nation's central bank said Thursday.

Traders had expected a double-digit figure as they believed the central bank wanted to signal its anti-inflationary stance at a time when the Japanese economy keeps expanding robustly despite three discount-rate hikes earlier this year.

The growth in new loans by these major commercial banks was cut by 7% in the fourth quarter this year and by 4.7% in the third quarter.

With the latest measure, the Bank of Japan hopes the commercial banks will exercise more discipline in their lending, the central bank official said. Japan's three long-term credit banks were also asked to reduce lending growth.

— Reuters

Dollar Sinks Against Mark

FRANKFURT — The dollar was fixed Thursday at its lowest level against the West German mark since May 11, 1988, after West Germany's central bank failed to intervene on foreign exchange markets here to support the U.S. currency.

The dollar was fixed sharply lower at 1.6791 marks Thursday, down from 1.6895 Wednesday, dealers said.

Analysts said that expectations of a fall in U.S. interest rates, good economic prospects, and expectations for firmer interest rates in West Germany pushed up the West German mark.

According to a Reuters poll of currency analysts, the dollar is likely to enter the next decade by staging a modest recovery against the mark but is expected to continue to lose ground against the yen.

Forecasters predicted that the dollar would strengthen to 1.80 marks while falling to 135 yen by the fourth quarter of 1990.

"We expect the dollar to decline against the yen but recover against the mark by the fourth quarter of 1990," said Rupert Thompson, U.S. economist at UBS-Phillips & Drew, a London brokerage house.

Moody's Downgrades Mitsui Debt

NEW YORK — Moody's Investors Service has downgraded the senior debt rating of the Mitsui Bank Ltd. as well as the rating of the bank for long-term deposits, to Aa3 from Aa2.

The agency also confirmed Thursday the long-term ratings of the Taiyo Kobe Bank Ltd. at Aa3.

In Moody's ratings, high-grade bonds are rated Aaa (the best) and Aa. Within the Aa rating, Aa1 is the strongest rank. Bonds below Aa are considered medium-grade or lower.

The two banks are scheduled to merge on April 1. Moody's said its decisions were based on the riskiness in merging two large banks.

The rating agency added that integrating the two banks is likely to be a prolonged process and that their combined operating performance could well be softer than the banks are expecting.

As of Sept. 30, the two banks held combined assets of $402.8 billion.

Venezuela Economy Contracts

CARACAS — Venezuela's gross domestic product contracted by about 8% in 1989, according to preliminary estimates announced by the president of the country's central bank, Pedro Tinoco.

This year's drop in the GDP, which is the broadest measure of goods and services produced in the economy, was in contrast to 6.3% growth in 1988.

"The year 1989 has been hard and difficult due to the severe adjustment process that our economy had to bear to correct grave and profound imbalances," Mr. Tinoco told a news conference Thursday.

World Bank to Lend $1.35 Billion to Poland

By **ROB WRIGHT**
World Bank Watch

NEWS ANALYSIS

WASHINGTON — World Bank president Barber Conable's announcement that the bank plans to lend Poland $1.35 billion in the next 18 months shocked some close observers in the private sector. But the bank maintains that the amount authorized – Warsaw's first pipeline ever at the bank – has long been pegged at $1 billion or more and has not been increased lately.

If Mr. Conable's prediction comes true, Poland would quickly become one of the bank's major borrowers. Although a member of the bank since 1986, Warsaw has so far been unable to receive any loans because of its lack of an agreement with the International Monetary Fund.

But sources say that once the IMF announces it has come to terms with Warsaw, the bank will respond rapidly with its first two loans. One loan would extend $250 million for export development in Poland's chemical, wood products, and machinery industries, with $100 million following to modernize the nation's agro-industries, again with an eye on export potential. Those two loans could reportedly be released in the next 30 days as part of a fiscal 1990 Polish pipeline now estimated at $600 million to $1 billion.

"That's a quantum leap from what we had been expecting," said one highly placed financial industry source, who last month assumed Poland would get a mere $300 million from the bank. "[Bank officials] seem to be bringing forward all kinds of projects all of a sudden that they've had on the shelves. But you have to wonder if the Poles can absorb all this money. You have to be prepared, and where's it all going to go?"

> Sources say that once the IMF announces it has come to terms with Warsaw, the bank will respond rapidly with its first two loans.

This source, who requested anonymity, attributed the increase to "massive pressure" from bank donors to move money into Poland. The IMF staff, the observer said, was "just about steamrollered" by the United States and Western Europe into approving a program for Poland, making the subsequent bank package "very, very risky."

Bank spokesmen, though, say a huge pipeline has been under consideration for Poland for several months, and insist donor pressure is not a factor.

The bank's latest loan catalog lists only $710 million in pending loans for Poland. Another well-informed private sector source, however, said that figure meant little, since rapid changes in the new Polish government were turning the bank's efforts to put together a lending program into "chaos."

Quick Influx Planned

Bank officials say a $300 million structural adjustment loan, which is not yet listed in the bank's official documents, is in the works for mid-1990. "SALs," which provide a quick influx of cash for countries with balance-of-payments woes in return for promises of market-oriented macro reforms, have become a hallmark of the bank's programs in Africa and Latin America in recent years and are becoming the rage in Eastern Europe, too.

Early next year Yugoslavia expects a $300 million structural adjustment loan, the second it will have received from the bank. And recently the National Bank of Hungary's deputy president, Imre Tarafas, who represents his country on the bank's board of governors, was in Washington trying to revive stalled negotiations on Hungary's first SAL, which is estimated at $200 million.

U.S. Banks in Panama Reopen to Lesser Role

▸ Continued from Page 1

doing business in Panama. The sanctions tightly restricted dealings with the Panamanian authorities and prohibited U.S. banks and corporations from paying taxes to Mr. Noriega's government.

On Wednesday, Panama's new government ordered the banks to reopen but said that business hours would have to be curtailed.

The government added that a freeze on time deposits and savings deposits imposed by the Noriega regime in March 1988 would be temporarily maintained to ensure bank liquidity.

According to a Citibank spokeswoman, business at the bank's branches in Panama was normal on Thursday, with deposits roughly equaling withdrawals. Citibank and Chase Manhattan Bank are the two largest U.S. banks in Panama with nine branches each.

Sanctions Prompt Departures

The U.S. economic sanctions and the resulting downturn in Panama's economy had already prompted some U.S. banks to leave and others to reduce their presence during the past 18 months.

Among the banks that have closed their operations in Panama are Republic National Bank of New York, First National Bank of Chicago, and Bankers Trust Co.

"We made a decision to close the bank because of the inhospitable business environment," said a spokesman for Republic National.

Citibank reduced the number of its branches from 11 to 9, while First National Bank of Boston closed its branch in the Colon free-trade zone, but retained its office in Panama City. It also transferred its Central American regional headquarters from Panama City to Puerto Rico.

Marine Midland Sold Branch

Another U.S. bank, Marine Midland Bank, sold its branch in Panama to its parent company, the Hongkong and Shanghai Bank, as part of a worldwide restructuring.

Other U.S. banks with offices in Panama are Philadelphia National Bank and American Express Bank Ltd.

U.S. banks provide retail banking to Panamanian nationals or U.S. troops and their families stationed in the Canal Zone. They also provide wholesale banking services, such as loans and commercial letters of credit to large U.S. multinationals with offices in Panama.

None of the U.S. banks have so far been linked to money laundering operations or accounts held by General Noriega.

According to to the Associated Press, $5.82 million belonging to Noreiga has so far been confiscated by U.S. authorities and released to the new Panamanian government. ■

Real Estate Sales Are Not at Top Of RTC's List

By BARBARA A. REHM

NEWS ANALYSIS

WASHINGTON — A day after releasing his agency's grand plan for running the thrift industry rescue, Daniel P. Kearney admitted there is some confusion about just which assets the Resolution Trust Corp. will be able to sell quickly.

"People shouldn't make the leap that because we have $104 billion in assets it's all real estate," Mr. Kearney, president of the RTC Oversight Board, said in an interview Thursday.

Indeed, first on the agency's quick-sale list are assets other than real estate, such as government securities, mortgage-backed securities, and mortgages. These assets make up at least $50 billion of the $104 billion total.

There is a ready market for the government securities and the mortgage-backed securities. And the Oversight Board currently is working on a deal with the Federal National Mortgage Association to guarantee the mortgages, Mr. Kearney said. Once backed by Fannie Mae, the securitized mortgages could be sold easily.

Contradicts Reports

Mr. Kearney predicted that most of the $50 billion in marketable assets will be sold within the year, as well as some real estate. He contradicted newspaper reports Thursday that quoted him as saying the RTC hopes to sell about $10 billion in seized thrift assets by 1992.

The confusion arose because Mr. Kearney declined to estimate asset sales volumes at a press conference Wednesday, and was then asked if 10%

Trouble on the Home-Equity Front

Sources: SMR Research, American Bankers Association

Home-Equity Lending Tightens As Property Values Head Down

By YVETTE D. KANTROW

NEW YORK — After a three-year marketing push that made home-equity loans one of the most popular forms of consumer credit, bankers are beginning to tighten lending standards to protect against declining property values.

Delinquency rates on the estimated $100 billion in home equity lines of credit are already on the rise, particularly in economically hard-hit areas of New England and the Southwest. The trend is prompting lenders to emphasize borrowers' ability to repay rather than their homes' appraised values.

At the end of the third quarter of 1989, 0.93% of open-end home equity lines were at least 30 days past due, according to the American Bankers Association. While this delinquency rate is low compared with other types of consumer loans, it had risen by one-third from the 0.68% rate at 1988's end.

Lenders 'More Selective'

"There has been some tightening of some policies that is due to the northeastern scare, which is yet to be shaken out," said Paul Fritts, director of the division of supervision at the Federal Deposit Insurance Corp. "Those that are in the business will not stop making loans, but they may become more selective."

Most lenders remain confident that home equity loans, because they are secured by residential property, will continue to be among their safest and most profitable assets.

"It's an excellent loan for a bank to make," said James Maynor, president of First Union Home Equity Corp., Charlotte, N.C. In addition to giving a lender high-yielding assets, home equity loans are considered a primary source of cross-selling opportunities.

But some observers are more bearish. HSH Associates, a publisher of mortgage market information, is predicting that lenders will start to flee the home equity business in 1990.

'Things Are Slowing Down'

"It's not going to be a massive trend, but things are slowing down," said Paul Havemann, vice president of the Butler, N.J., firm. "Home equity is not the pot of gold everyone thought it was."

HSH surveys home equity lenders

Fed Set to Flag Banks Showing Big Cash Flows

Program Seeks to Thwart Drug-Money Laundering

By ROBERT M. GARSSON

WASHINGTON — In an effort to help law enforcement agencies spot money launderers, Federal Reserve Board Chairman Alan Greenspan said the central bank would start identifying individual banks that generate large cash surpluses.

The new program is being developed in response to a request by Rep. Frank Annunzio, D-Ill., chairman of the House Banking subcommittee on financial institutions. In a Nov. 27 letter, Mr. Annunzio said the large cash surpluses at some Fed branches are an indicator of illegal activity. He urged the central bank to develop a system to monitor cash flows on a bank-by-bank basis.

"It is a cash flow polluted by drug money," he said.

Cooperation Noted

Mr. Greenspan, in a letter to Mr. Annunzio released Thursday, said his agency had initiated "a program of closer cooperation" with enforcement agencies, in particular, with Treasury's Financial Crimes Enforcement Center.

"Detailed procedures have not been established – including for example, when, how, and by whom depository institutions would be contacted about unusual currency activity," he said. "But I am confident that a more effective program will emerge from this effort."

The initial reaction from the banking industry was positive. "The concept of getting us more information on cash

Argentine Banks End 6-Day Closure

BUENOS AIRES — Banks and exchange rate dealers opened Thursday for the first time in six days after the Peronist government ordered drastic monetary reforms to reduce the amount of currency in circulation.

The Buenos Aires bourse will remain closed till Tuesday due to the monetary restrictions, a Bourse communique said.

Economy Minister Antonio Erman Gonzalez announced Monday that the government will give depositors long-term, dollar-denominated bonds for their short-term deposits.

Foreign bankers estimated that short-term liabilities totaled about 80% of their overall liabilities and expressed concern that they would be unable to collect on their loans.

The new anti-inflation measures are intended to make the Argentine currency, the austral, scarce and to strengthen its value against other currencies.

Bank closures and the government's decision to force depositors to accept long-term bonds for short-term time deposits triggered a cash crisis that has crippled Argentine business activity.

Brady Debt Plan May Aid Nigeria

LONDON — Nigeria could become the first African nation to benefit from U.S. Treasury Secretary Nicholas Brady's debt-reduction plan if it negotiates a new agreement with the International Monetary Fund this spring, bankers said.

Nigeria's current $584 million standby credit agreement with the fund expires in April. Some have speculated that Nigeria will try for a three-year, extended fund facility of as much as $2.5 billion in the new negotiations.

"They will be looking at what's going on in Latin America and thinking, 'We might like some of that,' " one banker said.

Central Bank Revamping Promised

LUSAKA, Zambia — Jacques Bussieres, a Canadian appointed governor of the Central Bank in December, arrived this week in Lusaka, the capital, and promised to reorganize the bank's operations.

"My role will be to help improve the structure and organization of the Central Bank in order to let it play its full role in the economic policy of the Zambian government and its full role as a central bank," he told Reuters.

President Kenneth Kaunda appointed the Canadian to the post after firing a Zambian citizen, Francis Nkhoma, amid allegations of corruption. Mr. Nkhoma has denied the allegations in court.

— Reuters

Added IMF Aid Expected for Poles

WASHINGTON — The International Monetary Fund will probably consider an extended loan for Poland sometime in the second half of this year, a senior international monetary official said.

The official, who asked not to be identified, said such additional funding for Poland "would make sense." The IMF considers it imperative that international support for Poland be continued, the official said, adding that the IMF stood ready to give whatever aid it could, both financial and technical.

The IMF executive board is expected to approve a $715 million loan for Poland in the next few weeks, an action that will allow additional credits to be made.

The official said the funding slated for Poland this year "appeared adequate for the country's needs." The aid will allow Poland to make up a $3 billion current account deficit expected this year, he said.

The U.S. Treasury announced earlier this week that industrial nations had completed an emergency bridge loan for Poland of as much as $500 million to help cushion the blow of a tough economic austerity program, pending approval of the $715 million IMF credit.

U.S. Banks Lead Global Syndication

Citicorp Is No. 1 as Loans For Takeovers Swell Totals

By JOHN EVANS

LONDON — American banks, bolstered by financings for the flood of U.S. mergers and acquisitions, remained the leading force in global syndicated lending in 1989. And Citicorp again ranked as the single most active bank in arranging such transactions.

A total of $352.4 billion was raised on the international syndicated lending market last year, including about $50 billion of U.S. acquisition and bridge-financing transactions, against $327.9 billion in 1988, according to a compilation by *International Financing Review,* a British financial magazine affiliated with the *American Banker.*

Citicorp acted as lead manager on 100 loans with an aggregate value of $83.66 billion. The money-center bank took a similar No. 1 ranking in 1988, when it syndicated 75 loans valued at $56.2 billion – heading the several hundred banks worldwide that are active in international lending.

Second-ranked for 1989 is Manufacturers Hanover Trust Co., which arranged 93 loans worth $79.56 billion, after taking third position the preceding year.

In what bankers described as an "aggressive" drive in rebuilding its lending business worldwide, Bank of America moved swiftly up the rankings, capturing third place, with 92 loans totaling $63.5 billion. It ranked 13th in 1988.

The provisional IFR data did not break out the volume of loans by each bank that was acquisition-related, but all three attributed part of their high rankings to major buyout financing in the course of the year.

Citicorp's transactions included the $14 billion term loan for Paramount Communications Inc. in its assault on Time Inc. Bankers Trust New York Corp. and Manufacturers Hanover handled the competing $8.4 billion of financing assembled by the media group.

Citicorp's financings also included the $2.3 billion term loan raised by Britain's C.H. Beazer Holdings PLC to acquire Koppers Inc.

Overall, $58 billion of its transactions last year consisted of loans of $1 billion or more, Citicorp officials said.

At Manufacturers Hanover, officials noted it was centrally involved in the $25 billion leveraged buyout by Kohlberg Kravis Roberts of RJR Nabisco Inc.

Bank of America similarly sold to banks overseas participations in buyout deals for Tyson Industries, a transaction totaling $1.4 billion, and for Georgia-Pacific Corp., a $3.2 billion financing.

Bankers believe that, with regulatory warnings in both the United States and Britain over the danger of excessive exposures by banks to highly leveraged transactions, the international syndicated lending markets in 1990 will see a declining volume of corporate restructurings. ■

Bank Syndicate Puts Bond Corp. on Defensive

By JOHN EVANS

LONDON — One of Australia's biggest companies, Bond Corporation Holdings Ltd., is struggling to survive under a debt burden totaling $5 billion and legal action by U.S. and other bank creditors to put part of the business empire into liquidation.

A syndicate of eight lenders, including First National Bank of Boston and Pittsburgh National Bank, has already requested the appointment of receiver-managers for Bond's Australian brewing interests. The syndicate, headed by National Australia Bank Ltd., is owed $580 million. It took action after loan covenants were breached, a spokesman for the banks said.

The bank group includes Hongkong & Shanghai Banking Corp., owner of Marine Midland Bank. The Hong Kong-based bank is the Bond group's largest single creditor, with outstanding loans of about $790 million.

Another syndicate member, Standard Chartered PLC, has total exposure to the Bond group of about $480 million, although the British bank is "content with the security we have against the loans," according to officials in London.

Bond Corp., controlled by entrepreneur Alan Bond, is appealing to the Supreme Court of Victoria in Melbourne to overturn the appointment of receivers to its brewery operations – action that it fears could topple the entire corporation.

The group is concerned that other creditors might follow the lead of the breweries' bankers and call in their loans, officials indicated.

Bond Corp. executive director Peter Lucas was quoted by Reuters as saying: "If other bankers follow, then I am afraid that the battle by Bond executives to pursue an orderly disposition of its assets will run into a series of barriers which may just be too much for us."

Bond's lawyers asked the Melbourne court earlier this week to complete any cross-examination of Bond Corp. director Peter Mitchell as quickly as possible to allow him to fly to New York to meet U.S. creditors on Friday.

Other U.S. investors who hold Bond debentures worth about $630 million, issued for a corporate acquisition in 1985, account for most of the rest of the breweries' debt of about $1.2 billion.

The breweries were due to make a $52 million interest payment to American investors on Dec. 31. Bond Corp. said that, although it had the money ready, the bank syndicate blocked payment. ■

COMMENT

Plains Indians Inspire Training Program

By SUE MIZE
Vice President
Citizens Fidelity Bank

THE Lincoln Savings and Loan scandal is almost as confusing as the Abbott and Costello "Who's on First?" routine. It's hard to tell where the players are and what they did or did not do.

As best I can tell: Keating is blaming Gray; Gray is blaming Wall and some senators; Wall is blaming Gray and the San Francisco regulators; the senators are blaming the Greenspan study and the federal regulators; and the federal regulators are blaming an accounting firm.

I couldn't help but notice that nobody said, "The buck stops here." Where is Harry Truman when we need him?

But the buck has got to stop somewhere. Maybe it should stop with our 1980s' culture, summed up by the bumper sticker "He who dies with the most toys wins."

This attitude is pervasive and best exemplified by a television commercial showing a driver of a Mercedes dejected and ashamed because he has been left at a red light by the driver of a Rolls-Royce. A culture that bombards us with these kinds of messages has to assume some responsibility when we lie, cheat, and steal in order to live up to its expectations.

It might not be so bad if we could achieve fulfillment by living up to these expectations and possessing all the right toys. But we can't. The culture is lying to us, and those lies are making us physically, mentally, and morally ill.

> We need to ask ourselves, Would we rather be working on collecting meaningless toys that, in the end, make us feel insecure, or would we rather be working on making our spirits whole?

Compare what our culture tells us with what the Plains Indians' culture told its members. The following is from Hyemeyohsts Storm's book, "Seven Arrows":

"Our spirit can be made whole only through the learning of our harmony with all our brothers and sisters and with all the other spirits of the Universe. To do this we must learn to seek and to perceive.

"The Vision Quest is the way we must begin this search. We must all follow our Vision Quest to discover ourselves, to learn how we perceive ourselves, and to find our relationship with the world around us."

After we make this comparison, we need to ask ourselves, Would we rather be working on collecting meaningless toys that, in the end, make us feel insecure, or would we rather be working on making our spirits whole?

At Citizens Fidelity Bank we think the Plains Indians were onto something important. So we are offering developmental workshops that allow people to make their vision quest.

One workshop helps people clarify their value systems. Several others allow participants to find out how they perceive themselves and how they are perceived by others. In another, participants discover the particular defenses they use ineffectively and unnecessarily to protect themselves.

There is a workshop in which employees complete a rope adventure course 30 feet off the ground. At that height they discover the exhilaration that comes with facing fears. In still another, participants complete an obstacle course on the ground with team members. The experience is one of warmth, security, and the connectedness that comes from being in harmony with others.

In each of these workshops the participants gain self-awareness, self-respect, and the courage to continue their own individual quest.

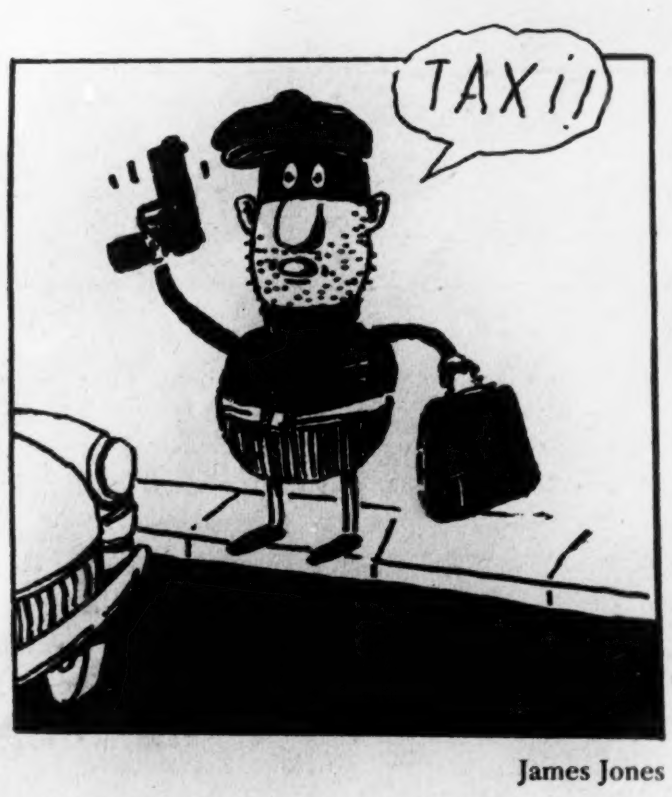
If your bank isn't offering developmental workshops like these, request them from your training director. In the meantime, start your own program. See Woody Allen's new movie, "Crimes and Misdemeanors" and read Carol Pearson's book "The Hero Within." Then talk to your friends about your quest instead of your toys.

If enough of us do this, we will create a culture free of Lincoln Savings and Loan look-alike scandals. After all, eventually the buck stops with us. ■

Ms. Mize is manager of training and development at Citizens Fidelity Bank, Louisville, Ky.

Funny Money

By TOM LEANDER



James Jones

Cabbie's Tip

Apparently relying on raw nerve rather than flawless planning, a bandit in Albany, N.Y., asked a cabbie to take him to a branch of First American Bank last Friday, then told the driver to wait at a nearby site while he robbed the bank.

After the bandit hopped out, driver Carl Olson Jr. immediately drove to the nearest phone booth and tipped off the police, who sped to First American. But they were too late: the bandit had disappeared after robbing the bank of $10,000; he told a teller he had a concealed weapon. Police are still searching for the robber.

∘ ∘ ∘

Superlative

The New York-based investment banking group of Japan's Mitsui Bank Ltd. pushed hard last year to enter the U.S. asset-backed and mortgage-backed securities market. It may have learned a lesson or two in Madison Avenue hyperbole in the process.

Masayoushi Abi, a senior vice president who runs the U.S. group, says the bank is actively marketing products dubbed Super CMOs and Super ABs to its clients.

How do they differ from traditional collateralized mortgage obligations and consumer-receivable-backed securities?

"They don't," Mr. Abi said. "But it sounds nice."

∘ ∘ ∘

More Chills and Thrills

In 1989, it seemed that everyone had plenty to worry about when it came to the nation's thrifts.

And the troubles are not over yet.

According to Alan Caruba, a journalist and public relations man who founded an organization last year dubbed the National Anxiety Center, there's enough trouble left in thrifts to give the nation fits well into the 1990s.

In a statement to the press on New Year's Day, Mr. Caruba rated problems created by irresponsible thrift officers alongside such other continuing causes of woe as computer viruses, junk bonds, cruise missiles, and Mediterranean fruit flies.

∘ ∘ ∘

Room Service

While the federal government has not had a stellar record regulating thrifts and banks, it may have found a niche where it can compete toe to toe with private entrepreneurs.

Under new management

Contrary to what the former owners of the Phoenician Hotel in Scottsdale, Ariz., are saying, the government appears to be doing an adequate job of running the 130-acre, 600-plus-room resort.

Bookings are up since the Resolution Trust Corp. seized 55% control of the hotel in November and eventually booted out manager Charles H. Keating Jr., according to Alan Whitney, a spokesman for the agency. Mr. Keating lost the hotel as a result of the April collapse of his California thrift, Lincoln Savings and Loan Association.

Mr. Whitney said the hotel is 85% to 90% occupied and that bookings will be up in January, February, and March.

Employees of Mr. Keating say some big groups have canceled meetings at the hotel since their boss lost control.

"We're aware of no cancellations," said Mr. Whitney. He said conventioneering Mercedes Benz dealers sent the hotel a letter recently congratulating it on improved service.

A Grim Omen for Brady Plan?

Mexican Bond Deal May Spell Debt-Reduction Trouble

By JAMES R. KRAUS

NEWS ANALYSIS

NEW YORK — A U.S. proposal to sell zero-coupon bonds to Mexico at below-market prices may signal deeper problems ahead for other debt reduction agreements under Treasury Secretary's Nicholas F. Brady's Third World debt plan.

The Mexican deal was supposed to be the first of a series of debt-reduction agreements aimed at trimming the Third World's $1.3 trillion debt. But banks were unwilling to make the additional loans called for by the agreement.

Analysts said the proposed bond issue is a subsidy that Treasury cannot afford to grant to other Third World countries. Political opposition will likely stymie any such efforts. Without subsidies, they added, debt-reduction agreements with other countries are unlikely to succeed.

'Desperate Attempt'

The proposed bond sale was characterized as "a desperate political attempt to keep a fatally flawed deal intact" by Christopher Whalen, a political consultant in Washington with Wires Ltd.

Washington insiders said Monday that the proposals, first reported in *The Wall Street Journal,* showed that weeks of administration efforts to convince banks to grant Mexico more favorable terms had failed, forcing the Treasury to make up for the shortfall in the collateral.

According to the *Journal*, the Treasury has agreed to sell Mexico $36 bil-

Curbs on 2 S&Ls in California Indicate Harsher Stance Than Taken Elsewhere

By SAM ZUCKERMAN

NEWS ANALYSIS

SAN FRANCISCO — The operating restrictions imposed by the Office of Thrift Supervision on two large capital-deficient California thrifts are the harshest moves yet in a national crackdown on the more than 800 institutions that fail to meet the tough capital standards of the federal bailout law.

In the next few weeks, the OTS's 12 district offices plan to mail letters to all capital-deficient thrifts formally notifying them of bans on asset growth, according to OTS spokesman William Fulwider.

The bailout law passed last August call for growth restrictions on capital-deficient thrifts, pending government approval of business plans outling how and when minimum standards would be met. The deadline for filing such plans was Monday.

Halt All Loans, No Dividends

The OTS late Friday ordered Imperial Savings Association, San Diego, and Santa Barbara Savings and Loan Association, Santa Barbara, Calif., to halt all lending and investment operations indefinitely. They also are banned them from taking uninsured deposits, paying dividends, and granting executive bonuses.

The two thrifts can still take deposits, but may add no new assets except

Midwest Expected To See More Deals For Banks in 1990

By GORDON MATTHEWS

NEW YORK — After a year of sluggish merger activity, bank acquisitions in 1990 will likely be focused in the Midwestern industrial states, the only region where premiums paid over book value are still rising, analysts said.

The rising premiums reflect pent-up demand for Midwest banks as the region's economy turns around from a decade of decline, said Katherine R. Hensel, an analyst for Shearson Lehman Hutton Inc.

Since the stock market crash of October 1987, the median premium in the Rust Belt was 1.89 times book value, 15% greater than the regional ratio of 1.65 from 1985 through Sept. 30, 1989, according to Shearson. Until recently, the Midwest had lagged behind much of the East Coast in the pace of

Clarke Warns Retail Loans Are Vulnerable

By JED HOROWITZ

NEW YORK — While real estate lending problems are of most concern to regulators and bankers, regulators are becoming increasingly wary about a surge in nonperforming consumer loans, Comptroller of the Currency Robert L. Clarke said Monday.

Mr. Clarke said his staff in Washington is analyzing data for the third quarter to determine how the deterioration in individual banks' consumer portfolios will affect the overall condition of the banking system.

Too Early for 'Crisis'

He said it is far too early to characterize consumer lending as in crisis, but regulators want to be sure it does not cause the next great loan-loss debacle.

"In other words, we are evaluating just how serious our concern should be," Mr. Clarke said in a speech to the

Who Benefits from Bank Acquisitions?

By SANFORD ROSE

CONVENTIONAL wisdom has it that if the criterion for the success of an acquisition is its impact on shareholder wealth, then it is better to be an acquiree than an acquirer. This observation seems nowhere more valid than in the banking industry.

According to "Analyzing Success and Failure in Banking Consolidation," a study just published by the Bank Administration Institute and prepared by FMCG Capital Strategies, acquisition has been a veritable godsend to shareholders of acquired banks.

Suppose that an investor had somehow been endowed with perfect foreknowledge of which banking companies among the 250 largest in the country were going to be acquired from 1982 through 1987. And suppose this investor had theoretically bought the stock of these banks in January 1982 and, as each bank was acquired, had reinvested his money in the stocks in the remaining banks that would subsequently be acquired, at the price prevailing for these banks at that time.

The investor putting $1,000 into stocks of the acquired institutions would have seen his investment grow to $5,200 by the third quarter of 1988. By contrast, if the same investor had put his money into stocks of those top 250 banks that were not subsequently acquired, he would have ended up with a portfolio worth only $2,605. In other words, shareholders of acquired institutions experienced a 420% gain whereas those of nonacquired banks had only a 160% improvement.

The shareholders of acquiring institutions have experienced much less happy results. In 1984 FMCG Capital Strategies analyzed some 26 banks among the top 250 that elected to spend over 10% of their equity capital on acquisitions in 1982. The firm found that by 1984, the stocks of these 26 acquiring banks – dubbed vultures – were trading at a 20% discount relative to those of a peer group of banks of similar size and geographic dispersion.

Updating this analysis, FCMG Capital Strategies found that by 1988, the stock prices of the 26 1982 vultures averaged only 61% of those of the peer group.

> 'According to "Analyzing Success and Failure in Banking Consolidation," a study just published by the Bank Administration Institute and prepared by FMCG Capital Strategies, acquisition has been a veritable godsend to shareholders of acquired banks.'

Nor is the disappointing stock-price impact of acquisition confined to the 1982 acquirers. The stock performance of the average bank that acquired from 1982 through 1986 worsened progressively each succeeding year after it made its acquisitions.

Thus one year after purchasing other banks, acquirers suffered a price discount equal to between 8% and 15% of the average of their peer group. Three years after acquiring, that discount ranged from 8% to 19%. And five years after acquisition, the average acquiring bank's stock-price discount amounted to nearly 30%.

Even more alarming, the vultures often end up being themselves acquired. Nearly half of the 1982 acquirers were subsequently taken over by other banks. And, very likely, the acquisition-induced weakness in their stock-price facilitated this cannibalization.

Half Fell Victim

Indeed, the pattern of cannibalization mirrors that of stock-price performance. That is, most acquirers are not immediately swallowed up. But after four years, the probability that the acquirer will be itself acquired is high and rising, reflecting its increasingly poor stock-price showing. Thus, while only 4% of the vultures of 1982 had themselves been acquired by 1984, by 1987 38% had disappeared, and by 1988 46% had fallen victim.

Notes the study: "If an acquiring bank knew for sure that the outcomes of the acquisition would be that its stock would trade at an increasingly larger discount to that of other banks and that five to six years down the road the chance of being itself acquired would be around 50%, then it would probably have thought twice about making the acquisition." ■

Crime Blotter

By TOM LEANDER

Luxury Cars Are Downfall For Officer at First Fidelity

A former loan officer of First Fidelity Bank, Newark, N.J., was sentenced Dec. 28 to 18 months in federal prison for making bad loans to the owner of a Manhattan nightclub in exchange for free use of imported luxury automobiles.

Antranig A. Arzoomanian, 47, of Alpine, N.J., wasn't required to pay restitution after U.S. District Judge Harold Ackerman found that he lacked the financial resources.

Mr. Arzoomanian pleaded guilty in October to falsely telling a fellow employee at First Fidelity's Paramus, N.J., office that he could authorize a $500,000 letter of credit to Neil Cohen, owner of the Ritz, a nightclub in Manhattan.

Prosecutors charged that Mr. Arzoomanian did not examine Mr. Cohen's financial records, offered him below-market interest rates on his loans, and allowed him to roll over the loans so that the principal was never repaid.

Mr. Cohen admitted to allowing Mr. Arzoomanian use of three Mercedes-Benz 450 SLs with free maintenance and repairs and selling a BMW to Mr. Arzoomanian's secretary for $3,000 less than its wholesale price in return for the loans.

Mr. Cohen, a New York resident, has been charged with receiving more than $4 million in loans from First Fidelity and failing to repay more than $3.1 million. He has pleaded guilty but has not been sentenced.

Ploy by Robbery Suspect Bombs at Citibank Branch

A man claiming he had a bomb inside a briefcase walked into a Citibank branch in uptown Manhattan last Wednesday, but bank employees did not believe him and wrestled the briefcase from his arms, police said.

Nirmal Singh, 30, a Manhattan resident, walked into a Citibank branch at 207th Street and Broadway shortly before 3 p.m. and allegedly told tellers he would blow up the bank unless they handed over $10,000, said police officer Frederick Weiner.

While an employee of the Citicorp subsidiary notified police, others tried to wrestle the case away from the man, Officer Weiner said. During the struggle, the case came open, revealing no bomb inside.

Mr. Singh was charged with first-degree robbery, Officer Weiner said.

Comptroller Offers Bankers An Antilaundering Primer

The Comptroller of the Currency has released "Money Laundering: A Bankers Guide to Avoiding Problems," a primer for bank officers and directors.

The booklet details often-used schemes to deposit, transfer, and retransfer large sums of money to conceal the criminal activity that generated them.

It also advises banks to beware of customers reluctant to go ahead with a transaction of more than $10,000 when told the deal must be reported to the federal government.

Banks wishing to obtain the booklet or get extra copies should write the Communications Department of the Office of the Comptroller of the Currency, Washington, D.C. 20219, or send a request by fax to (202) 447-0759.

'Condition Red' Helps Cops Nab Bank Robbery Suspect

Apparently desperate, the 67-year-old owner of a financially troubled helicopter transportation company allegedly robbed a bank in Vancouver, Wash., but was nabbed after a red-dye booby trap exploded, drenching his hands, weapon, and booty.

James Hamilton told Vancouver police after his arrest last Tuesday that his company, Greenleaf Helicopters, had been suffering financial difficulties. He also said he had recently been diagnosed as having cancer, which caused him to lose his pilot's license, impairing his ability do business.

Mr. Hamilton was being held without bail on a charge of first-degree armed robbery. Police said a teller at the Sterling Savings Association on Mill Plain Boulevard gave the robber an undisclosed amount of money, which had been fitted with an explosive dye-loaded device.

Mr. Hamilton was stopped by police a short time later in a nearby residential area. The red-stained money and pistol were on the front seat of his car. ■

Analysts See Midwest Focus For Bank Deals

➤ Continued from Page 1

bank consolidation.

"The Midwest economy has progressed, during the '80s, from our weakest regional economy, except Texas, to our strongest because of what some people see as the coming 'reindustrialization' of America," said Ms. Hensel. "We can expect to see the most merger activity there."

With Midwest banks now viewed as valuable franchises, premiums paid are rising, and competition to acquire those banks grows stronger, she noted.

While premiums are rising in the Midwest, they were lower in the major mergers announced last year, according to the *American Banker's* annual survey of mergers and acquisitions. (A list of the top 1989 mergers begins on page 10.)

Prices Rise; Premiums Fall

The top 10 deals last year carried an aggregate price tag of $7.5 billion, the survey found. That is well over the $4.5 billion for the 10 largest deals of 1988, but the comparison is deceptive in relation to premiums.

The largest deal unveiled last year was the $2.1 billion "merger of equals" between Sovran Financial Corp., Norfolk, Va., and Citizens and Southern Corp., Atlanta. It was announced after the failure of the $2.4 billion bid for C&S by NCNB Corp., Charlotte, N.C.

The second-largest transaction was not strictly a banking merger but the partial sale of a major asset, CIT Group, by Manufacturers Hanover Corp., New York, to Japan's largest banking organization, Dai-Ichi Kangyo Bank, Tokyo, for $1.3 billion.

More revealing than the aggregate price of deals is the fact that both the Sovran-C&S merger and the third-largest transaction, the acquisition of Florida National Banks, Jacksonville, by First Union Corp., Charlotte, are both being done at relatively low premiums.

The combination of Sovran and C&S will bring their shareholders a premium of about 1.6 times book value, and shareholders of Florida National, owner of a valuable franchise in a high-growth state, will get about 1.5 times book. The prices seem far removed from the heady days of 1985-1987, when deals valued at twice book value were routine.

Economy Hurts Premiums

Since then, except for the industrial Midwest, increasing economic worries have meant flat or lower premiums over book value for banks sold.

Nowhere has the falloff in premiums been sharper than in New England, where concerns over the real estate market have cast an economic pall. The median price there, once the nation's highest, has fallen 26%, according to Shearson.

In New England, the median premium has fallen to 1.73 times book since the 1987 market crash, from 2.33 times book, the highest price level in the country. (The 2.33 premium is the median for 1985 through 1989. Shearson was not able to break out figures for 1985 to 1987.)

The figures demonstrate how closely the fortunes of commercial banks in the United States remain tied to the health of local and regional economies.

The increase in Midwestern premiums "largely reflects export-driven strengthening in the region's economy," said Ms. Hensel of Shearson. The Midwest industrial states surveyed were Illinois, Indiana, Kentucky, Ohio, Michigan and West Virginia.

Bank Analysts See More Deals For Midwest

▸ Continued from Page 10

sin, South Dakota, North Dakota, Nebraska, Missouri, Minnesota, Kansas, Iowa, and Arkansas – the median premium since Oct. 19, 1987, was 1.43, versus 1.48 for 1985 to 1989.

Median Over 2 in Mid-Atlantic

Meanwhile, in the Middle Atlantic region, where the diversified economy has softened but is more vibrant than New England's, the median premium paid for banks has fallen to 2.16 times book value, from 2.25.

But significantly, the Middle Atlantic region is now the only one where the median price for banks remains above the level of twice book value.

In the East, Ms. Hensel said, falling prices could prompt an increase in acquisitions. Smaller banks that have held out for higher prices may realize as the economy slows that they do not have a competitive slice of the banking market and be forced to adopt a more realistic assessment of their true value.

"The wide spread that has existed between the bid and ask prices in bank takeovers is narrowing, in our view, and should create a pickup in transactions," Ms. Hensel said.

"In the Northeast, chairmen at 90% of the target banks who would have thrown you out of their offices a year ago would welcome you with open arms today," said John J. Lyons, managing principal of Lyons, Zomback & Ostrowski, a New York consulting firm.

The remaining 10%, the cream of the crop, will likely not take much lower prices, barring a sharp recession, said another analyst.

"I think they're not under pressure and will sit and wait, for a year or two if necessary, and won't mind staying independent to get their price," said Lacy M. Shockley, regional banking analyst for Smith Barney, Harris Upham & Co.

Acquisition Targets Listed

Ms. Shockley picks the stellar targets as Signet Banking Corp. and Crestar Banking Corp., both of Richmond, Va.; Dominion Bankshares Corp., Roanoke, Va.; First Virginia Banks, Falls Church, Va.; BB&T Financial Corp., Wilson, N.C.; Summit Bancorp., Summit, N.J.; Mercantile Bankshares, Baltimore; and UJB Financial Corp., Princeton, N.J.

The least pressure of all is probably felt by the prime independents in the Southeast, she said. "I would be extremely surprised to see any unfriendly deals in that area anytime soon, and that's what really puts the sellers under pressure."

The situation in the Rust Belt is quite different from in the Northeast or Southeast.

"The structure of the banking industry there lends itself to acquisitions and mergers of equals," said Ms. Hensel. "There are many midsized banks in the area with assets of $8 billion to $12 billion but only five very large likely acquirers."

They are: Banc One Corp., Columbus, Ohio; First Chicago Corp.; NDB Bancorp, Detroit; National City Corp., Cleveland; and PNC Financial Corp., Pittsburgh.

A point on which nearly all industry analysts agree is that the availability of healthy thrift institutions for acquisition by banks will not have a major impact this year on the purchase prices of commercial banks. "While cheaper up front," Ms. Hensel said, "thrifts lack the customer base and management expertise that characterize full-service commercial banks." ■

Norwest to Buy Healthy Thrift In Minnesota

By WENDY GROVER

NEW YORK — Prompted by its inability to meet new federal capital requirements, First Minnesota Savings Bank, a $3 billion Minneapolis thrift with 50 branches, has agreed to be acquired by Norwest Corp., Minneapolis.

Terms of the tentative agreement, which was announced late Tuesday, are still being worked out. But since First Minnesota is a mutually owned thrift, Norwest could acquire the thrift at a low price because there are no shareholders to be compensated. A mutual is a thrift owned by its depositors.

Norwest, a $22 billion-asset super-regional company, would increase its assets by more than $3 billion and increase its already strong presence in the Minneapolis-St. Paul market.

A Healthy Thrift

"They're paying nothing for it," said Ben Crabtree, bank analyst at Dain Bosworth Inc. in Minneapolis.

First Minnesota is considered a healthy thrift, but its capital does not meet the new federal guidelines. Analysts said the thrift has good credit quality and would likely report a profit for 1989.

Officials at Norwest and First Minnesota declined to elaborate on their joint press release.

Analysts said the acquisition would enable Norwest to strengthen its position against its archrival, the $24 billion-asset First Bank System, Minneapolis.

Mr. Crabtree estimated the acquisition would increase Norwest's consumer deposits in the Twin Cities region by about 50%, to about $6 billion.

Analysts predicted substantial cost

Gottlieb Exits As Staff Director Of Senate Panel

By ROBERT M. GARSSON

WASHINGTON — Kevin Gottlieb, the embattled staff director of the Senate Banking Committee and a longtime aide to Sen. Donald Riegle, D-Mich., announced Wednesday he will leave his Capitol Hill post on March 1 to return to the private sector. He will be succeeded by Steven B. Harris, the committee counsel.

Mr. Gottlieb has been controversial almost from the day he arrived at the banking committee a year ago. Most recently, it was disclosed that he had received $85,000 in fees from the American Bankers Association during the 17 months preceding his appointment as staff director.

Though legal, the payment raised eyebrows because it directly preceded congressional action on what turned out to be the most significant piece of financial services industry legislation since the Depression.

Payments Weren't Disclosed

More disturbing to some was Mr. Gottlieb's failure to disclose the payments, even though he was not required by Senate rules to do so.

Consumer advocate Ralph Nader said it looked "suspiciously like a deferred bribe," and congressional staffers and industry lobbyists alike said they were reevaluating the history of the thrift legislation in light of the connection.

Mr. Gottlieb said in an interview earlier this week that he did not mention it because he was not asked and he was not required to do so.

In an interview on Wednesday, he denied that he was leaving for any reason other than a desire to return to the private sector where, he said, he will "do some teaching and some consulting work." He declined to elaborate.

Bank Stocks Continue to Tumble On Dim Outlook for Earnings

By JOHN FORDE

NEW YORK — Wall Street's expectations of earnings that many major banks will report in coming weeks have turned gloomy. And the rate at which analysts are cutting profit predictions is steepening the slide in bank stock prices.

Citing continued troubles in domestic and international loan portfolios as well as sluggish noninterest income, bank analysts have cut their profit estimates for five times as many banks as they have raised in recent weeks.

In the month ended last Friday, the consensus estimate for 25 major banking companies declined, and estimates rose for only five, according to Institutional Brokers Estimate System, a division of Lynch Jones & Ryan, New York, which tracks analysts' estimates.

The IBES figures showed the consensus estimate of full-year earnings per share for 287 publicly owned banking firms fell by 5%, to $1.96, or 42.6% less than for 1988.

Investors Pessimistic

Investors, too, are becoming more pessimistic on most major bank stocks, especially money-centers. Estimates of lower-than-expected fourth-quarter

Banks Told to Write Down 20% More Of Argentine Debt; Reserves May Rise

By JAMES R. KRAUS

NEW YORK — In a move that could prompt another round of increases in loan-loss reserves, federal regulators have ordered U.S. banks to write down their medium-term and long-term loans to Argentina by another 20% because of the country's deteriorating economic condition.

It is the second writedown U.S. banks have been forced to take on their Argentine loans. In May, federal regulators forced banks to write down their loans by 20% after Argentina defaulted on its debt.

Analysts said Wednesday that they expected the chargeoffs would be taken against reserves already set aside for Third World loan losses and will not have an impact on fourth quarter or yearend earnings.

The impact of the writedown will vary from bank to bank depending on the level of its loans to Argentina and its reserves against Third World loan losses.

Manufacturers Hanover, for example, will have to chargeoff $224.6 mil-

COMMENT

The Key to Successful Acquisitions

By SANFORD ROSE

Good expense control is the single most important factor that appears to correlate with success in bank acquisitions, notes a study just published by the Bank Administration Institute and authored by FMCG Capital Strategies.

But what constitutes good expense control? Analysts have traditionally evaluated expense performance through the use of standard ratios such as noninterest expense to assets or noninterest expense to revenue.

But these ratios are not particularly illuminating since banks with different business mixes have different levels of expenses to assets or expenses to revenues. For example, banks that specialize in fee-based services have expense levels that are typically about 40% higher than those that make most of their money lending to middle-market borrowers.

To determine whether a bank is really good at cost control, its expense level must be compared to that of the average institution in its particular business peer group. Thus a fee-based bank with an expense-to-assets ratio of 425 basis points turns out to be a good cost controller. That's because the average bank in the fee-based peer group has an expense-to-assets ratio of about 450 basis points.

But a middle-market lender with a lower expense ratio – say, 350 basis points – nevertheless is a poor expense performer. That's because the median middle-market lender has expenses equal to only about 320 basis points of assets.

Preserving Equity Values

Using a model that relates expenses to business mix, FMCG Capital Strategies analyzed the stock price performance of above-average as well as below-average cost controllers that elected to acquire other banks from 1982 through 1986. It found that only those acquirers in the top quartile of expense performance managed to preserve and even enhance their post-acquisition equity valuations, compared, that is, to the valuations of banks of similar size located in the same geographic areas.

More specifically, two years after acquiring other banks, those institutions that were ranked among the top 25% in expense control had stock prices equal to 104% of their size peers. By contrast, those ranked in the second quartile had stock prices equal to only 92% of the peer level.

The stock of third-quartile expense controllers had fallen to a 22% discount relative to that of their size peers. And the poorest cost controllers – those in the bottom quartile – had sustained the largest haircut. Their stock was trading at a discount of 29%.

The data suggest that acquirers good at expense control can transfer this skill to their acquirees. An analysis of 88 in-state acquisitions where the acquired bank was not consolidated into the financials of the acquirer reveals that in 28% of the cases, acquirers rated best in expense management – the top-quartile performers – were able to improve their acquirees' cost performance by more than 50 basis points.

The acquirers in the second and third quartiles of expense control were able to improve acquirees' expense performance by more than 50 basis points in only 17% of the cases. And acquirers in the worst quartile were never able to upgrade the expense performance of acquirees by this amount.

The data also reveal the close connection between good expense control and improved returns on equity. Those acquirers in the best expense-control quartile bought banks with an average pre-acquisition ROE of 11.3%. After acquisition, the ROEs of these acquirers rose to 15.8% – a gain of 4.5 percentage points. Acquirers that were

The Lobbyists

By Barbara A. Rehm

Community Banks Trying to Head Off Added Regulation

Community bankers came to Washington this week to lobby against mounting regulation. **S. David Gohn**, president of **West Plains Bank**, West Plains, Mo., and chairman of the American Bankers Association's **Community Bankers Council**, acknowledges that bankers are unlikely to convince anyone to lift existing regulations.

S. David Gohn

But the 15-member council spread out across Capitol Hill to let lawmakers know that the cost of compliance has gotten out of hand. Mr. Gohn says the main goal was to deter lawmakers from passing any further onerous legislation.

The community bankers also met with regulators at the Comptroller of the Currency and the Federal Deposit Insurance Corp. to urge uniform examination procedures, Mr. Gohn said.

The ABA council meets every January in Washington as part of its five yearly meetings. "It allows us to get our year of strategic planning in gear," he says. Next stop is Scottsdale, Ariz., Feb. 18 to 23 for the council's national conference.

Big, Small Banks Escalate Their Wrangle in California

Possibly nowhere in America is the wrangle between large and small banks more tangled than in California.

Robb Evans, a director of the California Bankers Association, rebuts claims made in this column last week by **Craig Hudson**, western regional director of the Independent Bankers Association **of America**.

Mr. Evans, who is also president and chief executive officer of **First Indo-American Bank**, San Francisco, heads a CBA committee concerned with revamping the state's banking law. He disputes Mr. Hudson's statement that the CBA did not consult with the independent banking group before it sent its recommendations to state lawmakers.

"That is either a misquote or a lie," Mr. Evans says. "They were consulted repeatedly over a long period of time."

Mr. Hudson says it was not a misquote. "The fact remains that they never consulted us," he repeats. Mr. Hudson does acknowledge that he got all the papers produced by Mr. Evans' task force. But Mr. Hudson says: "You don't get in on the process by getting the paper after it's composed."

Mr. Evans says that any California banker could have joined the task force, but that no trade groups were invited. "We didn't want hired guns," Mr. Evans says. "I also didn't ask the **American Bankers Association** to get involved."

Mr. Evans charges that Mr. Hudson is claiming to be ignored by CBA and is hiring his own lobbyist as a stunt to attract members. Mr. Hudson says: "I think that's my job."

Homebuilders Snag Bush As Speaker at Convention

The **National Association of Homebuilders** snagged the ultimate lobbying opportunity when it convinced **President Bush** to address its national convention Jan. 19 in Atlanta.

Bill Ellingsworth, a Homebuilders spokesman, says the group's top officers met with Mr. Bush and White House Chief of Staff John Sununu recently. "Our major concern is the loans-to-one-borrower issue," Mr. Ellingsworth explains. The thrift-bailout law required thrifts to follow the same lending rules as national banks, which means thrifts that used to be able to lend up to 100% of their capital to a single borrower may now only lend up to 15% of capital to any customer.

"Our members are not accustomed to shopping around and having to get loans at 10 places," he says.

Everything You Wanted To Know About Lobbying

Thanks to **John L. Zorack**, anybody with $125 and the time to read 1,118 pages can learn the basics of lobbying.

Mr. Zorack wants to put the art of lobbying in reach of everyone. He spent seven years writing *The Lobbying Handbook*, a just-published, start-to-finish guide on how to lobby Congress and the executive branch.

The Lobbyist's Motto, according to Mr. Zorack, expands on the Boy Scout's. It is: "Be prepared, be precise, be professional, be patient, and persevere."

The handbook methodically plots how to get what you want from policymakers. It explains the complicated congressional committee structure, including the art of a conference committee; it delves into the bizarre budget-making process, including specifics on how to handle the Office of Management and Budget; and it exposes the best of grass-roots lobbying, including the right way to handle a political action committee.

Mr. Zorack became a lobbyist for the airline industry after a 20-year career with the Marines, during which he earned a variety of degrees including a law degree from Denver University. In 1983, he founded the Professional Lobbying and Consulting Center, which in addition to publishing his book serves as a clearinghouse of sorts for lobbyists. The center connects people in search of a lobbyist with lobbyists in search of clients. ■

Global View

Japan to Fight Yen Speculation

TOKYO — Bank of Japan governor Yasushi Mieno called currency movements since the New Year very speculative and said Japan and other major nations will continue to take strong concerted action against them.

Mr. Mieno told a press conference that he sees no need now for major nations to meet to reconfirm their commitment to currency stability because policy coordination among major nations remains steadfast.

The currency market has been affected since Jan. 1 by speculation concerning scandals involving politicians of the ruling Liberal Democratic Party and the political situation in the Soviet Union, Mr. Mieno said.

In a rumor-driven market, the most appropriate measure is concerted intervention, he said. Not many people in the market expect the recent trend toward a weaker yen to last long, he added.

$1 Billion Credit Plan Unveiled

QUITO, Ecuador — The government hopes to receive $1 billion in foreign credits and plans to reduce annual inflation to no more than 30% this year, Presidency Minister Washington Herrera said.

"We propose mobilizing about $1 billion in approved foreign loans," Mr. Herrera told a press conference, referring to credits from banks, lending agencies, and governments.

Ecuador plans to reduce annual inflation to between 25% and 30% by December, Mr. Herrera said, compared to 54% in 1989. The nation has foreign debt of about $11 billion, about half of which is owed to commercial banks.

Bank of Trade Changes Name

LOS ANGELES — Bank of Trade, one of the oldest Asian-owned banks in California, is changing its name Jan. 18 to Lippobank.

"We wanted the bank to become more directly affiliated with the Lippo Group, our parent company," said David T. Yeh, president. "In addition, the name 'Bank of Trade' may suggest that we primarily focus on servicing business accounts while, in fact, we offer comprehensive financial services to both commercial and consumer clients."

Bank of Trade, which reported assets of $148 million at Sept. 30, 1989, has four branches in California.

Lippo Group, a multibillion-dollar financial services network with banking operations in Hong Kong, Indonesia, New York, and California, acquired Bank of Trade five years ago.

Trustee Paid on Bond Brewing Notes

BOSTON — The First National Bank of Boston, in its capacity as trustee for holders of notes issued by Bond Brewing Holdings Ltd., announced Wednesday that it has received payment on a sight draft submitted to National Australian Bank Ltd.

The sight draft will permit payment on Bond Brewing's zero coupon notes due Jan. 22, 1991.

The submission by the Bank of Boston Corp. subsidiary was the result of an automatic acceleration of the notes when receivers were appointed Dec. 29 for Bond Brewing Holdings in Australia.

Yen Shortage Spurs T-Bill Offer

TOKYO — The Bank of Japan offered to buy about $1.4 billion worth of T-bills, or short-term government discount paper, from a limited number of banks and discount houses through repurchase agreements, a central bank official said.

The bills will be bought through a yield-competitive tender, he said; settlement will be Friday, and maturity, Feb. 14.

Due to tax payments Friday, the money market faces a yen shortage equivalent to nearly $15.2 billion.

Hanover Plans Big Growth in Spain

Bank to Ride Nation's Boom with 22 Branches After '92

By JAMES R. KRAUS

NEW YORK — Manufacturers Hanover Trust Co. plans a major expansion of its operations in Spain to take advantage of the country's booming financial markets.

James R. Brokken, executive vice president for Western Europe, said in a recent interview that the bank intends to expand its Spanish branch network to 27 from 5 and will establish a brokerage unit to underwrite and distribute securities. The bank also wants to increase its management of mutual funds and commercial paper programs.

"We've been closely tied to Spain for years and want to get closer to our customers and closer to investors," Mr. Brokken said in the interview in his New York office.

Branches Slated After '92

The new Spanish branches are not likely to open until after 1992, Mr. Brokken said, when Spain and other member countries of the European Community integrate their financial markets.

Foreign investment has flooded into Spain in recent years and has made the Spanish economy one of the fastest-growing in Europe. Banco Santander, a major Spanish bank, reported the country has the fifth-largest economy in the European Community and 7.5% average annual growth in gross national product.

However, tight liquidity in Spain is driving a rapidly rising number of borrowers to capital markets for their funding, Mr. Brokken said.

James R. Brokken
Executive VP, Manufacturers Hanover

Manufacturers Hanover is the only foreign bank among six market makers in Spanish treasury bonds, according to Mr. Brokken. He added that his bank has also been a leader in setting up commercial paper programs in Spain, where it first opened a branch in 1964.

Most Profitable Foreign Bank

Mr. Brokken said Manufacturers is the most profitable foreign bank operating in Spain, accounting for 28 percent of all profits by foreign banks at the end of last June. He did not provide specific profit figures.

As part of its strategy to expand operations in southern Europe, Manufacturers also plans to increase its branch network in Portugal, to six from two, to take advantage of economic growth and liquidity shortages in that country.

Mr. Brokken said the bank was concentrating on southern Europe because low inflation, stable interest rates, and powerful domestic competitors in countries like West Germany offer fewer opportunities. ■

Banks Writing Down More of Argentine Debt

➤ Continued from Page 1

lion, or nearly 10% of its $2.4 billion in Third World loan-loss reserves.

At the other end, First Chicago will have to charge-off only $14.6 million, or 1.7% of its $866 million in reserves.have an impact on fourth quarter or year-end earnings.

By writing down bad loans, the banks will be reducing both their reserves and the amount of bad loans outstanding on their books. This means they will have fewer reserves to cover remaining bad loans.

Total Reaches 40%

The latest writedown will bring total chargeoffs for Argentine loans to 40%, meaning that the loans can be carried on banks' books at 60 cents on the dollar. The writedown must be taken in the fourth quarter of 1989.

However, banks with low loan-loss reserves, such as Citicorp, Manufacturers Hanover Corp., and Chemical Banking Corp., may soon have to add to them, which could have an adverse effect on those banks' earnings in the first quarter of next year. But some of the impact will be mitigated because loan writedowns mandated by the government can be deducted from a bank's taxable income.

The impact of the writedown will vary from bank to bank depending on the level of its loans to Argentina and its reserves against Third World loan losses.

Manufacturers, for example, will have to charge off $224.6 million, or nearly 10% of its $2.4 billion in Third World loan-loss reserves. At the other end, First Chicago Corp. will have to charge off only $14.6 million, or 1.7% of its $866 million in reserves.

"My guess is that at some point, the banks are going to have to replenish their reserves, obviously [the writedowns] are only interim steps," said Guillermo Estebanez, assistant vice president and analyst for Latin American debt at Moody's Investors Service.

The Argentine writedown was mandated late last month by the Interagency Country Exposure Review Committee, a joint regulatory body of officials from the Federal Reserve Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corp. The agency does not make its decisions on foreign loans public, but several banks confirmed that regulators had ordered an Argentine loan writedown.

Total Debt Estimated

Argentina owed U.S. banks $6.5 billion as of the end of June, according Federal Reserve Board statistics, out of a total foreign debt of around $60 billion.

Manufacturers Hanover, Citicorp, and Chase Manhattan Corp. are the three banks most heavily exposed to Argentina. Manufacturers Hanover has $1.12 billion in medium and long term loans, Citicorp $800 million and Chase $660 million. ■

Banks Reject Warning on Retail Loans

By YVETTE D. KANTROW

NEW YORK — Most bankers remain bullish on the consumer lending business even as regulators express concern about a recent surge in delinquency rates.

In the wake of remarks last week by Comptroller of the Currency Robert L. Clarke that his agency is beginning to scrutinize consumer-loan portfolios, most lenders said it remained business as usual at their institutions.

ANALYSIS
Follow-up on the news

Citing the diversity of their portfolios, stringent credit policies, and the financial health of the American consumer, most lenders interviewed last week were perplexed by the urgency of Mr. Clarke's warning that consumer lending might succeed real estate as the next area of crisis for lenders.

"I really don't know what he's talking about," said James R. Daniel, president of Friendly Bank in Oklahoma City. Mr. Daniel said his bank's consumer loan portfolio is "cleaner than a houndstooth."

Some Are Concerned

While most bankers shared Mr. Daniel's optimism, some expressed concern about the consumer's continued penchant for borrowing. For these bankers, managing consumer-lending risk is becoming a priority.

"We have a leveraged consumer in the marketplace today," said George E. Kilguss, an executive vice president at Citizens Financial Group in Providence, R.I. "If we have a recession and unemployment escalates, we will have a serious problem."

Consumer lending is big business for commercial banks. The Federal Deposit Insurance Corp. reported that consumers owed $726 billion to banks on mortgage, credit card, and other installment loans at Sept. 30. This debt – 22.5% of the banking

Banks Buying S&Ls Faster Than Industry Perceives

By GORDON MATTHEWS

This is the first of a four-part series examining the impact of the thrift-bailout law.

NEW YORK — From the tiny Mother Lode Savings Bank in Sacramento, Calif., to the sizeable Mid-State Savings Bank in Ocala, Fla., thrift institutions across the country are being snapped up by commercial banks.

Activity has reached a higher level than has generally been perceived in industry circles, where there has been much talk of the banks' reluctance to seize opportunities to buy thrifts.

While few major deals have been struck, the number of small transactions has mounted. In fact, banks have agreed buy 55 thrifts with assets of $20 billion – about 1.6% of the industry's total – under the provisions of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, according to data compiled by BEI Golembe Inc., the Washington-based consulting concern. (The deals are listed in a table beginning on page 20.)

Pace May Pick Up

The pace of acquisitions will almost certainly accelerate this year as banks grow more familiar with thrifts, and particularly after the Office of Thrift Supervision irons out unfinished regulations to guide the purchase of thrifts that are still mutual institutions.

Asked about the level of activity since the bailout law, most banking industry observers esti-

See **SWIFT** page 21

RTC Plans To Dispose Of 50 Thrifts In 1st Period

By BARBARA A. REHM

WASHINGTON — The Resolution Trust Corp. said on Friday that it plans to liquidate or sell 50 thrifts during the first quarter. But even its own chairman, L. William Seidman, says it cannot meet its goal without additional funding from the government.

Mr. Seidman has been saying for months that the RTC does not have the cash to finance the deals. He estimates that the RTC must be allowed to borrow between $50 billion and $100 billion to get the institutons in shape and to entice investors by taking a portion onto its own books.

However, Treasury officials have told Congress that the RTC has enough money to last at least through the end of the second quarter.

The issue is expected to come to a head on Jan. 23 when a variety of administration officials, including Mr. Seidman and Treasury Secretary Nicholas F. Brady, testify before the House Banking Committee.

Money-raising options include borrowing from the Federal Home Loan Bank System, chartering a new agency to sell

FIRST NATL BANK-CHICAGO DROPS PRIME TO 10 PC FROM 10.5 PC
CITIBANK LOWERS BASE LENDING RATE TO 10 PC FROM 10.5 PC
BANK OF CALIFORNIA LOWERS PRIME TO 10 PC FROM 11 PC
2 18 PM EST
2 17 PM EST 01-08-90
CUTS PRIME RATE FROM 10.5 PC
2 45 PM EST

SPREADING THE NEWS: Banks may rush to follow the leader when the ticker reveals that one has cut its prime rate.

NEW YORK — At 8:45 a.m. on Jan. 8, the doors swung open in the 9th floor conference room at First National Bank of Chicago headquarters, and senior management told public relations to spread the news: The bank would cut its prime rate to 10% from 10½%.

The race was on.

Within hours, 30 of the nation's largest banks had jumped into what may be the greatest game of follow-the-leader in American business: changing the prime rate.

Touched off by news services, that link the financial world, such as Dow Jones and Reuters, a typical scene unfolded in banks across the nation. As the news that First Chicago had dropped the prime flashed across computer screens in bank trading rooms and executive offices, hasty meetings were called among credit committee officers, resulting in the cascade of announcements.

But this round of cuts had an extra air of suspense. Banks had held fast to a 10½% prime rate even though the Federal Reserve Board had allowed the rate on federal funds – or the rate at which banks lend to each other – to ease several times since October. While a cut in the prime could have occurred anytime since Thanksgiving, based on historical spreads over fed funds, banks were just as glad to eke out profits off the higher interest rates.

Now that First Chicago had spoiled the party, everyone waited to see which major bank would follow its lead – and start the stampede.

One factor made the proceedings especially tense: No

PEOPLE *in the news...*

Cleveland Fed Chief Waves Ax at Deposit Insurance

With deposit-insurance reform emerging as one of the hot industry topics, central bank hardliner **Lee Hoskins** is on the stump, pushing his free-market ideas on a system many consider a 57-year-old dinosaur.

Among several reforms the president of the Federal Reserve Bank of Cleveland is promoting in speeches and press interviews is the cutting of deposit insurance from $100,000 to $25,000 per account to curb the government's risk.

Lee Hoskins

That concept is industry heresy, at least to community bankers convinced any cut in insurance coverage will induce depositors to withdraw funds en masse. But there is no longer any denial that some kind of reform is absolutely critical.

Energized from a recent week of skiing at Breckenridge in Colorado, the 48-year-old economist said in an interview that he is unperturbed by critics who pan him as the Federal Reserve's equivalent of Don Quixote.

In fact, he has relished the volume of mail – which ran 5-to-1 against his recommendations – that he received following a recent speech he delivered at a meeting of the Pennsylvania's community bankers association.

"I'm trying to cast this as a broader regulatory reform issue," said Mr. Hoskins, who served as chief economist in Pittsburgh for **PNC Financial** Corp. before joining the Cleveland Fed in October 1987.

An Invitation to Recklessness

He and others point out that moving the deposit insurance ceiling to $100,000 in the early 1980s enabled untested and unscrupulous management of savings and loan associations to attract billions of dollars in deposits that were then squandered on bad loans and sometimes fraudulent deals.

Asked why he he is taking such a high profile, Mr. Hoskins, who lives with his wife in Gates Mills, Ohio, said "Our intent here is to raise the profile of reform. It's a very important issue."

Arguably, Mr. Hoskins is simply ahead of the debate curve on deposit insurance. Even the Fed hasn't taken a position on how to update the federal deposit insurance system – despite Mr. Hoskins' strong opinions and willingness to share them with his Fed peers.

Eventually, the central bank will forward some thoughts on reform of insurance to the Treasury Department, which is required by the thrift law to issue its own study of the deposit insurance system no later than early 1991.

— Robert Trigaux

First Interstate Executive Shifts From Plum to Tough Assignment

In trading the top job at **First Interstate** Bancorp's Washington State subsidiary for the same position at the bank company's troubled Arizona unit, William S. Randall is leaving one of the nation's most ebullient banking markets to take the helm of another unit in one of the most depressed.

Mr. Randall, 49, was named Thursday chairman and chief executive officer of First Interstate Bank of Arizona, marking a return to the bank where he worked from 1969 to 1981. He replaces Robert H. Duckworth, who had open heart surgery in November.

Mr. Duckworth announced last week he would take early retirement but will remain associated with the bank as a senior adviser.

During Mr. Randall's eight years as its CEO, the Washington bank established itself as one of the most profitable units in the First Interstate system.

For 1989, the $3.4 billion-asset institution will report earnings of nearly $50 million and a return on assets of 1.45%, company officials say, making it one of the best performing banks in the hot Washington state market.

By contrast, the $6.6 billion-asset Arizona bank, mired in real estate woes like most other lenders in the state, recorded a net loss of $156.1 million for the first nine months of 1989.

An Energetic Manager

Mr. Randall, who served during the 1960s on the staff of the Federal Reserve Bank of San Francisco, is described by colleagues as an energetic, hands-on manager.

In Arizona, he will have his managerial hands full immediately. Analysts note that forthcoming federal asset sales of troubled thrifts may make the state's real estate market even more unpredictable than it is now.

Mr. Randall won't have much time to settle into his new job. He will have as one of this first orders of business deciding how to dispose of First Interstate's bad real estate holdings in the midst of extremely volatile conditions.

— Sam Zuckerman

Strict Capital Rules Sink Atlantic Financial

Pennsylvania Thrift Seized When It Fails to Meet New Requirements

By JEFFREY KUTLER

NEW YORK — Atlantic Financial Federal, one of the highest-flying thrift institutions of the 1980s, succumbed last week to regulatory pressures that mounted as it became clear that it could not meet the industry's more stringent capital requirements.

The Bala Cynwyd, Pa., thrift was seized by the Office of Thrift Supervision and placed in the Resolution Trust Corp. conservatorship program. The institution reopened as Atlantic Financial Savings, with a federal thrift charter, 78 branches, $5.8 billion in assets, and regulators in the executive suite.

Atlantic, the largest of six institutions seized last Thursday, brought to 290 the number of thrifts under government control pending selloffs or other resolution of their holdings.

The new management at Atlantic Financial, led by RTC managing agent Joseph G. Hynes, quickly issued a statement to assuage depositors' concerns about Atlantic's stability.

"We will continue to maintain our regular hours," said Mr. Hynes, a 42-year-old Louisianan and former banker who has supervised several RTC conservatorships. "We're still going to be making mortgage loans, and deposits up to $100,000 will continue to be federally insured."

Subsidiaries Not Affected

Atlantic Financial subsidiary operations in West Virginia, Nevada, and California were not affected by the regulatory action, Mr. Hynes said.

At yearend 1988, Atlantic had $176 million in credit card loans to rank 16th among thrifts in that category, and $1.1 billion in total consumer loans. Depending on an assessment of credit quality, major retail banks across the country may consider buying those portfolios from the RTC.

Atlantic Financial's demise became almost certain on Dec. 6, when Donald R. Caldwell, the former chief executive officer, announced a $161.1 million loss for the fiscal year that ended Sept. 30. Mr. Caldwell admitted that the company could not meet the core, tangible, and risk-based capital standards and was likely to be taken over by regulators.

To cut back its operations and raise cash, Atlantic agreed to sell nine branches in northeastern Pennsylvania with $250 million in deposits to First Eastern Bank, Wilkes-Barre, and six branches in the Los Angeles area with $170 million in deposits to Columbia Savings and Loan Association, Beverly Hills.

The 1989 fiscal year, which ended Sept. 30, was the first in which Atlantic suffered a net loss. Of the $161.1 million of red ink, or $39.33 per primary share, $78.3 million or $18.78 per share was lost in the fourth fiscal quarter. ☐

Maryland Bill May Speed Phaseout of S&L Agency

By BILL ATKINSON

WASHINGTON — A bill that is expected to be introduced into the Maryland General Assembly this session would speed up the process of dissolving the state's 29-year-old savings and loan regulatory and chartering body.

Maryland is following the lead of a number of states that have one oversight agency to charter and regulate savings and loans and banks. Even on the federal level, legislation will be introduced to eliminate the Office of Thrift Supervision.

The bill "is definitely under discussion," said Joseph Owens, deputy secretary of the Maryland Department of Licensing and Regulation, an umbrella department that oversees all regulatory boards.

Under Maryland law, the Division of Savings and Loan Associations is to be phased out in 1992, but the state is trying to dissolve it more quickly because there are only seven state-chartered thrifts left in Maryland and three have already applied for federal charters.

In 1986, Maryland rewrote its law governing S&Ls after the state's thrift crisis in 1985, which stemmed from the collapse of a private deposit insurance system. At that time, there were 115 state-chartered S&Ls with $4 billion in assets.

A forerunner to the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, the Maryland law put strict limits on the amount of money S&Ls could lend out of state, increased examination fees, limited insider loans, and required all state-chartered S&Ls to get federal charters or merge with an institution that already had one.

Correction

Due to an editing error, J.P. Morgan & Co.'s per-share earnings in the fourth quarter were reported incorrectly in a Jan. 12 story ("J.P. Morgan's Earnings Drop Below Analysts' Expectations," page 1). Morgan earned 81 cents a share. ☐

EDITOR'S NOTE

The 'New' American Banker

Dear Reader,

You have seen a number of new features in the *American Banker* in recent months, including additional columns and greater use of graphics and photography. Today, we are completing the introduction of a total redesign of our 154-year-old newspaper.

All of this stems from a thorough look at the needs of our readers and the changing dimensions of the banking industry. It began about a year ago with a Booz, Allen & Hamilton survey that included interviews with more than 1,000 past and present subscribers and continued throughout 1989 in meetings with banking industry experts.

Driving the process was our own journalistic sense of getting off the mark faster to deliver banking news first and with the most insightful analysis.

A further aim of the redesigned paper is to help readers find what they want to read with greater ease. In short, we want to give them a faster way to get through the paper and to make it more enjoyable in the process.

The result is more than a dozen new columns and daily departments for consumer, international, technology, and financial news.

Under the guidance of newspaper designer Robert Lockwood, the *American Banker* also has a new look. Reflecting the faster pace of the industry itself, the paper has shifted from a four-column to a five-column format.

And to give greater attention to news analysis and feature stories, the advertisement space that has been allocated at the bottom of page 1 for more than a century has been eliminated in favor of giving readers more editorial material.

Among the added sections, Finance, which begins on the back page, is especially new. For the first time, the *American Banker* is carrying closing prices of bank and thrift stocks, including a recalculation daily of the market price-to-book ratio.

The Finance section also contains a daily bank stocks column and a daily capital column that tracks how banks are funding their assets and raising long-term capital. The Deals column is a shortened moniker for "Inside Financing," the column begun a few months ago to track corporate lending.

> **All these changes are in keeping with the dynamic role that the banking community is playing.**

The segmentation of the paper into departments, an expanded Inside News column on page one, a company index on page two, the use of much more art, and the introduction of several human interest columns are ways we have devised to meet the goal of becoming, in the terminology of product designers, more user friendly.

All these changes are, we believe, in keeping with the dynamic role that the banking community is playing in the consumer, corporate, and political worlds. They also reflect the changing parameters of the banking business itself as banking becomes more of a generic name for any financial institution that borrows, lends, and serves as a money intermediary.

Throughout this period of changing the *American Banker* over recent months, we attempted to adhere to the mission statement we wrote early in the process. Among the standards we set out then were "to deliver in-depth banking news and analysis to America's bankers – to alert and inform them, every day, about the most significant events affecting their business."

Help in Decision-Making

Further, we said: "Our goal is to help our readers make the decisions that will enable their organizations to survive and prosper in the fast-changing competitive environment of today's global financial services industry."

The shelf life of any edition of a daily newspaper is, by design, short. But if, day after day, it informs, delights, and challenges the minds of its readers, it delivers value from one generation to the next. That, we hope, will be the lasting measure of this redesign.

Fred Bleakley, Editor

CRIME BLOTTER/*By Tom Leander*

Transfer Fraud Artist Nabbed in Hong Kong

A bank trainee earning $10,000 a year swindled Britain's Barclays Bank PLC out of nearly $2.5 million by exploiting loopholes in the bank's automated cash-transfer systems.

The bank did not spot the scam for a year, by which time Stephen Hedges, 23, had departed to fly first-class around the world.

Mr. Hedges, an economics student, joined Barclays in the City of London in 1986. He was given the job of moving funds for major corporations and institutional investors, a London court learned.

In his ploy to cheat the bank, the clerk created a company called Pharmogen and opened an account for it at the rival National Westminster Bank PLC.

He then filled out loan requests for various legitimate companies and got them authorized by his superiors. He next altered the paperwork so that the funds went to Pharmogen through the bank's automated systems.

Mr. Hedges repeated his swindle five times. The biggest hit, in August 1987, amounted to $1 million. Two days later he resigned, telling colleagues he wanted to travel the world.

Barclays' audits finally exposed the fraud, and Mr. Hedges was arrested in Hong Kong, where detectives found two bags containing $1.5 million worth of $100 bills.

London's crown court sentenced Mr. Hedges to three years in prison. Because he has already spent six months in custody, he could be released on parole next year.

— **John Evans**

FBI Blames Drug Ring For Bank-Heist Wave

A heroin and cocaine ring was partly to blame for the record number of bank robberies in California's Ventura County in 1989, according to the county's top FBI agent.

FBI agent Gary Auer said at least four drug addicts were responsible for more than 20 of the 76 bank robberies in the county last year. He said the addicts were ordered to carry out the robberies by the head of a local drug ring as a way to support their habits.

According to Mr. Auer, the four suspects said they were getting their instructions from the same dealer, whose identity they would not reveal.

Mr. Auer expressed hope that the unidentified ringleader may have been apprehended in the first week of January, during a sweep of local drug dealers, but he said this has not been determined.

* * *

Wigged Bank Bomber Charged in Baltimore

A man dressed in a wig and a woman's coat robbed a Baltimore branch of MNC Financial Inc.'s Maryland National Bank, then exploded a bomb in the bank as he fled, according to Baltimore police.

Lloyd Dickerson, 36, of Baltimore, appeared before U.S. Magistrate Daniel Klein Jr. He was indicted Jan. 4 on federal bank robbery charges.

Police have also confirmed that the suspect recently completed a prison term for slaying his grandmother.

The indictment accuses Mr. Dickerson of wearing a wig and woman's coat when he gave a teller a holdup note written on a matchbook.

He also allegedly lobbed a homemade bomb behind him as he left. The bomb shattered a front window and damaged cars, but no one was injured.

* * *

S&L Directors to Pay For Spending Spree

Federal regulators will seek stiff prison terms for two former savings and loan directors who squandered $500,000 when they were supposed to be making restitution of $1.5 million on an earlier bank-fraud conviction.

Officials of the Federal Deposit Insurance Corp. said they would ask a federal judge to impose "significant prison sentences" on Jan. 22 for brothers Leif and Jay Soderling, former directors of Golden Pacific Savings and Loan Association in Santa Rosa, Calif.

Jack Smith, deputy general counsel for the FDIC, said the judge needs to send "a strong message to anyone contemplating fraud that we will not tolerate this kind of criminal conduct and contempt."

The Soderlings were convicted in December of going on a $500,000 spending spree at the same time they claimed they could not pay $1.5 million they owed in restitution to the FDIC as the result of a previous bank fraud conviction.

The brothers were directors and shareholders of Golden Pacific when it was closed by federal regulators in May 1985. The two served eight months in halfway houses.

* * *

Bogus Bomb Forces Evacuation of Bank

A fake bomb left on a desk by a would-be robber forced the evacuation of about 20 people from a Security Pacific National Bank branch in Hollywood, Calif. on Jan. 5, according to police.

Dressed casually in a sport coat and polo shirt, a man entered Security Pacific Corp.'s branch of on Sunset Boulevard at about 2 p.m. and asked for a $35,000 loan. After discussing the loan for about a half hour with a bank employee, the man pulled out a red box and threatened to blow up the bank unless he got the money, police said.

The man fled when the employee went to the bank vault. No money was taken and employees were allowed to return in about an hour. Police found crumpled newspapers in the box.

* * *

Michigan Bank Robber To Be Tried for Murder

A man charged with kidnapping four bank employees and killing one of them when he ran over her with his car must stand trial for murder, a judge ruled this week.

William McAlister, 21, allegedly robbed the First Federal Bank of Michigan to get money to pay his college tuition.

Mr. McAlister is accused of robbing a First Federal branch on Sept. 26 and kidnapping four bank employees. The employees were taken to a rural site, where they were forced to lie on the ground. One of the workers, Marilyn Parks, was killed when Mr. McAlister allegedly drove over her with his car.

Mr. McAlister was picked up later that day and the $46,000 taken in the robbery was recovered. Police say that Mr. McAlister has already confessed to the bank robbery.

According to police, he planned to use the money to pay his tuition at Andrews University, a Seventh-Day Adventist school in Berrien Springs, Mich., where Mr. McAlister was to begin his sophomore year. ☐

Swift Pace of Bank Deals for Thrifts Surprises the Industry

Continued from *page* **1**

mate that it involved far fewer deals. "My guess would have been about 30 deals," acknowledged William B. McWilliams, president and chief executive officer of First Atlantic Securities Inc., Raleigh, N.C.

Moreover, the number of small transactions has led to the mistaken notion in some quarters that most transactions have involved troubled savings and loan associations being handled through the Resolution Trust Corp. Actually, nearly half the 1989 deals – 25 of them – involved banks buying thrifts without direct government involvement.

Many Deals Unassisted

"This should finally put to rest the idea that banks are not interested in thrifts," said Bruce W. Harting, thrift industry analyst at Salomon Brothers, the New York investment banking firm.

"What's most impressive is the number of unassisted deals," he added. "It demonstrates that banks have begun their own search for thrifts rather than waiting for a package from the government."

"It's a surprising amount of activity, given that the bailout bill wasn't enacted until mid-August, the regulations took several further months, and that the long debate over capital rules went on until December," said Allan G. Bortel, the senior thrift analyst for Shearson Lehman Hutton Inc.

Besides the thrifts purchased under the thrift law's provisions last year, there was also the acquisition of the $6.6 billion-asset Pacific First Financial Corp., Tacoma, Wash., by Royal Trustco Ltd., Toronto. The $212 million transaction was announced last February and completed in December.

Contact Was Limited

The difficulty of gauging banks' reactions to buying thrifts when the chance finally arrived stemmed partly from the small amount of contact that previously went on between the two kind of institutions.

"Bankers always looked down their noses at thrifts, and that was before the crisis of the last few years. They've been on an accelerated learning curve since August," noted Samuel J. Beebe, a banking and thrift industry analyst at Williams Securities Group, Tampa, Fla.

The first bank acquisition of a thrift only dates to 1982 and, given both regulatory difficulties and bankers' attitudes, few occurred between then and 1987, when a two-year moratorium was clamped on such deals. In effect, banks have only five years of history and a handful of examples for guidance.

"That's really pretty brief experience," said John J. Mingo, the BEI Golembe managing director who closely tracks bank purchases of thrifts. As more is gained, he feels the number of these deals will grow rapidly.

He also believes that the considerable gap that has existed between typical prices paid for thrifts and banks will begin to narrow.

Price Gap Is Wide

Since the October 1987 stock market crash, the median price paid for banks with more than $500 million in assets has been 1.8 times book value, or 15 times earnings, or a 6% premium over deposits. In contrast, for similar healthy thrifts it has been a meager 1.2 times book, 12.5 times earnings, and a 2% premium to deposits.

"Thrifts are cheaper now precisely because they are a little-known entity as far as banks are concerned," he said. The removal of regulatory barriers to such acquisitions effectively removes a market imperfection that had been a big source of the pricing gap, Mr. Mingo believes.

"With increasing demand, I think we'll see the prices of thrifts and banks closer together by the end of this year."

Price Factors Disputed

Mr. Mingo disagrees with those who assign the lower prices paid for thrifts to the higher risks involved for banks, and particularly to the perceived lack of management talent at many thrifts. "Management is something you pay for if you need it, and don't if you don't," he said.

Most Active States In Bank-Thrift Deals

Agreements under bailout law

State	Thrift assets acquired (billions of dollars)	# of deals
Pennsylvania	$6.7	8
Texas	$3.0	8
Ohio	$2.9	6
Florida	$2.3	4
N. Carolina	$1.2	7

Source: BEI Golembe Inc.

"There are regulatory difficulties and extra due diligence required in buying savings and loans, and some operating differences involved in running them, but nothing that is not priceable or manageable," he maintains.

Nearly all the thrift deals struck in 1989 were used by banks as a means of filling in gaps in their franchises, rather than as extensions of their markets.

Geographic Concentration

The focus on small institutions last year meant that the largest number of deals and the most thrift assets acquired by banks took place in states such as Pennsylvania, Texas, and Ohio that have a large number of small institutions.

Of the 25 deals not involving government assistance, most if not all are still pending. Most banks have not yet decided if their thrifts will continue to be operated as thrifts or, where permitted, be merged into bank operations.

While 41 of the bank-thrift deals arranged last year involved shareholder-owned thrifts, the majority were small and did not rank among the roughly 425 stock thrifts whose shares are traded on a routine basis. Deals for stock thrifts prevailed in the absence of rules for buying mutuals, but those are expected in the next 90 days.

A Typical Deal

Typical of them is the planned purchase of $107 million-asset Mother Lode Savings by U.S. Bancorp., Portland, Ore. The $5.3 million price tag is equal to 1.2 times Mother Lode's book value and 11 times its earnings, with a 0.9% premium on deposits.

For far less than it would pay for a bank, the $16 billion-asset Oregon superregional is obtaining a state-chartered thrift with three office in what it called "one of the fastest growing urban areas in the country." The new offices will enhance the

CAPITAL

Increase Seen in Subordinated Debt Issues

By KELLEY HOLLAND

Look for increased issuance of subordinated debt by smaller banks in the first half of 1990, analysts and capital markets specialists say.

Provided the market for bank bonds strengthens, these banks will be seeking to bolster Tier 2 capital, the portion of required capital under the new rules that can be funded with subordinated debt, among other things.

"There is a very definite need for Tier 2 capital versus Tier 1," observed William King, first vice president at Merrill Lynch. "You're going to see a lot of smaller bank holding companies that have never been to the public debt markets before."

Historically, large banks have been the big issuers of subordinated debt because their more liquid issues were more attractive to investors. Most regional banks have resorted to other means of financing, and "most of these banks under the old rules seemed well capitalized," Mr. King said. "But the new capital rules changed this." As a result, smaller banks may soon enter the debt market, he added.

Some already have. In October 1989, Merchants National Corp. made its debut in the public debt markets with a $65 million issue of subordinated debt. A spokesman for the bank said Merchants National had Tier 1 capital of 8.66% as of Sept. 30. However, the bank wanted to borrow following several acquisitions, and "we felt that as long as we needed to go out and get debt we might as well get the sub debt first because that counts for Tier 2." Before the debt issue, Merchants National had no Tier 2 capital at all, he added.

A weak bank bond market is leading banks to defer debt issuance, however. In December, MNC Financial Inc. postponed a subordinated debt offering when the market softened, according to Arthur Gilbert, assistant treasurer.

* * *

Traders expect earnings news over the next couple of weeks to remove some uncertainty from the market for bank bonds. But one observed that "it's a shooting gallery" for bank bonds, as news of real estate or other woes continues to batter selected credits. After Bank of New England's troubles surfaced last month, for instance, an outstanding issue of its subordinated capital notes, due in 1999, plummeted to the point where its spread over Treasuries was more than 900 basis points.

Fed funds traded down slightly Friday in advance of a long weekend. Traders said they expected the market to hold around 8¼% or come down slightly over the next few weeks. Of the general policy of the Federal Reserve Bank, one trader said, "I think they'll be biased more toward the soft retail sales than the stronger than expected producer price index number." ☐

that deal, especially if the economy continues to soften. Merrill Lynch did not return telephone calls.

The price that the Philips board might demand is unknown. Initially, Philips shares were to be purchased at $25.50. Under the most recent terms, the price was cut to $24 a share.

"HLT [highly leveraged transaction] funds are now a scarce resource," said one banker. "Before we commit to a deal, we have to make sure it's a deal we want and one that will make money.

"For money-center banks, that means they probably won't do deals unless they can be named agent or coagent where they stand to make the most money."

Lancer Industries Seeks To Refinance Bridge Loan

In a climate of increasing skepticism from bankers toward credits in cyclical businesses, Lancer IndustriesInc. is making its case to potential lenders for refinancing on a $130 million bridge loan that it used to purchase Fairfield Manufacturing Co. last August.

Lancer, a New York-based industrial holding company, says it is covering all the bases by talking to variety of funding sources besides commercial banks. Lancer purchased Indiana-based Fairfield Manufacturing from Neoax Inc.

"We're talking to different types of lenders: one-stop shops, senior lenders and subordinated lenders, and we're keeping an eye on the public market," said Angus Littlejohn, president and chief financial officer of Lancer.

Merrill Lynch, Pierce, Fenner & Smith, Inc., a subsidiary of Merrill Lynch & Co., is presently advising the company on the refinancing. Merrill provided the bridge financing.

Although several deals has met with banker resistance recently because of their cyclical nature, Lancer officials said they are not too concerned.

"It [Fairfield] has some cyclical businesses, but they're in so many different industries," Mr. Littlejohn said. "It has mining equipment on the down cycle and agricultural equipment for the up cycle, so they offset each other."

Lancer officials have not yet decided on the structure of the refinancing. A memorandum recently sent to about 10 potential funding sources, however, reportedly states that Lancer is looking for approximately $95 million in senior financing and $35 million in subordinated debt.

Some lenders have already responded with proposals, Mr. Littlejohn said. He would not elaborate except to say that the equity component in the structure would be north of $20 million.

Georgia Gulf Set to Name Chase as Leader on Recap

Chase Manhattan Bank was expected to be approved as lead banker for the recapitalization of Georgia Gulf Corp. at the company's special board meeting today, according to reliable bank sources.

Security Pacific National Bank and Canadian Imperial Bank of Commerce will be named coagents, they said.

Georgia Gulf said Friday that it was meeting to consider a definitive proposal for financing the recapitalization. Details on the structure of the financing were not immediately available.

Banking sources had speculated earlier that the recapitalization could be up to $900 million, with about two-thirds consisting of senior bank debt. In recent weeks, as the company remained silent about its plans, stock speculators have lowered their expectations for a large payout.

The board of the Atlanta-based company chose Goldman, Sachs & Co. to help structure a leveraged recap after the company received an uninvited $50-a-share takeover bid from Harold Simmons' NL Industries.

Approximately eight banks were invited by Goldman to bid for the agent position, sources said.

Swift Pace of Bank Purchases Of S&Ls Surprises the Industry

Continued from *page* 21

franchise of its existing subsidiary, U.S. Bank of California.

"Over the next few years, I think we will see the banks steadily nibble away at the bottom 1,500 thrifts in the country, either using the government's assistance or paying small premiums," said Mr. Harting.

Some Requirements

"But banks buying into the top 100 or 200 thrifts that can really make a difference in market share," he said, "will depend on the healthiness of real estate markets, the pricing and valuations of bank stocks and, not least, more comfort by banks with thrifts as time passes and the education process goes on."

Only a few fully priced deals between banks and sizeable healthy thrifts with major shares in their markets were struck last year.

Among them, Bancorp Hawaii, Honolulu, agreed to buy FirstFed America, Honolulu, which has assets of $875 million, paying a price equivalent to 1.5 times book, 15 times earnings, and a hefty 6.34% premium to deposits.

In Michigan, First of America Bank Corp., Kalamazoo, agreed to buy the 402 million-asset Primebank Federal Savings Bank, Grand Rapids, for a price of 1.63 times book, 12.5 times earnings, and a 3.9% premium to deposits.

And in Florida, First Florida Banks, Tampa, agreed to buy the $1 billion-asset Mid-State Federal Savings Bank, Ocala, Fla.

California Court Sides with Banks In Liability Cases

By SAM ZUCKERMAN

SAN FRANCISCO — After years of silence on the explosive issue of lender liability, during which lower courts awarded tens of millions of dollars to borrowers, California's Supreme Court has weighed in on the side of the banks.

The California high court's attitude was revealed in decisions last month not to review a pro-bank appeals court ruling while disallowing a pro-borrower verdict's use as precedent. The actions, which followed a string of lender appeals court victories in the state, add new strength to banks' defenses against aggrieved borrowers.

ANALYSIS
Follow-up on the news

Because the court refused to hear either lender liability case, its moves are seen more as signals than definitive pronouncements.

But in the last decade California has seen the most litigation over a lender's responsibilities to a borrower. Because decisions here tend to be cited as precedents across the country, the development could have national significance.

Supreme Deterrent

"You are not going to see people as willing to drag us in on these multimillion dollar lawsuits," said David Grappo, a Wells Fargo Bank staff attorney.

The Supreme Court acted in two contradictory cases, one of which had been won by the lender, the other by the borrower. In Price v. Wells Fargo Bank, a San Francisco state appeals court dismissed a suit by ranchers who claimed the bank backed down on promises to extend loans past official maturity dates.

In Security Pacific National Bank v. Williams, a San Diego appeals court upheld a $7 million award in favor of an auto dealer who contended his business failed because of the bank's faulty advice.

Preserving Lender Precedent

The Supreme Court refusal to hear either case let the lower court decisions stand.

But the high court ordered what is technically known as a decertification of the Williams decision, meaning that lawyers cannot cite the case as precedent in any future litigation. By not issuing a decertification on the Price decision, the net result was to preserve the pro-lender precedent while wiping the pro-borrower decision off the books.

Observers say decertification allows the Court to send a signal on its position on a case without

FDIC Plans Lid On Using Service Pacts As Capital

By BARBARA A. REHM

WASHINGTON — The Federal Deposit Insurance Corp. plans to limit sharply the use of purchased mortgage servicing rights to meet minimum capital requirements, and that would force at least 56 thrifts to seek new capital, analysts said.

The FDIC Tuesday postponed putting out the rule for public comment but is expected to do so in two weeks.

The change, phased in over five years, would permit thrifts to count purchased mortgage servicing rights for only half of their 1.5% tangible capital requirement. Some state-chartered banks would be similarly affected.

Tangible Capital Rule

Thrifts now can meet all of their tangible capital requirement with purchased mortgage servicing rights.

Under these servicing contracts, the owners of mortgages pay institutions a fee for collecting payments and other services. The contracts can be assigned values and counted as capital.

The treatment of mortgage servicing rights was controversial last year when Congress debated the thrift bailout law. It left up to the FDIC the setting of a cap on the amount that could be applied to tangible capital requirements.

Regulators consider mortgage servicing rights a relatively less

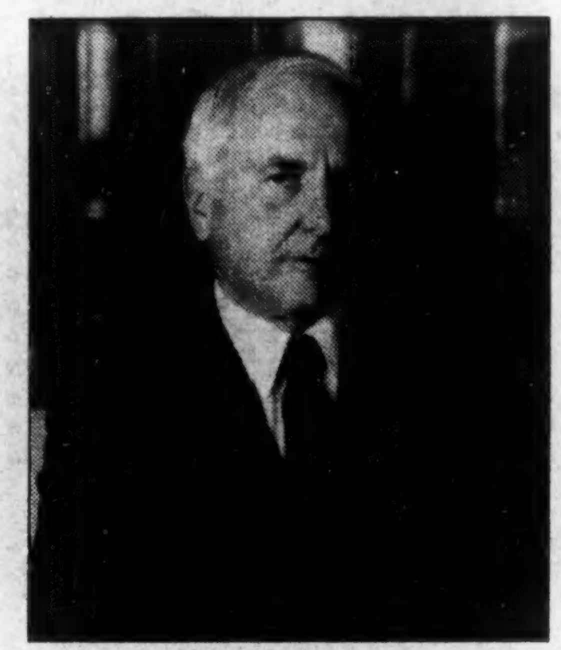
Pinola Is Latest to Yield As New Leaders Emerge

By SAM ZUCKERMAN



Joseph J. Pinola

SAN FRANCISCO — A new era of banking leaders continued to unfold Wednesday as First Interstate Bancorp announced that Joseph J. Pinola, who transformed the bank into the nation's first true superregional, will retire on June 1 as chairman and chief executive officer.

He will be succeeded by Edward M. Carson, 60, who has spent his entire 39-year career at First Interstate.

The announcement of Mr. Pinola's impending retirement, which was expected, came one day after Richard J. Flamson resigned as CEO at Security Pacific Corp. And it marks a continuation of the pell-mell change of leadership at many of the country's biggest banks in recent months.

Changing Face of Banking

Among the bank executives who recently stepped down or plan to soon are Lewis Preston, former chairman and CEO of J.P. Morgan & Co., and Robert Ferguson, chairman and CEO of First Fidelity Bancorp.

John F. McGillicuddy of Manufacturers Hanover Corp. and Willard C. Butcher of Chase Manhattan Corp. have announced plans to retire in the next few years.

Bank observers predicted Wednesday that more executive changes will continue to occur.

"What we are seeing is the passing of the torch," said James J. McDermott Jr., head of research at Keefe, Bruyette & Woods Inc., a New York securities firm. "Some banks need fresh views, and these younger guys get a chance to manage through this difficult period."

At First Interstate, Mr. Carson is seen as a transitional figure who will probably retire himself in a few years.

A possible successor is William E.B. Siart, the fast-rising 43-year-old president and CEO of First Interstate Bank of California, the corporation's flagship subsidiary, who will become president of the $58 billion-asset holding company when Mr. Carson becomes chairman.

He was also named a company director, and will continue as chief of the California bank.

Another possible successor is First Interstate Bank of Washington chief executive William S. Randall, 49, who last week was named to head the Arizona subsidiary, which is experiencing serious financial problems because of the decline in the real estate market.

Siart Versus Randall?

"They are pitting Siart against Randall," said a New York bank analyst who asked not to be identified.

Thrift Villains: Easy to Spot, Hard to Nail

By STEVE KLINKERMAN

DALLAS — When federal prosecutors won an indictment against Danny L. Faulkner after a five-year investigation, it appeared they had solid evidence that he and six other defendants had looted $136 million from the failed Empire Savings Association, Mesquite, Tex.

But after listening to seven months of testimony, a jury in Lubbock deadlocked, unable to render even one of the more than 300 verdicts possible in the 88-count indictment.

The defeat, in what was the largest bank fraud case ever brought to trial, came just one month after the enactment of the thrift-bailout law last August. And experts say it is but a glimpse of the frustration that is to come as federal agents go after thrift executives charged with

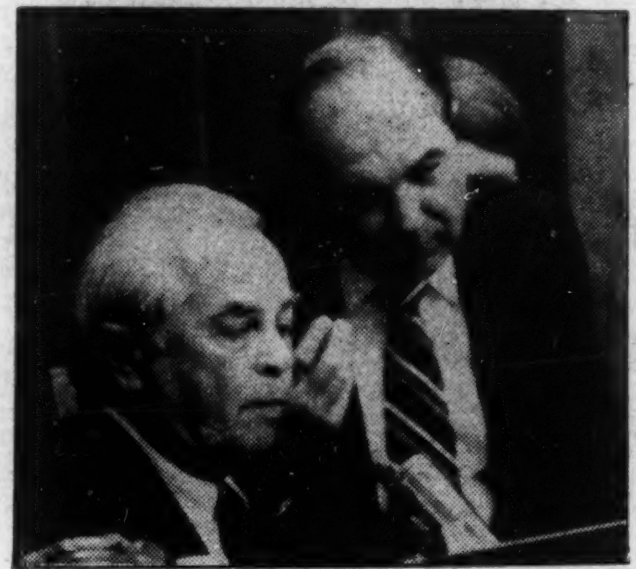
PEOPLE *in the news...*

Paul Nelson Comes Back To the House as Economist

Former House Banking Committee staff director Paul Nelson is returning to Capitol Hill, where he was once one of the biggest backstage players of them all.

Mr. Nelson will be chief economist of the House Small Business Committee and special adviser to a task force studying the competitiveness of U.S. financial institutions.



FORMER TEAM: Paul Nelson seen in his days as an aide to former Rep. Fernand J. St Germain, D-R.I.

He was House Banking Committee staff director from 1963 until 1987, when he went to Tulane University, New Orleans, as an administrator. The 60-year-old Mr. Nelson served under three banking committee chairman, from Wright Patman, D-Tex., to Fernand J. St Germain, D-R.I. Mr. Nelson is regarded by many as a master of the legislative process, as well as an expert on banking law and regulation.

Because of his background and stature on the Hill, and because Small Business is chaired by Rep. John J. LaFalce, a senior member of the House Banking Committee, it is expected that Mr. Nelson will have an opportunity to have an impact on a broad range of financial institutions issues, including the debate over industry restructuring. Mr. LaFalce, a New York Democrat, also chairs the Banking Committee task force on U.S. competitiveness.

He told associates in late 1987 that the latter legislation was the most difficult bill of his career, and that he was reluctant to go through the process again.

But Mr. Nelson quickly tired of academic life at Tulane, where he was executive vice president, and he began looking for a Washington job. Among other things, he aggressively sought an appointment to a seat on the Federal Deposit Insurance Corp. Mr. Nelson did not return calls this week or last.

Mr. LaFalce also plans to name Jeanne Roslanowick, his banking aide, as staff director for the task force.

MIDDLE ATLANTIC

Dewe Rogerson Inc., New York, the financial and corporate communications firm, has formed a mergers and acquisitions advisory and proxy solicitation services division. The new service will be launched by three new executives.

They are **Daniel H. Burch,** executive vice president, previously a senior vice president at D.F. King & Co., New York; **Neil J. Call,** executive vice president, formerly an executive vice president at D.F. King; and **Mark H. Harnett,** senior vice president, previously a vice president at D.F. King.

Dewe Rogerson Inc. is part of the Dewe Rogerson Group, based in London.

Washington Bancorp, Hoboken, N.J., has elected **Theodore J. Doll** as president and chief operating officer of the holding company and its subsidiary, Washington Savings Bank.

He has served as executive vice president of the bank since last October.

Binghamton Savings **Bank,** Binghamton, N.Y., has named **John J. Consey** and **Alex S. DePersis** to executive vice presidents, a new administrative title at the bank.

Mr. Consey supervises banking operations and Mr. DePersis supervises lending operations.

Westinghouse Credit Corp., Pittsburgh, has named **James E. Focareta** as president of this unit of Westinghouse Financial Services Inc. He formerly was senior vice president in charge of credit policy and planning. Mr. Focareta succeeds **William A. Powe,** who becomes chairman.

Three senior managers were named executive vice presidents of Westinghouse Financial Services. **Robert T. Barbour,** who headed Westinghouse Credit's corporate capital group, now heads the new international operations. **Laurence A. Chapman,** chief financial officer of both Westinghouse Financial Services and Westinghouse Credit, is now also responsible for asset review. **James W. Meighen,** formerly head of Westinghouse Credit's real estate finance group, moves to head a new capital markets operations, with responsibility for structured finance and syndications.

SOUTHWEST

First City, Texas-Houston elected **Robert G. Brooks, James M. Kipp** and **William B. Wiener 3d** as executive vice presidents.

Mr. Brooks is manager of First City real estate division; Mr. Kipp is manager of the bank's energy division; and Mr. Wiener is the senior credit officer for corporate banking.

— **Franklin Smith**

Neil Bush Faces Ban from Banking Industry

By ROBERT TRIGAUX

Neil Bush

WASHINGTON — Neil Bush, the President's 35-year-old son, is close to signing a consent order with thrift regulators that in all likelihood will ban him from banking.

A spokesman at the Office of Thrift Supervision said an agreement could be reached with Mr. Bush as early as today.

Mr. Bush's problems with the thrift regulators stem from his directorship at Denver's now-defunct Silverado Banking, Savings and Loan Association from 1985 until September 1988. The S&L, which was the third-largest in Colorado at the time, failed in December 1988.

Similar agreements have been signed with three other directors, including the institution's former chairman, Michael R. Wise. Mr. Wise was considered a rising star in the thrift industry and was an executive committee member of the U.S. League of Savings Institutions from 1986 until his thrift failed.

No Admission of Wrongdoing

The agreements, which required the former directors to obtain regulatory approval before working for a bank again, are not an admission of any wrongdoing. Lawyers claim it is a way to avoid expensive administrative hearings that, by their very nature, are weighted in favor of the agency.

According to published reports, regulators have been looking at two loans made by the thrift to business associates of Mr. Bush, including one to a prominent Republican fundraiser.

In addition, the Federal Bureau of Investigation and several government agencies, including the Securities and Exchange Commission and the Federal Deposit Insurance Corp., have been investigating allegations that the thrift was part of a "daisy chain." The chain involved as many as six other institutions that passed problem loans from one to another to hide them from examiners and also moved junk bonds for Drexel Burnham Lambert Inc. when Michael Milken worked for that firm.

The OTS action is the strongest step that agency can take against officers and directors of failed thrifts. It is up to the FDIC to collect civil penalties from the directors to cover losses to the deposit insurance funds. An FDIC spokesman said his agency is reviewing the case.

Fighting the Feds

William Leone, the Denver lawyer who represents Mr. Bush, had no comment.

But lawyers for Mr. Wise and the other two directors who have signed similar agreements claimed their clients gave in because they did not have the money to "fight the feds."

"It's very difficult to win," said Bettina Lawton of Dechart, Price & Rhodes, who represented Mr. Wise. "There's very limited discovery for a defendant in an administrative hearing."

Former directors Richard K. Vandapool and Robert M. Lewis, both former vice chairmen and officers, signed agreements last week. □

Junk Bonds Cited in CenTrust's $119.5 Million Loss

By KENNETH CLINE

ATLANTA — CenTrust Bank, Miami, on Tuesday reported a net loss of $119.5 million for the fiscal year ended Sept. 30. The bank blamed its problems primarily on "changes in law and regulatory directives," specifically a requirement that it divest itself of high-yield securities at market value.

"These losses, in our opinion, do not reflect the actual performance or value of the bank," said chairman David L. Paul in a prepared statement.

Black Ink in 1988

CenTrust's 1989 loss compares with earnings of $50.1 million in fiscal 1988. In the fourth quarter, CenTrust lost $97.3 million, versus red ink of $2.7 million during the same period of 1988.

Since early last year, Mr. Paul has been feuding with state and federal regulators over control of $9 billion-asset CenTrust, the largest thrift in the Southeast. In early December, the Office of Thrift Supervision issued a cease-and-desist order against the bank, requiring it to take various steps to return to safe and sound banking practices.

A few weeks later, Florida regulators issued an administrative complaint to CenTrust ordering Mr. Paul to step down as chairman and chief executive.

In the conflict's latest episode, the U.S. Court of Appeals in Washington on Jan. 12 upheld a temporary order by the OTS requiring CenTrust to carry defaulted securities in its portfolio at their current market value. In his press release discussing CenTrust's fiscal 1989 earnings, Mr. Paul said the order forced the bank to recognize $26 million in losses above what it considers to be the securities' value if sold.

Mr. Paul also criticized other regulatory directives related to last year's thrift-bailout bill that required CenTrust to divest itself of high-yield securities, or junk bonds, and reserve for losses arising from those sales.

"No one really expected them to write off that much of their junk bonds," said Paul Bauer, president of Coral Gables-based Bauer Financial Reports, a thrift research company. □

Citicorp	Paul Glaser	450,000
BankAmerica	Michael Simmons	400,000
Chase Manhattan	Elaine Bond	350,000

*Middle of estimated salary range

Source: Computerworld

NEW YORK — An elite handful of bank technology executives are raking in annual compensation packages of almost half a million dollars, giving them parity with many chief operating officers and financial officers, according to a report in a computer trade journal.

The bank technology executives are among the highest-paid computer managers in all of U.S. business, the survey by *Computerworld* showed. Only technology chiefs at Wall Street investment banks earn more than their counterparts at such banking companies as Security Pacific Corp. and Citicorp.

The salaries of the bank-technology elite are well above the $185,000 that an average top computer manager earns annually at a commercial bank. That average was reported in a survey of U.S. companies last fall by the Chicago-based executive recruiting firm Heidrick & Struggles Inc.

Coast Bank Has Top Earner

John Singleton, vice chairman of Security Pacific, leads the pack of top earners in the banking industry with a compensation package worth $450,000 to $550,000, according to *Computerworld*. Mr. Singleton, who is widely admired outside Security Pacific for helping to enhance the prestige of bank operations managers, was given the added title of chief operating officer this week.

The highest-paid information systems executive in the United States is DuWayne Peterson, chief information officer of Merrill Lynch & Co., with 1988 compensation of $1 million. Before joining Merrill Lynch, Mr. Peterson founded Security Pacific Automation Co. and was succeeded by Mr. Singleton, who is still chairman of that Security Pacific Corp. subsidiary.

Computerworld obtained the data for Mr. Singleton and Mr. Peterson from proxy statements. The remaining income figures resulted from research.

Wall Street's Elite

Other highly paid technologists on Wall Street work for Salomon Brothers Inc., Morgan Stanley Group Inc. and Drexel Burnham Lambert Inc. The report said these executives made between $700,000 and $800,000 last year.

The second best-paid bank technology executive was Paul Glaser, chairman of the Citicorp Technology Office Inc., which coordinates technology efforts throughout the New York-based holding company. *Computerworld* estimated his earnings at $400,000 to $500,000.

Michael Simmons, executive vice president of systems engineering and data processing at BankAmerica Corp., San Francisco, is the third highest-paid banking technology chief, with 1988 compensation estimated at $350,000 to $450,000.

Mr. Simmons acknowledged that his compensation was within that range. He said that salaries for technology chiefs are only now catching up to those of line-business executives at large banks. "Senior technology executives have been underpaid because technology wasn't recognized as strategic,'' Mr. Simmons said.

That has changed. Information systems that drive banking functions such as check collection and transaction processing are viewed by top management as crucial to the business, and salaries reflect that status.

Also reported among the highest-paid information systems managers is Elaine Bond, senior vice president at the Chase Manhattan Bank. She would not confirm or deny the $300,000 to $400,000 salary range attributed to her in the report. But she noted, "People get paid what the market will bear."

Executive recruiters say it is debatable whether these technology chiefs are worth their salaries. Some believe the compensation packages in investment banking, which can include bonuses of 200% to 300% of a yearly salary, "verge on insanity," especially considering that some highly paid technology chiefs change jobs every few years. ☐

Boston's State Street Sells Account Processing Unit

By RICHARD LAYNE

NEW YORK — State Street Bank & Trust Co., which analysts have called a leading technology bank, has decided to exit one aspect of the transaction processing business.

State Street has sold its account processing business for 40 New England banks and thrifts to BISYS Inc., a Houston-based supplier of data processing to 300 financial institutions.

Boston-based State Street, which earns most of its income from data processing services, will continue to offer transaction services that it deems central to its business. The bank is by far the leading global-custody and mutual-fund processor.

Bank Departure Trend

In abandoning basic financial-institution processing, State Street is following the lead of other banks that have preferred to leave the business in the hands of nonbank competitors and a few remaining banking companies, such as Citicorp-;Mellon Bank Corp., Pittsburgh; and Marshall & Ilsley Corp., Milwaukee.

"We think this is a good deal for us," said Lynn Mangum, chairman and chief executive of BISYS, a privately held company that serves banks and mortgage companies in 30 states.

"We want to increase our presence in New England, and this gives us a grubstake," said Mr. Mangum. He refused to specify the price paid State Street.

'Out of Gas'

State Street executives could not be reached for comment on why they sold the business or whether it was profitable. Mr. Mangum said that the Boston bank's data processing service had "run out of gas."

The Boston bank was unwilling to make the investment in information technology needed to meet clients' escalating demands for more sophisticated information processing services, Mr. Mangum said. State Street processed demand-deposit and time-deposit accounts and commercial and installment loans.

The small data processing operation was unrelated to State Street's main – and profitable – lines of business.

Requirement to Focus

"This is an issue of focus – and focus is necessary to be a successful third-party processor," said Diogo B. Teixeira, a consultant with McKinsey & Co., New York.

"The banks that are successful in this are those that can continue to justify the level of investment needed every year to keep up the product offerings," said Mr. Mangum.

Industry observers said that big companies with deep pockets and many customers dominate this business. The major nonbank players include Electronic Data Systems, owned by General Motors; First Financial Management Corp., Atlanta; and FiServ, Milwaukee.

No Intrinsic Disadvantage

The presence of Mellon and Citicorp among the major players indicates that banks are not intrinsically at a competitive disadvantage. This has been more true in credit-card processing, which is highly concentrated among a handful of banks and outside processors.

In a prepared statement, George J. Fesus, executive vice president of State Street, said, "We have studied the service options for our clients, and we believe BISYS' national service is the best solution available."

BISYS customers range in asset size from $50 million to $2 billion. ☐

COMMENT/*By Stephen Axilrod*

Fed Confounds the Markets

The markets have become greatly perplexed by the Federal Reserve, the trend of interest rates, and the economy. The changing attitudes and gathering doubts of market participants about the posture of the Fed –and also about prospective inflationary and business conditions –have shaped and reshaped the yield curve.

The Fed's basic objectives should be no great mystery; its intentions have been clear for some time. It would first like the economy to slow to the point where there is at least no further threat that the rate of inflation will get worse. Eventually, it would like to attain price stability, which in practice means overall price increases of zero to 2%.

In the course of this year, some increase in the unemployment rate would probably be tolerated – a so-called growth recession –because that is needed to contain the creeping inflation of the past few years. But the Fed would like to avoid a decline in output that could reduce the rate of inflation quickly and substantially. It wants inflation to decline, but slowly and in an orderly way.

Goals Are No Mystery

The mystery then is not so much about the Fed's objectives as it is about the Fed's perception of the economy's performance.

The Fed must be no less puzzled than the rest of us. It is not privy to information about industries or consumer attitudes that is any more reliable than reports in the financial and business press.

If one looks behind the current flow of data on spending and prices, it is hard to see clear sources of economic strength. Fiscal policy in the United States is scheduled to be more restrictive in the current than in the past fiscal year.

No Weak-Dollar Effect

The last time there was a substantially contractive fiscal policy, in 1987, it was offset by the stimulative effects of a sharp drop in the dollar. But that offsetting stimulus is not available now, at least not to the same extent. Moreover, other major countries are in the process of tightening monetary policies, which will slow demand for U.S. exports.

These fundamental shifts in other policy conditions should predispose the Fed to lean toward easing credit. Indeed, it has been doing so since early last summer.

But the speed and extent of easing is uncertain, and the timing has been less than predictable. That is because easing has taken place even while the threat of inflation has by no means abated.

This means the Fed is forced to make delicate judgments about market psychology. It keeps its policy adjustments to cautious steps that depend on those judgments and on interpretation of the latest, often unpredictable and eminently revisable, economic data.

For many months, the credit markets were anticipating further easing by the Fed. The result was a yield curve that featured an overnight money market rate – essentially representing the cost of carrying securities – that was high relative to the rest of the market.

As a result, dealers and other short-term holders were losing money on their inventories because the cost of carrying the securities was greater than their yield. They were betting heavily on further price increases on the securities to bail them out.

Excessive Cost of Carry

This was a pretty safe bet for a while. But at some point the cost of carry becomes such a heavy burden that market patience wears thin. That point is reached when longer-term interest rates become so low relative to the cost of carry that further rate declines cannot be fueled by speculative demand; the risk to dealers' capital positions is finally too great.

If ultimate investors also stop being eager buyers at the same time – as they recently have in part because rates have risen in major markets abroad – the conditions are ripe for a substantial reshaping of the yield curve.

The reshaping is needed to reduce the negative cost of carrying securities and make it minimal or positive. If the Fed does not encourage that by lowering overnight money rates through monetary easing, the market will do it by causing longer-term interest rates to rise.

Recent Easing Not Enough

The Fed did ease a little further several weeks ago, but by no means enough to significantly reduce the cost of carrying debt obligations. So the market has recently made the necessary correction. Yields on U.S. Treasury notes and bonds have now backed up considerably to more viable levels under current circumstances – above 8% throughout the curve at this writing, with the long end about 8¼%.

The next substantial, sustained rally in the bond market will probably require a marked further easing by the Fed, or prospects of one – not just prospects of another cautious monetary move. Basically, that will depend on weakness in consumer spending. Absent that, and given concerns about inflation, the other forces tending to slow the economy may not carry a sufficient threat of recession to make the Fed feel it should risk abandoning its cautious approach. ☐

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

THE LOBBYISTS/*By Barbara A. Rehm*

Banks, SIA Ready To Seek an Accord On Glass-Steagall

Little has been heard of the **Securities Industry Association's** plan to bring down the Glass-Steagall barriers since the trade group unveiled its idea Dec. 1 during its annual meeting.

But the first face-to-face parley between SIA and banking trade groups may be just weeks away, sources say, and both industries may be looking for common ground.

Spencer Eccles

Top officers and staffers of the **Association of Bank Holding Companies** – led by ABHC chairman **Spencer Eccles** of **First Security** Corp. in Salt Lake City, chairman-elect **Eugene Miller** of **Comerica** Inc. in Detroit, and treasurer **Richard Simmons** of **Chemical Banking** Corp., New York – are expected in the next few weeks to begin a series of meetings with the SIA's chairman, **Robert N. Downey**, and possibly other Wall Streeters. A separate meeting between the SIA and the **Independent Bankers Association of America** is trying to be scheduled for the same day. So far, the **American Bankers Association** says it has not been in touch with the SIA.

"The SIA does want to talk to us, and just the fact that it is interested is positive," said **John Rippey**, a senior vice president for ABHC. — **Robert Trigaux**

Is the ABA Floating New Plan for Poor?

On many of the issues that affect the industry most, the American Bankers Association looks to the Republican minority on the House Banking Committee as a solid foundation of support.

But a crack developed in that foundation last month, as reports circulated among the panel's Republican staff that ABA lobbyist **Floyd Stoner** was attempting to work out a compromise on measures proposed by **Sen. Howard Metzenbaum**, D-Ohio, to provide new services to the poor.

For the record, Mr. Stoner denies vehemently that he ever suggested the possibility of compromise with Mr. Metzenbaum on his proposal to require banks to cash government checks and offer accounts for the poor.

"I have certainly not floated a compromise," said Mr. Stoner. "I have no idea where it came up."

But the Republican staff, whose support is crucial to the banking industry, believes otherwise. A number of senior Republican aides, in interviews with the *American Banker*, said Mr. Stoner did, indeed, float the idea of compromise.

Floyd Stoner

"We're not sure [Mr. Stoner's] thoughts on the issue are the same as where his members are," said one Republican aide. "We hear from banks back home, and from state (banking) associations. And all we hear is, no compromise, no compromise."

The GOP staffers believe they are in a good position to defeat Mr. Metzenbaum's proposal this year and they are furious at what they believe was an attempt by Mr. Stoner to undermine them.

— **Robert M. Garsson**

Delaware Vote Set On Sale of Insurance

Next Tuesday is judgment day for bank and insurance lobbyists in Dover, Del.

On Jan. 23 the Delaware state senate is scheduled to vote on legislation that, if enacted, would allow state-chartered banks to underwrite and sell insurance.

Francis X. Morris, executive vice president of the **Delaware Bankers Association**, says the latest round of lobbying on the bill began June 30 – the day the state legislature adjourned last year. The bill passed the GOP-controlled House of Representatives last year, but not the Senate. Bankers need 14 of 21 votes in the Senate – a long shot since Democrats control 13 votes and one of the chamber's eight Republicans is an insurance agent.

"We're trying to concentrate on those people who might be leaning on the 'no' side," says Mr. Morris. "It's going to be a very close – very close – vote."

Banking lobbyists are making their case by saying that opening the insurance door to banks would create jobs in Delaware. "We feel that one of the compelling reasons for passing it is for ecomonic development," Mr. Morris says, noting that two recent bank mergers in the state had eliminated about 300 jobs with credit card banks.

Leaders of the **Coalition of Delaware Insurance Agents**, the banks' lobbying opposition, who held a reception for the entire Delaware Assembly Tuesday night, could not be reached for comment. But **Leonard Brevik**, director of state government affairs at the **Independent Insurance Agents of America**, the national trade association for agents, insisted the legislation would force independent insurance agents out of business. ☐

What's the Word At Citicorp? It's 'Consumer'

By JED HOROWITZ

NEW YORK — Other than the Federal Reserve Board, no other American financial institution has more people on the outside watching its every move than Citicorp. This week Citicorp watchers had a field day looking through the banking giant's news and earnings reports for clues about future direction and current ailments.

The biggest message they deciphered is that, more than ever, the nation's largest banking company is betting on consumer banking to drive its earnings through the next decade.

The bank elevated consumer chief Richard S. Braddock to the long-vacant post of president of the holding company and Citibank. (For a profile of Mr. Braddock, see page 10.)

ANALYSIS
Follow-up on the news

Underscoring the development, Citicorp said it earned $842 million from retail banking activities in 1989, up 35% from the level in 1988. The retail earnings, for the first time in recent memory, outpaced combined income from commercial and investment banking activities in the developed world, according to Lawrence W. Cohn, an analyst at Drexel Burnham Lambert Inc.

Less Scope for Small

Hidden in the announcement about Mr. Braddock, however, were darker signs that corporate banking head Lawrence M. Small had lost much of his power. Though Mr. Small was named vice chairman and chairman of Citicorp's executive committee, a bank spokesman said he would no longer have line responsibility for either institutional or investment banking. The spokesman was unable to say just what Mr. Small's new duties entail.

Mr. Small, two months older than Mr. Braddock and until Wednesday his corporate equal, has a reputation as a sharp-minded manager with little patience for the niceties of working with subordinates. He works closely with chairman John S. Reed – even coordinating the planning and design of the Japanese-style executive floor that Mr. Reed conceived several years ago. But Mr. Reed's heart has always been with retail, analysts said.

Job Change Possible

In recent years, Mr. Small was rumored to have been offered positions at the top of several large banks. Analysts and former colleagues said it was now

Security Pacific to Sell Most Of Discount Broker Offices

By YVETTE D. KANTROW

NEW YORK — Security Pacific Corp., which went to the Supreme Court to win interstate branching rights for bank-owned discount brokers, is selling much of its brokerage network to one of the largest companies in the field.

The Los Angeles-based banking company said this week it has agreed to sell its brokerage accounts outside California and Arizona to Fidelity Investments, Boston, for an undisclosed sum. Security Pacific is the latest of several major banks to retreat from a business that was once viewed as an essential component of retail financial services.

A Security Pacific spokesman said the company intended to focus its discount brokerage effort on its primary banking markets in the West.

The proposed sale, of an unspecified number of accounts at 11 offices in six states, is indicative of the industry's mixed results in supplying brokerage services to retail customers. Bank brokerage units enjoyed a heyday in the early 1980s and fell from grace after the stock market crashed in October 1987.

"It can be a nice business for banks, but it's a tough business," said Greg Feltus, senior vice president of Stephens Inc., a Little Rock, Ark., company that

To Get Cash Could Raise Thrift Rates

By STEVE KLINKERMAN

DALLAS — In a move that could push up interest rates on deposits nationwide, the Resolution Trust Corp. may demand early repayment of the $11.3 billion it lent to the 169 thrifts under its control to help fund the agency's rescue operations.

The contingency plan comes at a time when the RTC is starved for cash and pleading with Congress for up to $100 billion of extra borrowing authority. If it does not get the money, the agency could face considerable pressure to step up recovery of the $11.3 billion.

By asking for quick repayment of its loans, the RTC would be forcing the 169 thrifts to seek additional deposits, often at above-market rates. As a result, healthy banks and thrifts would be forced to match those rates to remain competitive.

Rates Would Be Pressed

"This would force a substantial increase in interest rates that undoubtedly would spread nationwide," said Thomas Long, a lawyer in the Washington office of Jones, Day, Reavis & Pogue.

Bacot Imposes Conditions on Northeast Deal

By GORDON MATTHEWS

NEW YORK — Bank of New York chairman J. Carter Bacot said Thursday that Northeast Bancorp Inc. would have to agree to some tough conditions if its proposed acquisition by Bank of New York is to proceed.

The $3.5 billion-asset Shelton, Conn., banking company reported sharply lower earnings Wednesday, and Mr. Bacot said it needs to set aside a "considerably higher reserve" than it announced.

Speaking with reporters at a luncheon following a meeting with analysts, Mr. Bacot said he was more wary of Northeast because of his own bank's review of its lending portfolio. The two companies have a deal for Northeast to be acquired if Connecticut law is changed.

Mr. Bacot also told analysts and reporters on Thursday that his bank would likely have to cut 700 people at Northeast to overcome the dilutive effects of the

Annunzio Urges 'Death Penalty' For Banks Convicted in Drug Cases

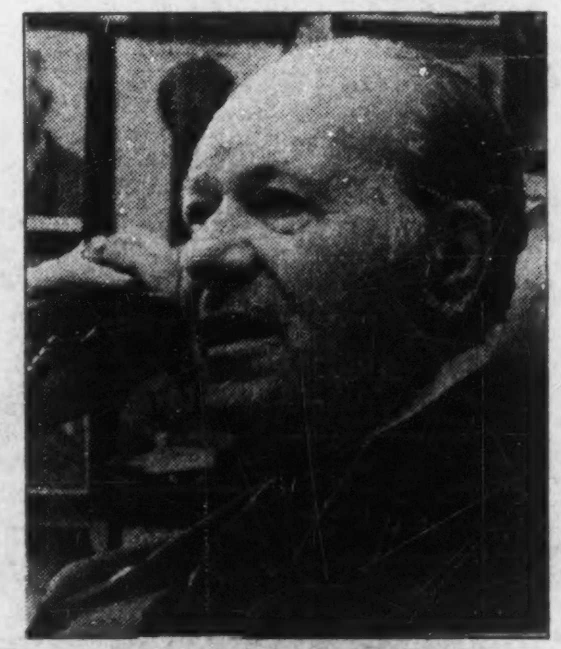
By BILL ATKINSON

WASHINGTON — Angered by the "inadequate" punishment meted out in a plea bargain this week, Rep. Frank Annunzio, D-Ill., is calling for the "death penalty" for banks convicted of money laundering: the loss of charters.

Under a bill to be introduced next week, the regulators of banks, thrifts, and credit unions would be required to revoke the charter of a convicted institution. The penalty would not apply if employees are convicted alone.

According to an aide to Mr. Annunzio, if a charter is revoked, the institution would effectively be closed. The depositors would be paid off, stockholders could lose their investment, and the institution would be dissolved. The timing for that process has not been determined yet, the aide said.

Regulators currently have the power to revoke charters for some offenses, but they are not required to do so, according to Robert B. Serino, deputy chief counsel for the Comptroller of the Currency. Charter revocations are very rare.



Rep. Frank Annunzio
Democrat of Illinois

The announcement comes just days after two international affiliates of Luxembourg-based Bank of Credit and Commerce International Ltd. pleaded guilty to money-laundering charges and surrendered $14.8 million in alleged drug profits.

It was the "completely inadequate" BCCI fine that prompted the influential Mr. Annunzio to prepare legislation. "Banks that

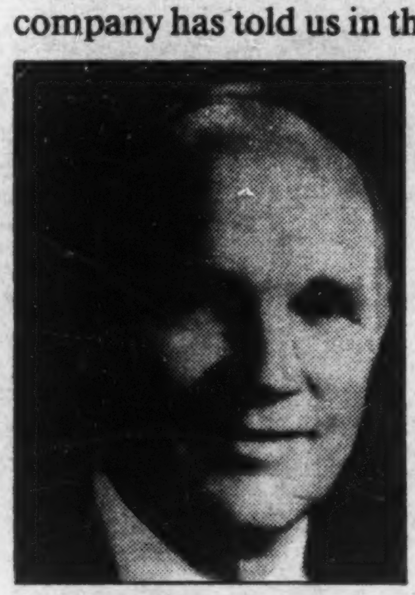
New Chief at 1st Interstate Won't Have a Honeymoon

By SAM ZUCKERMAN

Edward M. Carson, the man who in June will replace Joseph J. Pinola as chairman and chief executive officer of First Interstate Bancorp, will get no honeymoon.

Mr. Carson will find that he inherits a legacy of shattered credibility on the part of investors and analysts who say the company has repeatedly delivered bad earnings news without warning.

"There is tremendous skepticism that the company has stood up and recognized its problems," commented Lawrence W. Cohn of Drexel Burnham Lambert Inc. "It's a reflection of the fact that this company has told us in the past that it has fixed its problems, only to have those problems rear up again."



Edward Carson

There is no doubt that First Interstate's troubles are inseparably linked with Mr. Pinola, a volcanic personality who dominated the company during his 12 years in the top slot and who announced his resignation Tuesday. But Mr. Carson is not likely to benefit from his departure.

"Joe is the lightning rod," Mr. Cohn said. "[But Mr. Carson] is closely identified with Joe and the problems of the past. He's not some outsider." Indeed, Mr. Carson has spent his entire 39-year banking career with First Interstate.

Since January 1985, he has been president and a director of the Los Angeles-based banking company, with responsibility for directing the management of the company's multistate banking system.

Mr. Carson is a long-time retail banking specialist who served as chief operating officer from 1973 to 1977 and chief executive from 1977 to 1985 of what was then First Interstate's highly successful Arizona unit.

He is described as a reliable but conservative choice to guide First Interstate through its immediate financial difficulties. "He ran a very successful bank in Arizona. He knows what it takes to run a retail operation and keep a tight rein on costs," said Ronald I. Mandle, analyst with Sanford C. Bernstein & Co.

A Gentlemanly Banker

Colleagues say Mr. Carson is cut in the mold of a meticulous, gentlemanly bank executive. "Ed is a soft-spoken professional banker who knows the principles of sound banking," says Bruce Willison, chief executive officer of First Interstate Bank of Oregon.

But at 60 years of age, Mr. Carson will probably serve as chief executive officer only a few years himself before retiring. Mentioned prominently as potential successors are William E. B. Siart, 43, just named president of the holding company, and William S. Randall, 49, appointed to head the loss-plagued Arizona subsidiary.

Barring a takeover attempt, the transition from the dynamic Pinola era to what will probably be the more subdued Carson years will be marked by an emphasis on cost-control, consolidation, and repair, analysts say.

BankAmerica Core Income Climbs 2% in 4th Quarter

NCNB, Bank of NY Post Gains

BankAmerica Corp.'s 2% rise in fourth-quarter profit stood out among other banks reporting results Thursday – the California giant was the only one to reflect an increase in core earnings.

Improved results for the 1989 quarter at Bank of New York Co. and NCNB in Charlotte, N.C., included operations of new subsidiaries: Bank of New York earnings rose 94.6% with the addition of Irving Bank Corp. and NCNB's more than doubled, reflecting strong returns from its Texas subsidiary.

The deteriorating New England real estate market, as expected, sharply reduced earnings for the quarter and the year at Bank of Boston Corp.

Chemical Banking Corp.'s earnings plunged 67% in the fourth quarter, largely as a reflection of nonrecurring gains in the 1988 quarter. Chemical reported a loss for the year.

Chicago-based Continental Bank Corp. turned in the one deficit report for the quarter. It elected to sell its options clearing subsidiary — which had never fully recovered from losses tied to the 1987 crash of the financial markets — and write off some other assets. Earnings fell 53% for the year.

BANKAMERICA CORP.

Capping a spectacular turnaround from near financial ruin four years ago, BankAmerica Corp. earned $270 million in the fourth quarter, pushing full year net income past the billion dollar mark for the first time, to a total of $1.1 billion. The figure was 52% higher than 1988 earnings of $726 million.

The earnings gain was fueled by vibrant core banking operations in California and other Western states. Total loans grew to $75.9 billion, up 9.9% from

Darrell Knudson

Loss Lowers Confidence In First Bank

By LISABETH WEINER

CHICAGO — First Bank System's disclosure this week of worsening credit problems has further damaged its credibility with Wall Street and has undermined the chances of the company's acting chief executive to remain at the helm of the company.

Darrell Knudson, a 31-year veteran of First Bank who has been acting chief executive since September, will likely have to relinquish the top spot to an outsider. He is, however, expected to remain vice chairman.

"We don't know the extent of their problems," said bank analyst Thomas Brown of PaineWebber Inc. "There's been a loss of confidence."

First Bank System attributed the $107 million fourth-quarter loss posted Wednesday to a sizable increase in its loan-loss provision due to higher net chargeoffs and additions to reserves. It said this action was based on a "rigorous review of our loan portfolio in the fourth quarter, taking into account the deterioration of conditions in a number of economic sectors."

No Surprises Expected

Although a number of banks reported increases in problem loans during the third quarter,

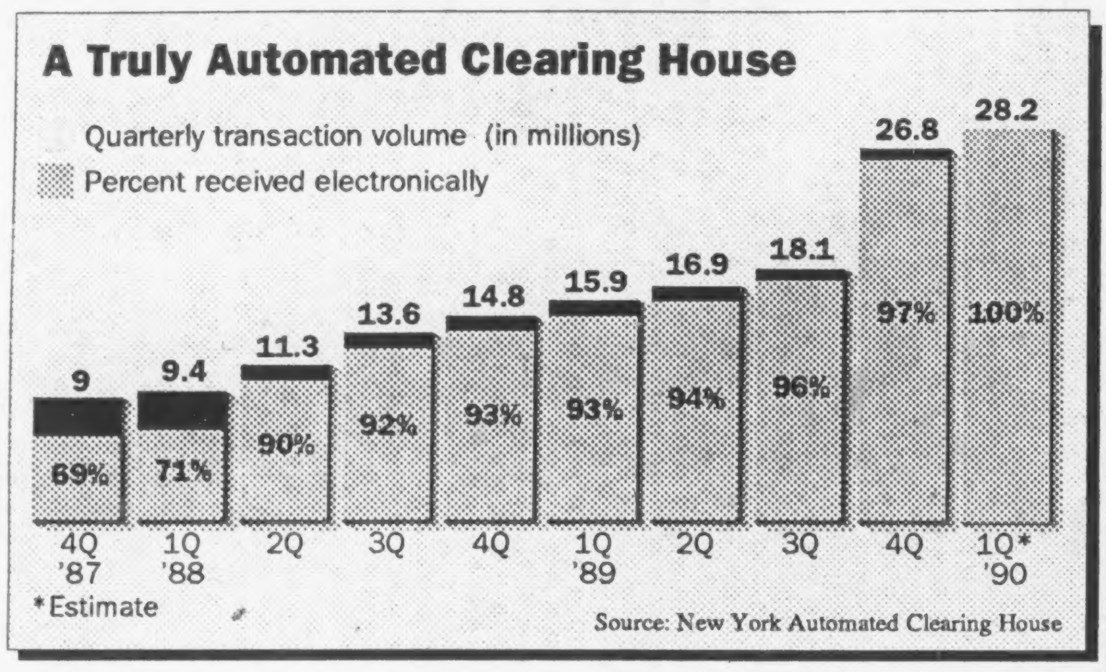
NY Clearing House Goes All-Electronic

Move Will Cut Processing Fees

By RICHARD LAYNE



Source: New York Automated Clearing House

NEW YORK — Capping a two-year effort, the New York Automated Clearing House has become a completely electronic operation and the first of the regional clearing houses to fully automate its transaction processing.

The New York clearing house, the third-largest processor of paperless transactions in the national ACH network, said this week that it has achieved full automation of financial transactions, cutting processing costs for its banking customers to the bone. The New York group has thus opened the door to an all-electronic clearing house network, which the Federal Reserve System said could attract more business through a relaxed deposit schedule.

Technology 'Essential'

"Effective use of computer and communications technology is essential to accommodating growth and maintaining efficiency in modern banking," said John F. Lee, president of the New York Clearing House Association, parent of the automated clearing house.

"One hundred percent electronic status is the ultimate goal for an automated clearing house," he said.

While the New York clearing house announced full electronic service this week, it actually finished the conversion of its depository institutions at the end of 1989. As of Jan. 2, the clearing house no longer processes automated clearing house transactions delivered via paper or magnetic tape.

The all-electronic operation has cut the cost of a transaction down to "pennies," said William M. Walsh, senior vice president at the New York Clearing House.

Mr. Lee said, "I don't see how we could get much lower."

Improved Security

Full electronic service has benefits beyond lowered operating costs for the the 793 banks and credit unions that use the clearing house. "Electronic funds transfer is the most secure, timely, and reliable delivery mechanism," said Mr. Walsh.

The big banks in the New York clearing house converted to electronic processing early in the two-year plan. Mr. Lee said that the past year was devoted to convincing smaller institutions to receive payments via a personal computer and phone lines, instead of magnetic tape or paper.

"The technology is simple, but they had to be persuaded," said Mr. Lee.

1991 Targeted

In June 1989, the board of directors of the National Automated Clearing House Association urged the Federal Reserve Board to establish June 1991 as a target date for the conversion of the entire ACH network to an all-electronic operation.

"The long-term gains in efficiency more than outweigh the short-term expenses, both for participants and automated clearing houses," said Mr. Walsh.

No target date has been set so far by the Federal Reserve, although it concurs with the all-electronic goal. "The Federal Reserve has indicated that it plans to aggressively pursue the concept of an all-electronic automated clearing house," said Richard Oliver, product manager for electronic payment services at the Federal Reserve.

Later Deadlines Ahead?

The Fed believes that a network of all-electronic clearing houses may allow it to offer later deposit deadlines to accommodate more transactions through the nationwide clearing house network, which handles more than one billion government and private-sector items a year.

The current deposit schedule requires that a bank enter an ACH credit into the system as many as two days before payment is due. That early deposit schedule, which allows time for paper and magnetic-tape entries to be delivered by truck, discourages some corporations from using the automated clearing houses.

Mr. Oliver said that the Federal Reserve will officially release for use nationwide three software products to facilitate the move by financial institutions to full electronic funds transfer. ☐

In Wake of AT&T Mess, Banks Reexamine Strategy

By KAREN GULLO

NEW YORK — Bankers are rethinking strategies for protecting their communications networks against failures as a result of the major disruption of AT&T long-distance service on Monday.

Communications is the lifeblood of many bank services and operations, such as credit card processing and customer service.

While most banks were not affected by the problems because they were closed for the Martin Luther King holiday, many are examining safety features to determine whether they can continue to operate during a severe outage.

Confidence Shaken

The recent outage, caused by a software glitch in AT&T switching equipment, blocked thousands of long-distance calls from being completed for nine hours. Confidence in the reliability of AT&T's network among bankers has been severely shaken as a result.

"It was quite eye-opening," said Patricia Farwig, vice president of information processing at Mellon Bank, Pittsburgh. "We're going back through all of our locations and confirming that backup exists.

"We want to make sure that our hardware is upgraded for equal access to both of our long-distance companies," she said. Mellon uses services from both American Telephone and Telegraph Co. and MCI Communications Corp. The bank was unaffected by the outage because of its two-carrier approach and because of the holiday.

Some Unprepared

Many other banks were also able to continue business as usual because they use more than one long-distance company. But not all businesses were prepared.

First Data Resources, Omaha, a bank-card processing company owned by American Express Co., uses three long-distance companies. But two services – point-of-sale transactions and voice authorizations for credit cards – use only the AT&T network and were severely impaired by Monday's disruption.

Ed Koch, director of telecommunications operations, said the company now believes it must have a backup network.

"But the problem is how to implement that," he said. "It's not a trivial matter. We want to publish a single authorization number for our merchants. If we use another service, we'll have to publish more than one number."

Some bankers are rethinking plans to switch from private dedicated networks to a service known as virtual networking, where customers' communications share a portion of the public long-distance network. Virtual networking, offered by all long-distance companies, can be much less expensive than private networks because the customer does not have to bear the costs of maintaining dedicated telephone lines. Another big selling point for virtual networks has been the reliability of the public phone network.

This week's disruption "destroys that argument," said Ms. Farwig. "You really need a mixture of services."

Henry Watkins, assistant vice president for telecommunications at Boatmen's Bank, St. Louis, said the bank has been reviewing virtual networking as an alternative to its current private network. He said Boatmen's would not use a virtual network as its only form of communications. "If I was looking at it as a total replacement, what happened this week would make me a little uneasy," he said. ☐

COMMENT/By A. Thomas Loy

Hard Dollars Go Further In Paying for Bank Services

Soft-dollar (implicit) pricing arrangements are seldom a justifiable substitute for hard-dollar (explicit) payments. In soft-dollar arrangements, idle balances left on deposit with a financial institution serve to compensate for correspondent-related services like check processing, data processing, safekeeping, loan participations, and wire transfers.

These services are periodically assigned an earnings credit, usually based on the prevailing federal funds rate, which determines the amount of balances necessary to compensate for the services. In contrast, traditional hard-dollar payments are made monthly by check or wire transfer.

Soft-dollar payments have a long and controversial history in commercial banking. Correspondent banks traditionally made bank stock loans (that is, loans to individuals to purchase controlling interest in a bank) at an interest rate substantially lower than prevailing market rates.

The low interest rate was offset by noninterest-bearing compensating balances maintained at the lending bank by the purchased bank. This practice surreptitiously caused a portion of the loan's interest to be paid indirectly by the bank's minority stockholders (who obviously had no desire to assist in the financing of the buyer's stock), and was prohibited under the Financial Institutions Regulatory Act of 1978. Such arrangements, however, are still practiced clandestinely.

In today's deregulated and oversaturated financial services industry, to choose soft-dollar payments is to render part of the bank's due-from banks into a de facto earning asset - and not a very good one at that.

Independent of the issue of reserve requirement maintenance, a soft-dollar, or compensating, balance brings virtually none of the benefits - such as liquidity for loan demand or deposit attrition - of the money market instruments of which it is a facsimile. Soft-dollar balances produce an inadequate yield and do not justify capitalization.

A bank opting for soft-dollar payment is exempted from being assessed a reserve requirement in its own computation, because a deduction is allowed for due-from banks' balances. However, if the downstream bank is subject to a 3% reserve requirement, rather than the upstream due-from bank's typical 12% reserve requirement, then the downstream bank incurs a de facto 9% reserve requirement penalty assessed by the upstream bank.

> **'Soft-dollar payments have a long and controversial history in commercial banking.'**

Hard-dollar payment bypasses this intrinsic account analysis penalty, thus more than offsetting the benefits, if any, of soft-dollar payment. It even offsets a hard-dollar surcharge, if one exists, of up to 9.89%.

The benefit of eliminating this account analysis penalty is independent of the underlying earnings analysis rate, and therefore is valid regardless of the prevailing federal funds rate (assuming that to be the basis for the earnings rate).

Time Value Is Factor

Besides the reserve requirement benefit, the time value of money also adds to the preferability of hard-dollar payments. The hard-dollar payment is not made until after the end of the month, and the soft-dollar payment is typically made via a fairly constant average daily balance in the account.

Therefore, the hard-dollar method benefits from the compounded earnings on the amount of the soft-dollar balance, as well as the additional, though nominal, compounded earnings on the hard-dollar payment itself for whatever length of time after the end of the month until the payment is due.

Earnings Rate Is Marginal

It should be noted that when compounding is considered, the earnings rate emerges as a fairly insignificant variable.

Assuming an earnings analysis rate of 5% and a reserve requirement penalty of 9%, the compounded hard-dollar benefit is equal to 9.91% of the amount of the hard-dollar charge. Assuming an earnings analysis rate of 20% and the same reserve requirement penalty of 9%, the compounded hard-dollar benefit is equal to 10.36% of the amount of the hard-dollar charge.

For example, with a $1,000 hard-dollar charge (assuming no surcharge for hard-dollar payment) and a compounded 20% fed funds analysis rate, the saving realized from opting for hard rather than soft dollars is $103.60.

This compares with a similar saving of $99.10 for a compounded 5% fed funds analysis rate, and with an uncompounded saving, independent of the earnings analysis rate, of $98.90. ☐

FUNNY MONEY/By Tom Leander

Define 'Observe'

Many banking companies apparently find it hard to decide how to honor Dr. Martin Luther King's birthday.

After originally announcing it would open, Wells Fargo & Co. reversed itself three days beforehand and joined its two rivals in closing for the holiday.

Of California's big four banking companies, only Security Pacific Corp. chose to do business. All but a handful of its 557 retail branches opened on Jan. 15. A press release announcing the policy was headlined: "Security Pacific Observes Dr. Martin Luther King Jr.'s Birthday."

* * *

Unsecured? No Way

As the news about Campeau Corp.'s filing for bankruptcy protection reverberated on Tuesday, four banking companies hastily sent out releases dissociating themselves from the mess.

That same day, Northern Trust Corp., Chicago, issued a terse statement on the PR Newswire: The company "is not a lender to Allied Stores Corp. nor to any Campeau entity." Shawmut National Corp., Hartford, Conn., issued a similar statement, followed the next day by Manufacturers Hanover Corp. and Bank of Boston Corp.

Federal Bankruptcy Court in Cincinnati had released a list, picked up Tuesday by newspapers and news wires, of Campeau's "unsecured creditors." The list included the four bank holding companies.

Northern Trust, Shawmut, Manufacturers, and Bank of Boston are not holders of Campeau bonds but are trustees for Campeau bondholders.

Big Stink

What do California hamburger franchises and banks with drive-up teller windows have in common? In the Los Angeles area, they're causing a smog problem, according to a California group that regulates air quality.

In Los Angeles, one of the nation's busiest traffic cities, idling cars waiting on lines to be serviced at drive-up windows are adding to the smog problem, according to the South Coast Air Quality Board, a watchdog body.

The group is considering a proposal to shut down the drive-up windows, said board member Lawrence Berg.

Another First

The North Carolina League of Savings Institutions may make grandiose claims to tout its conferences.

But it doesn't mess around with the facts.

Thad Woodard, the group's director, has send out a flier announcing the "first major secondary mortgage market conference held in the continental United States this year."

Before that conference kicks off on March 3, Mr. Woodard said, another secondary mortgage conference will have been held - in Hawaii.

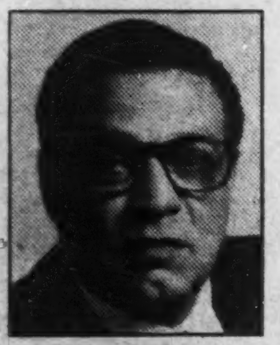
The Duel Continues



David L. Paul

A legal battle between the president of CenTrust Savings Bank and Florida Comptroller Gerald Lewis took a new turn last week, when CenTrust filed suit against the Miami law firm that represents the Comptroller's office.

The suit alleges that Steel Hector & Davis is violating Florida bar rules because one of the firm's partners was formerly a general counsel at CenTrust and represented the bank on matters substantially related to the subject of the proceedings recently brought against CenTrust and David L. Paul, its president.

The comptroller has been seeking to oust Mr. Paul for allegedly spending $45 million in federally insured deposit for extravagant purchases, such as 15-carat gold nails used on a $7 million yacht owned by a company he controlled. Mr. Paul could not be reached for comment.

Scandal

Several bank-related incidents figure the 1990 *Scandal Annual*, a book released this week by St. Martin's Press. A survey of last year's most dubious behavior, the book includes the looniest bank robberies and chronicles several bank embarrassments.

And under the category, "Boy, Is That Dumb!" it recounts the following yarn:

A teller at the former Old National Bank of Washington in Spokane refused to serve a man who showed up at the teller window dressed in dirty construction clothes. The spurned man turned out to have $2 million on deposit at the bank and, in a fit of anger, transferred it to another institution the next day. ☐

Mortgage Bank Companies Boost Wholesale Purchases

Marine, Fleet Embrace Strategy

By PHIL ROOSEVELT

NEW YORK — Mortgage banking companies, seeking to augment the loan originations of their retail branches, are increasingly buying production from other lenders.

Some of the industry's giants, such as Fleet/Norstar Financial Group, are using wholesale originations to feed their enormous servicing portfolios. But a number of smaller outfits also are embracing the strategy, saying it is potentially less costly than retail originations.

Wholesale production "is definitely a trend - and a big one," said Warren Lasko, executive vice president of the Mortgage Bankers Association of America.

Purchases Up 79%

Underscoring this, a group of 58 mortgage banking companies active in wholesaling boosted their purchases by 79% last year, according to a survey by Asset-Backed Capital Group, Cleveland. The companies plan to boost their wholesale production by another 22% this year.

Marine Midland Mortgage Corp., a unit of Marine Midland Bank, led the pack in 1989, buying $6 billion of loans, the survey found. Fleet Mortgage Corp., one of two Fleet/Norstar mortgage units, was No. 2 with $4 billion. Citicorp Mortgage Inc., St. Louis, was next with $3.1 billion.

Asset-Backed Capital defines wholesale originations to include virtually all types of loan purchases from correspondents and others. But the company excludes purchases of servicing rights separated from loans.

Growing Portfolios

The Fleet/Norstar units, when combined, purchased $6.6 billion of loans. That accounted for about 73% of the company's estimated $9 billion total of home loan originations. The total rose sharply from about $5 billion in 1988, helping boost Fleet/Norstar's servicing portfolio to $41 billion from $31 billion in 1988.

"When you have a big servicing portfolio, it takes quite a flow of new volumes to keep that portfolio growing," said Andrew D. Woodward Jr., president of Fleet/Norstar mortgage banking division. "The costs could be prohibitive to try to do this singly in a retail way."

Difficulties with Cost Control

Many analysts point to the mortgage market's volatility during the mid-1980s as the catalyst for the surge in wholesaling. As total volume rose to a record $454 billion in 1986 - and then dropped to $374 billion in 1988 - many lenders had difficulty keeping costs under control in large branch networks.

"The constant opening and closing of branches distracted our senior managers and drove up our costs," said Ronnie J. Wynn, president of the relatively small Colonial Mortgage Co., Montgomery, Ala., and president of the Mortgage Bankers Association of America.

As a result, he said, Colonial increased its wholesale originations to 65% of its total last year from 25% in 1988. That mix, he maintained, should prove less costly over business cycles in the long term, though industry data on wholesale costs is sparse.

Meanwhile, Margaretten & Co., a major retail originator, may start a wholesale operation early this year. The Perth Amboy, N.J.-based unit of Primerica Corp. said it would aim the effort at the large California market, where it has no branches.

"We believe the profits are not as good in wholesale as in retail, but wholesale is still profitable," said Felix Beck, chairman of Margaretten.

The rise in wholesale production has been helped by a steady increase in loan sellers. Some are are lenders who routinely unload a portion of their production to boost profits, while others operate essentially as brokers, said Thomas La Malfa, research head at Asset-Backed Capital.

Fear of Losing Control

The increase in wholesaling "highlights the growing prominence of mortgage brokers, who are low-cost producers and need outlets," Mr. La Malfa said.

Still, not all mortgage banking companies are jumping into wholesale production. Many are holding back because of a fundamental fear of losing control over their loan production, said Mr. Lasko.

To some executives, he said, wholesale production means "handing over your destiny to someone you don't control."

The greatest risk, of course, is purchasing bad loans. As a result, Mr. Wynn and others stress that any entering the field must be prepared to redouble their quality control efforts. □

SECURITIES

Advantage Seen in Fannie Maes, Freddie Macs over Ginnie Maes

NEW YORK — Investors may have become less worried about a heavy selloff of mortgage-backed securities by troubled thrifts, but there are still lingering concerns.

Analysts at First Boston Corp. say that such concerns - coupled with jitters about real estate - have made certain Fannie Mae and Freddie Mac securities into bargains, compared with their Ginnie Mae cousins.

In a report this week, First Boston dismisses the concerns as more perception than reality. The report advises investors holding the Ginnie Maes, or securities of the Government National Mortgage Association, to sell those and buy Fannie Maes, or securities of the Federal National Mortgage Association, and Freddie Mac, or the Federal Home Loan Mortgage Corp.

First Boston bases its case mainly on securities with coupons slightly below current coupons. For example, the yield spread of Ginnie 8s over Treasuries - adjusted for prepayment risk - tightened to about 77 basis points early this week from 90 points in mid-December, First Boston says. But this "option adjusted" spread for Freddie Macs diminished much less rapidly, to 94 basis points from 100.

Andrew Carron, First Boston's director of mortgage research, said in an interview that investors may be concerned about the federal government liquidating whole mortgages held by insolvent thrifts. Loans held by thrifts are more likely to be sold as Fannie Maes and Freddie Macs than as Ginnie Maes, he notes. And investors may think the thrifts already have sold mortgages with higher coupons.

How Much Liquidation?

The Resolution Trust Corp. indicates that thrifts currently under its wing hold about $40 billion of whole loans. But, Mr. Carron noted, it is unclear how much of that will be liquidated and how much will meet the criteria for securitization through Fannie Mae and Freddie Mac.

Credit concerns may also be influencing the relative spreads among the three types of securities, First Boston says. Recent press accounts about deteriorating real estate markets have focused on pending government studies on the capital adequacy of Fannie Mae and Freddie Mac.

"Some investors perceive that if Congress is looking into this, there must be a problem," Mr. Carron said. "What is not well understood is that Congress is concerned about risk to the government, not risk to the investor."

Fannie and Freddie securities, he noted, carry the implicit backing of the government.

— **Phil Roosevelt**

TALKING *markets*

Who Won, Lost Market Share? It's Debatable

NEW YORK — Big, nationwide mortgage originators that want to gauge their 1989 volume against "the market" may have a tough time: Analysts differ widely on the market's own volume last year.

Depending on who is talking, home mortgage originations by all lenders fell as much as 10% from 1988 or rose by as much as 7%.

As a result of such divergence, "It's well nigh impossible to tell what your market share is with any precision," says Fred B. Koons, president of Chase Home Mortgage Corp. of Tampa, Fla. His own bet is that the market was flat to slightly down.

HUD's 9-Month Estimate

Many mortgage specialists rely on the Department of Housing and Urban Development, which provides monthly estimates of the total market, based on volume levels at a sample of lenders. So far, HUD's 1989 estimate covers the nine months through September: down 13% from the year earlier period, to $253.6 billion.

Based on that count, the full-year total should be $335 billion, down from $374 billion for 1988, says John Savacool, housing economist at the WEFA Group of Bala Cynywd, Pa.

The Federal Home Loan Mortgage Corp. has a similar estimate: $340 billion. But the Federal National Mortage Association, though also using the HUD data, has come up with a higher number: $363 billion.

1986 Was The Peak Year

Of course, all of these estimates suggest that nationwide volume fell, at least by some amount, for the third year in a row. Originations peaked in 1986 at $454 billion, according to HUD.

But the Mortgage Bankers Association of America maintains that originations actually rose in 1989. Economists at the trade group estimate $390 billion of originations in 1989, up from their count of $365 billion for 1988.

"We're not trying to predict what the HUD number will be," said Richard Peach, the association's deputy chief economist. "Why would we want to do that? The HUD number is just one estimate, based on a sample."

Mortgage Firms Report Surge

Rather, Mr. Peach said, his group's totals are based on its own analyses of housing starts, home sales, home prices, and indications of refinance volume.

While observers have long raised questions about the HUD survey, attention recently has focused on the survey's findings about market share held by mortgage companies.

HUD has shown the share hovering around 20%, even as several large mortgage companies have reported surging originations. Sears Mortgage Corp., Riverwoods, Ill., for example, says its originations jumped to $3.1 billion last year from $1.8 billion in 1988 - a gain of 72%.

Not surprisingly, projections for total activity in 1990 also vary.

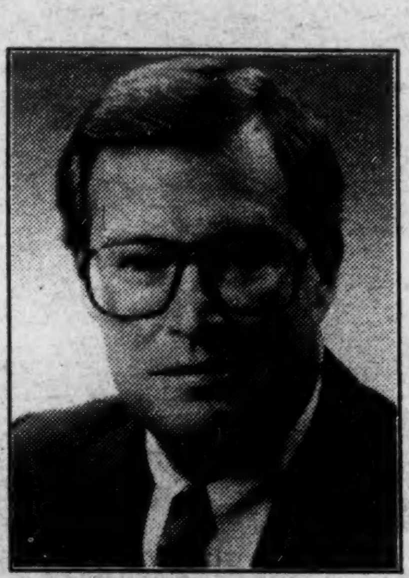
SMALL BUSINESS

BancOhio Uses Big Bankers To Cultivate Small Clients

By LAURYN FRANZONI
Special to the American Banker

Many bankers are taking care of small business in their retail departments. But "in reality, small-business lending is just as difficult as lending to larger corporations, if not more so," says William P. Blakeway, senior vice president of BancOhio National Bank's Metro Ohio division in Columbus.

Rather than compartmentalizing its small-business specialty, BancOhio has taken an interdisciplinary approach, breaking down some of the cultural walls dividing retail and commercial bankers and creating a cadre of experienced small-business bankers covering a multistate territory.



W.P. Blakeway

BancOhio officials say the strategy is profitable and attracting attention from competitors. Outsiders are praising the bank for tailoring its strategy to various markets, differentiating itself from more rigidly structured competitors.

"Banks in Ohio are tackling small business on a local level, reacting to the market on a city-by-city basis," says Susan Wolf of Omega Consultants, a San Francisco company that helps bankers set sales strategies. "What BancOhio does is highly unusual because it overcomes the rivalry between retail and commercial structures, which often sinks the efforts."

BancOhio's operating plan is based on three key elements: a multistate team of some 250 retail and corporate lenders, a sophisticated computer data base, and an intangible called "Red Carpet Service." The structure, implemented two years ago, has resulted in an estimated 35% to 40% market share for the bank's business and professional lending group, known as B&P.

The group consists of nine officers based in the Columbus headquarters. They are experienced corporate lenders who coordinate much of the bank's marketing and service for small-business clients.

In addition, 60 offices in Franklin County have been divided into nine districts, each served by a district account officer. These officers support branch managers and staff by acting as the areas' senior retail lenders and as liaisons with the central B&P staff.

Web Covers Many Relationships

Throughout the BancOhio region of Ohio, Indiana, Pennsylvania, and West Virginia, a web links more than 130 branches and their people in developing small-business relationships. With all that territory to cover, Mr. Blakeway says, the district officers play an important role in speeding response to loan applications and insuring that the bank gets complete financial information from customers.

When a customer gets in touch with a branch officer, information flows upstream to the B&P group. Simultaneously, B&P officers are calling on prospects and serving existing accounts. The whole effort is tracked by a computerized account management system the bank designed to fit the small-business development plan.

Each January, all businesses in the market area are listed in the data base and assigned to bank officers based on existing customer contacts. Noncustomers are assigned to officers with an indication of how many calls will be made on that prospect that year.

Training Sessions Held

Along with their communications and coordinating functions, the district officers play an educational role for bank employees and customers. Mr. Blakeway says his liaison people hold training sessions such as mock credit committee meetings so that newer officers can practice making presentations and develop more confidence.

"The liaisons take a real interest in what's happening at the retail level and work to make sure the retail people are making inroads in their small-business markets," Mr. Blakeway says.

Back at headquarters, the B&P officers develop specialties, including ties with the Small Business Administration and state agencies. The bank has excelled in loans in conjunction with the Ohio Department of Transportation for short-line railroads.

Officers Given Credit

Mr. Blakeway, credits his individual officers – not the structure – for the plan's success. In 1989, business was up 20% over the level in 1988, its first year; B&P lending had virtually no chargeoffs and delinquencies of less than 0.5%.

"Most banks have very similar products," Mr. Blakeway says. "One thing we do is have better service and better people. We're relationship-oriented. We try to go beyond what the customers expect us to do by trying to anticipate their needs."

For example, the bankers are not above proposing solutions when customers' initial business plans do not pan out.

Mr. Blakeway warns against relegating small-business banking to second-class citizenship. He recalls that, when the Wendy's fast-food chain opened its first store, it banked with a neighboring BancOhio. Today, as an international chain, it's still with BancOhio.

Lauryn Franzoni is a freelance writer based in Springfield, Mo.

Braddock's Path: Campus to 'Consumer'

By JED HOROWITZ

NEW YORK — Twenty-seven years ago, Richard S. Braddock roamed the campus of Dartmouth College with his pals Louis V. Gerstner and Paul Binder, talking of history, politics, sports, and girls.

Friends say the word "consumer" never passed their lips.

Today, Mr. Braddock and Mr. Gerstner are giants of consumer marketing, the former as the new president of Citicorp and Citibank, the latter as chairman of RJR Nabisco Inc. Mr. Binder, founder and ringmaster of the Big Apple Circus, also knows a thing or two about pleasing the American consumer.

Mr. Braddock's elevation at Citicorp this week reflects the primacy of consumer banking both at the largest U.S. banking company and industrywide.

Rock, and Aura of Success

Back at Dartmouth, where Mr. Braddock entertained friends with early-'60s rock hits, there was no doubt he would be a success.

"Rick has always been very serious and intense but with a good sense of humor and a balanced sense of self," said John Farnsworth, a classmate and former banker who is an executive recruiter in San Francisco.

"The guy has a mind like a steel trap," said one subordinate, who asked not to be named. "He can move from one business to another and latch onto the key strategic issue quickly. He knows how to cut through a lot of bull in an aggressive but fair way."

A New Breed

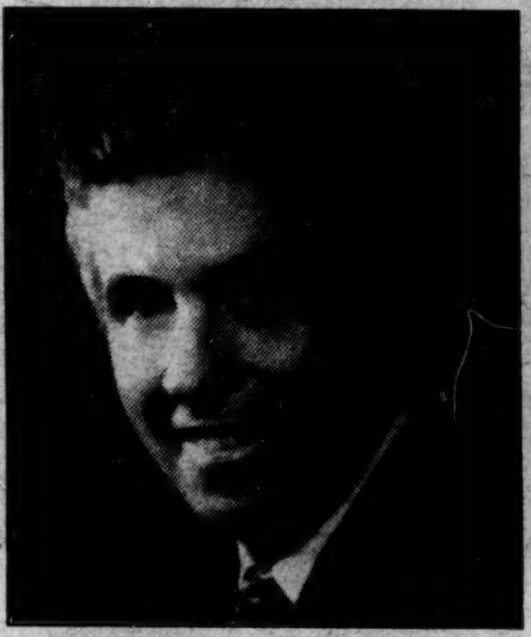
Mr. Braddock, 48, is the new breed of banking leader who has never made a loan but manages large-volume, technology-intensive consumer banks. Through a combination of luck and drive – insiders say he lobbied hard to be named president – he helped put the consumer business in the forefront at Citicorp.

Two years ago, Citicorp chairman John S. Reed, himself a retail banking veteran, said he expected 65% to 75% of the company's earnings in the 1990s from the consumer sector.

In the fourth quarter of 1989, the consumer segment – which includes a U.S. branch network, an international group, private banking, and credit and charge cards – outperformed all other Citicorp businesses for the first time in recent memory.

Marketed Orange Drink

Mr. Braddock learned his craft at General Foods Corp., where he was a product manager for Tang, the powdered orange drink. He joined Citibank in 1973 as a vice president in its New York branch system.



Richard S. Braddock
Citicorp

Richard Kovacevich, president of Norwest Corp. and a former retail executive at Citicorp, said Mr. Braddock's style is thorough and methodical. "It's typical of someone with packaged goods experience," the Minneapolis-based banker said. "You do proper testing and research and make your findings about customer needs. Then you develop the product."

"John Reed deserves the credit for building the consumer business, but the execution of that strategy lies at the doorstep of Braddock," said James J. McDermott Jr., an analyst at Keefe, Bruyette & Woods Inc. "He's top-notch." ☐

Security Pacific to Exit Brokerage Business in 6 States

Continued from *page* **1**

supplies clearing and execution services to bank-owned brokerages and other broker-dealers. "You have to be lean, and you have to be conscious of cost."

Among banks, Security Pacific was a pioneer in the field when it founded Security Pacific Brokers in 1982. It was followed by Bank of America's purchase of Charles Schwab & Co., the nation's largest discounter, in 1983.

The trend gained momentum in 1984 when Security Pacific and Union Planters National Bank, Memphis, successfully defended their growing discount brokerage networks in a Supreme Court case brought by the Securities Industry Association. But it soon became clear that brokerage was not as attractive as many bankers first thought – a notion reinforced by Bank of America's 1987 decision to sell its unit back to Schwab's management.

Other banks that have sold or cut back their discount brokerage businesses include Chase Manhattan Bank, New York, and Fleet/Norstar Financial Group, Providence, R.I. Last summer, Marine Midland Banks Inc. sold 18,000 customer accounts to Quick & Reilly Inc., a New York brokerage house.

"It has just proven that [banks] really don't belong in the business," said Tom Quick of Quick & Reilly.

Still, some bank-owned brokerage businesses are reporting a return to profitability. Industry watchers point to such successes as Key Brokerage Co., owned by KeyCorp of Albany, N.Y.; Market Investment Services, owned by Union Bancorp., Los Angeles; and First Union Brokerage Services Inc., owned by First Union Corp.; Charlotte, N.C.

Fidelity Investments, which bills itself as the largest privately held mutual fund and discount brokerage company, will officially acquire the Security Pacific accounts Jan. 26. The Security Pacific branches are in the following 11 cities: Dallas; Houston; Florham Park and Garden City, N.J.; Memphis, Tenn.; New Haven, Conn.; New Orleans; and Jacksonville, Orlando, Ormand Beach, and Plantation, Fla. ☐

The Bank Rate Monitor Index is the average of rates being charged by the 100 largest banks and thrifts in the nation's 10 largest markets on the dates indicated. Other rates quoted are the lowest and highest offered at the same institutions. Auto loan rates are for a $9,000, 48-month, new-car loan with a 20 percent down payment. Personal loan rates are for a $3,000 unsecured personal loan with a 24-month term. Credit card rates are fixed rates only and do not take into account differing annual fees or grace periods.

Revoked Pacts A Blow to S&Ls, But Not Fatal

By STEVE KLINKERMAN

DALLAS — The recent decision by thrift regulators to revoke agreements that softened capital rules for sick thrifts that were acquired in the past 10 years is a major setback to many of these institutions. But it is unlikely to prove the death knell that some observers had expected.

"The decision by itself shouldn't drive anybody over the brink and into the clutches of the Resolution Trust Corp.," said John Robinson, deputy director of supervision for the Office of Thrift Supervision.

To varying extents, the OTS decision affects 411 institutions that were acquired with federal assistance since 1980, said Mr. Robinson.

ANALYSIS
Follow-up on the news

He said the specific impact on each institution would not be known until each of their assistance contracts is examined, a process that will likely take several months.

Many of the affected institutions already were candidates for federal takeover because of other capital changes mandated by Congress, such as the limiting of goodwill as a component of core capital.

In New York, for example, Empire of America Savings Bank had $714 million of goodwill disallowed as capital. It finished the third quarter of 1989 with a $53.5 million capital deficit, and is seeking open thrift assistance.

Shareholders Underwater

The OTS decision further hurts Empire's finances because it can no longer count government-owned stock as capital. "Shareholders already are underwater, so it doesn't matter," said Empire spokesman Lynn Casteel.

But the recent OTS contract abrogations have a big impact on thrifts rescued in 1988, especially those in Texas.

In Dallas, American Federal Bank at Sept. 30 fell $30 million short of the core capital required to support its $3 billion of assets. Its chairman, William Gibson, resigned abruptly late Wednesday.

Canceling Growth Plans

At best, American Federal will have five years to make up the shortfall, instead of the ten years it would have had if the OTS had not changed the rules. It has canceled plans for growth and acquisitions – an action taken by many thrifts affected by the OTS decision – and is rushing to

2d Thrift Bill Takes Shape, But Congress Is Reluctant

By ROBERT M. GARSSON

WASHINGTON — When the law restructuring the thrift industry was signed five months ago, no one expected Congress to tackle the issue again in any substantial way anytime soon. And until a few weeks ago, that was still widely believed.

But now, measure by measure, the ingredients for a new thrift bill are beginning to fall into place.

This is the last of a four-part series examining the impact of the thrift-bailout law.

Some of the key questions being raised as Congress prepares to reconvene Tuesday:

- Should the Office of Thrift Supervision, created under the bailout law, be disbanded and its supervisory role be turned over to other regulators?
- Should the five-member board overseeing the Resolution Trust Corp. be scuttled because it is slowing the sale of seized thrifts?
- Should the RTC be required

Bank of New England Sees $1.2 Billion Loss

Talk of Closure by Regulators Sweeps Wall Street

By JOHN FORDE

NEW YORK — Revealing even deeper loan woes than previously indicated, Bank of New England Corp. on Friday estimated it would post a $1.2 billion loss for the fourth quarter, one of the largest ever in banking history.

And in what many observers saw as a last-ditch effort to stave off failure, the Boston-based banking company announced it would sell $6 billion in assets and enter into a consent order with federal regulators that will outline a plan to get itself back on track.

Time to Build Equity Capital

The company said its fourth-quarter loss would be caused by a special $1.5 billion provision against credit losses. For the year, Bank of New England expects to lose $1.05 billion. The bank also disclosed various parts of a strategy meant to rebuild its equity capital, which analysts estimate has sunk to about $500 million, or less than 2% of its assets.

The news hammered the price of Bank of New England's stock down by $1.625, to $2.875, Friday as rumors swept the market of a possible closing of the company by federal regulators over the weekend. A Bank of New England spokeswoman denied the reports, however, saying that "as you can see by the strategy we've laid out, we plan to be around for a while."

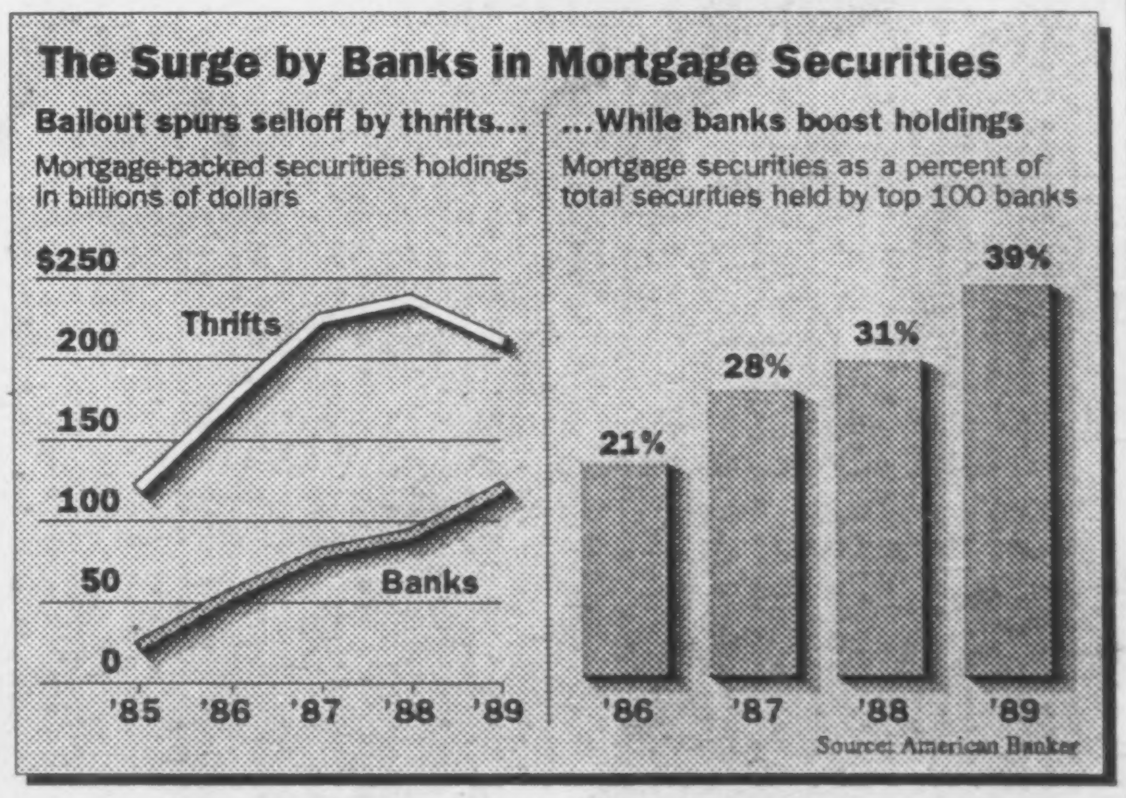
Banks Load Books with Mortgage-Backeds

By PHIL ROOSEVELT

NEW YORK — In a dramatic example of commercial banks' increased involvement in home-mortgage finance, the 100 banks with the largest mortgage-securities portfolios increased their holdings by 52% in the year ending Sept. 30, an *American Banker* survey has found.

The buying spree means that 39% of all securities held by the banks are now mortgage-backed bonds, up from 31% at yearend 1988.

Moreover, experts say, banks are likely to remain bullish on mortgage-backeds, largely because of incentives in risk-based capital rules.



Source: American Banker

S&Ls Were Sellers

Thrifts, meanwhile, were net sellers, reflecting asset reduction spawned by that industry's bailout law. The top 100 thrifts in mortgage-backeds reduced their holdings by about 6% in the 12 months ended Sept. 30.

Tables of the top 100 banks and the top 100 thrifts in mortgage-backed securities holdings begin on page 12. The tables deal only with basic mortgage-backed-securities, which pass through to investors both the interest and principal payments from pools of mortgages. Derivative instruments, such as collateralized mortgage obligations, are not included.

While the top 100 banks boosted their holdings by 52%, to $73.5 billion, the banking industry as a whole increased its investments by 39%, the study of recent regulatory filings found.

The sharp jump in banks' holdings of mortgage-backeds comes as the industry is making heavy inroads into other parts of the home loan arena. Last summer, for example, commercial banks supplanted savings and loan associations as the nation's largest originators of mortgages.

Mortgages Make Sense

"Everything we know says banks ought to be doing this," says Lawrence J. White, an economics professor at New York University's business school and a former member of the Federal Home Loan Bank Board. Specifically, he cites the risk-based capital regulations, which require banks to hold less capital against mortgages and

PEOPLE *in the news...*

Gibson Quits as Chairman Of American Federal Bank

William Gibson resigned abruptly last week as chairman and chief executive of the embattled **American Federal** Bank, Dallas, one of 16 thrifts created under the "Southwest plan" in 1988.

The sudden departure marks another unusual twist in the career of Mr. Gibson, an executive so ambitious that he once turned down a position on the Federal Reserve Board because he was not offered the chairmanship.

American Federal offered no explanation for why Mr. Gibson left, and the executive could not be reached for comment. However, industry sources cite deteriorating relations with regulators and the thrift's owner, **Lone Star Technologies** Inc.

A Flair for Publicity

He came to the helm of American Federal, formed from the remains of 12 failed Texas institutions, in August 1988. Almost immediately after taking control, Mr. Gibson began promoting American Federal as an example of how a reconstituted thrift should be operated. He hired a public relations company to promote his name and gave interviews.

But Mr. Gibson faded from view last fall, after the thrift-reform law threw his thrift on the ropes. Counting on the Federal Home Loan Bank of Dallas for up to 50% of American Federal's funding, Mr. Gibson had to devise plans to repay a portion of the funds, making the thrift vulnerable to increases in interest rates it must pay to attract additional deposits.

And capital guidelines spelled out in the law derailed Mr. Gibson's plans for growth and acquisitions. At Sept. 30, American Federal was $30 million short of the core capital it required to carry its assets.

Mr. Gibson formerly was the chief economist for RepublicBank Corp., Dallas, predecessor of the failed First RepublicBank Corp. After leaving Republic in 1986, he took charge of asset and liability management at Continental Illinois Corp.

Citicorp Replaces Quotron Chief

Citicorp has reorganized its faltering Quotron subsidiary, naming Leland H. Amaya to replace J. David Hann as chairman and chief executive officer. The bank company also appointed Paul F. Glaser, head of its technology operations, as president and chief operating officer.

In the fourth quarter, Citicorp wrote off $35 million relating to severance pay and equipment writeoffs at Quotron, which it purchased for $680 million in June 1986.

Mr. Hann, a former executive with **U.S. Spring Communications** Co., took the reins of Quotron at the end of 1987, replacing the company's founder.

Mr. Amaya, a member of Quotron's board since 1984, is a veteran of the securities industry. He served as vice chairman and head of operations at Paine Webber Jackson & Curtis and is a former chairman of Securities Industry Automation Corp.

A Technology Background

He began his career as a systems and computer specialist for the Pan Am Corp. and Lockheed Missiles & Space Co.

Mr. Glaser has been chairman of Citicorp's corporate technology committee since 1982. According to a news release, Mr. Glaser was instrumental in designing and implementing Citibank's automated teller machine network. He joined the bank company in 1973 after 15 years at TRW Inc.

Quotron, at one time the standard Wall Street source for stock market quotations, has faced increasing competition from other vendors in recent years. Citicorp says it will continue to develop new products for the unit.

First National Bank in Palm Beach, a division of Southeast Bank, Miami, appointed **John H. Coleman Jr.** vice president of investment services of Palm Beach Capital Services, the bank's investment subsidiary. ☐

Planned Challenge on CRA May Slow C&S-Sovran Deal

By KENNETH CLINE

ATLANTA — In a move that could delay Citizens and Southern Corp.'s $2.2 billion merger with Sovran Financial Corp., a group of community activists was expected today to file a challenge to Citizens' community reinvestment record.

Dennis Goldstein, housing specialist attorney with the Atlanta Legal Aid Society, said he plans to file a CRA challenge today against Citizens on behalf of a client, Carrie Copeland, president of an Atlanta-area tenant's association.

Mr. Goldstein said he would argue that Citizens had a poor record in terms of consumer, business, and mortgage lending to low-income people in Atlanta.

Under the Community Reinvestment Act of 1977, activist groups have the right to challenge bank mergers and acquisitions if they can present documented complaints that the banks involved are not doing enough to meet the credit needs of low-income and minority customers.

Dialogue Will Continue

"We told [Citizens] we planned to file, they acknowledged that, and both sides agreed that we would continue the dialogue on CRA issues," Mr. Goldstein said.

Atlanta Legal Aid is one of three groups that has been engaged in negotiations with Citizens during the past month, according to Mr. Goldstein. He identified the others as the Georgia Housing Coalition and the Southern Christian Leadership Conference.

Representatives of those groups could not be contacted Friday, but both had previously made known their interest in CRA-related issues.

Citizens spokesman Scott Scredon said the Atlanta-based bank still anticipates completing its merger with Norfolk, Va.-based Sovran as planned by April 30.

Ample Time for Review

"The Fed's 60-day review process allows ample time for issues such as this," he said, referring to the period the Fed allocates for reviewing CRA challenges.

"We feel we have a well-documented file that will make it easy for the Fed to see that we have fulfilled our responsibilities," Mr. Scredon added.

Under Federal Reserve rules, today is the deadline for such groups to file a CRA challenge against the Citizens-Sovran merger. Mr. Goldstein suggested his client would not be the only one to file. "Based on earlier conversations, I believe that there are going to be a number of community groups in Atlanta filing separate challenges," Mr. Goldstein said.

The Fed began taking a harder stance on CRA complaints last year. In February, it denied an application by Continental Bank Corp., Chicago, to purchase Grand Canyon State Bank in Scottsdale, Arizona.

Most recently, it delayed for several months the acquisition of Florida National Banks of Florida Inc., Jacksonville, by First Union Corp., Charlotte. That acquisition also faced CRA challenges from community groups.

The Fed finally approved the deal at the end of December. By then, First Union had announced some expensive low-income lending commitments to bolster its CRA record: $9 million to neighborhoods in Charlotte, and $28 million to communities it serves in Florida. ☐

Unclear Future Of OTS Stalls Director Hunt

By BARBARA A. REHM

WASHINGTON — The Bush administration has identified some suitable replacements for M. Danny Wall, the caretaker Office of Thrift Supervision director, but is having a hard time persuading anyone to take the job.

"The desire is there, but delivering on it is tough," said an administration source. "Talk of merging the agencies makes it harder to find someone."

A new spate of rumors has the OTS being merged into the Comptroller of the Currency's office. That has created uncertainty about whether there really is an OTS job to take. (See story on page 17.)

Wall Is Ready

For his part, Mr. Wall appears ready to go. He announced late last year that he was resigning but would stay on until a successor was named.

Karl Hoyle, OTS spokesman, said of Mr. Wall last week: "He's made the transition mentally.

See **BANKING** *page* **15**

Correction

A Jan. 19 article (page 14) incorrectly described the capital position of Crossland Savings Bank, Brooklyn, N.Y. It reported stockholders' equity of $647 million at yearend. Because the figure includes about $380 million of cumulative preferred stock, which is not eligible to be treated as capital under guidelines of the Office of Thrift Supervision, the thrift falls short of current capital minimums. Crossland has filed a plan with the OTS to comply with the capital rules. ☐

COMMENT / *By Paul S. Nadler*

Encouraging Local Support For a Mutual Savings Bank

"I agree with you," said the astute president of a mutual savings bank. "There are a lot of pitfalls in switching from mutual status to stockholder ownership – but how else can we get the community to share in our success and thus give the bank more of its business?"

Theoretically, everyone benefits when a mutual sells stock – its depositors, employees, and the community. But the real winners when a thrift goes public are often the investment bankers and lawyers who facilitate the process.

All too often, the shares have traded "under water" – at prices well below the offering price. That angers the depositors who withdrew interest-earning savings to buy the stock, discourages employees who bought stock, and makes the bank look bad in the community's eyes.

Worse still, by going public the bank is put "in play." Others may want to buy it and replace the management, especially if the stock is cheap, once the mutual gives up its protection from a buyout.

This sobering scenario causes many executives of mutual organizations to spurn the blandishments of investment bankers who advise them to go public. They resist, even though the investment banker never fails to mention, "and of course you, yourself, will reap some personal benefits, too."

But the major drawback of remaining a mutual is the one cited by my banker friend: A stock company has local owners who want the bank to thrive because they share the profits. Mutual institutions lack this.

The president of an Arkansas bank once wrote to me, trying to buy back the stock in his bank that my father had bought for my daughter in the 1960s. His letter argued that having the stock held by a New Yorker did the bank no good, so he wanted it back to sell to a local citizen.

I refused to sell. This bank was acute enough to want to keep its stock locally owned – and willing to make the effort to bring back stock held outside the community. That was the type of bank I wanted my daughter to have an investment in.

My banker friend and I mused about what can be done to remain mutual but give incentives to interest the community in helping the bank to prosper.

We came up with the Schmidlap plan, named after the mythical bank I use in my talks. (I do this so that no real banker can say I am talking about his operation – even if I am.)

1. A Schmidlap plan account pays a base interest rate on deposits, along with a premium return based on the bank's earnings and the number of points the depositor has earned for activities that helped the bank achieve its profits.

2. Points will be earned (as in an airline frequent-flier club) for the following:

- Keeping the number of transactions in the Schmidlap account to a specified minimum, to save the bank the cost of excessive activity.
- Bringing in new business, either a new loan or a depositor whose account is substantial and stays on the books a specified amount of time.
- Making a suggestion that helps the bank.

My friend's mutual institution adopted a helpful idea that would have earned points under our plan. A bulletin board in his mortgage department displays a welcome message and lists the names of the people who will be coming in to close or originate mortgages that day!

- At the end of each quarter the bank will report its earnings and then announce how much each point on the Schmidlap program is worth in added interest above the stated minimum.

Incentive for Depositors

Is this legal? I would think so, although I am sure any bank that wants to use the Schmidlap plan (it is not copyrighted) should check with counsel. After all, Chase Manhattan Bank has promoted a savings account with interest tied to the Standard and Poor's 500 stock index. So why shouldn't an account be tied to the bank's own earnings?

The key is to make the community feel a direct relationship between the bank's success and its own rewards.

This concept works for a stockholder-owned bank. If a mutual can attain the same goal and still retain its mutual format, it will have gone a long way toward having its cake and eating it too – in these days when giving up mutuality has so many pitfalls. ☐

Mr. Nadler is a contributing editor and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

Last week's Chapter 11 filing by Campeau Corp.'s retail stores sent a warning to lenders about the growing threat posed by highly leveraged credits that populate many commercial lending portfolios. Suzanne Christy of the American Banker's feature staff asked:

Q ***Do you expect to see more bankruptcies? Will the situation get worse before it gets better?***

■ Christopher Mahoney
Vice president, financial institutions
Moody's Investors Service

The Campeau failure is a sure signal that bankers should reexamine their portfolios. There will be even more bankruptcies, especially on deals based on asset sales and cash flow.

People are overleveraged. Cash flow coverage is tight to begin with. LBOs will get tougher and tougher to work out – out of court. If debt can't be serviced, it will have to be dealt with in court.

And there will be more problems than we are seeing now. There has been a deterioration in the quality of leveraged deals. Leveraged transactions done early in the decade were better than those that followed. Most of the troubled ones are the more recent deals.

On the other hand, I don't think LBOs will be a crisis for many, though they might be an embarrassment and headache. This is not a situation anywhere close to the Texas real estate or LDC problems that killed off a few players.

Bankers should beware of any deal based on asset sales and not cash flow.

■ Carolyn Day O'Leary
Vice president,
Senior credit administrator
First American Bankshares

Bankruptcies are on the rise. We can look for more problems with highly leveraged transactions for many of the same reasons the Campeau deals went bad: Buyers were paying too much for businesses. With such thin capital bases, there is absolutely no room for any interruptions in the economy or a company's progress without there being a severe impact on the borrower's ability to pay when debt is due.

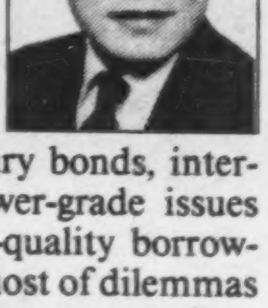
We have been assessing our portfolio, and we already have policies discouraging highly leveraged loans. That's not to say we don't have some on our books, but they are decided on a case-by-case basis. And with the recent joint definition issued by federal regulators, we are fine-tuning our policy again, specifying what kind of underwriting criteria we expect.

We are no longer concerned about what would happen if interest rates rise. Now we are more concerned about the short-term outlook for real estate. There will not be terribly grave problems, but we expect a definite softening in the marketplace.

The time for conservatism is here.

■ Sung Won Sohn
Senior vice president, chief economist
Norwest Corp.

It is pretty clear there will be more bankruptcies, especially if the economy slows down or we go into a recession.



Credit quality should be the No. 1 concern of bankers.

While interest rates are going down on high-quality issues like Treasury bonds, interest rates on lower-grade issues are rising. Low-quality borrowers are facing a host of dilemmas – if they can get money at all.

We are already seeing some credit rationing – the first time since the mid-1970s. Commercial real estate is one area, the junk bond market is another. Problems will even extend into the home mortgage area as savings and loans struggle with the new capital rules. Even some venerable institutions like Manny Hanny and Chemical have had their subordinated debt rated as junk because of credit-quality problems.

■ Herman Sandler
Founding principal
Sandler O'Neill & Partners

The bankruptcy of Campeau's subsidiaries is a classic example of what happens when expectations and reality are so far afield. Ego and fees were driving that deal instead of logical business sense. Wall Street took some of the best corporations around and put them in debt for no reason other than they wanted the fees. Even now, as more and more deals are bound to turn sour, the Street benefits – this time from the recapitalization fees.

Banks are at a very dangerous point right now. Most types of loans, including consumer loans, are shaky. The problem real estate loans in the Northeast will soon be reflected in the commercial area. We'll see the worst defaults in Massachusetts, where there are numerous uncompleted projects.

Capital is now king, and it is becoming even more so as the Fed and regulators take an active role.

Banks should raise premiums, and build as big a financial cushion as they can. If anything, they should err on the conservative side, and add another 10% to 15% to reserves.

In the future, thinly capitalized deals will be difficult to get done. ☐

AMERICAN BANKER

Data source: ADP Data Services Division, New York, from its data base of federally insured commercial banks. ADP restates the 1988 data for 1989 mergers. **Mortgage-Backed Securities** are the book value of all of bank's holdings of U.S. government and private certificates of participation in pools of residential mortgages. Mortgage securities held in a bank's trading accounts are excluded. **Government Mortgage-Backed Securities** are the book value of all holdings of certificates of participation in pools of residential mortgages that are U.S. government-issued or -guaranteed. Included are certificates of participation in pools of residential mortgages issued or guaranteed by the Government National Mortgage Association (GNMA), the Federal National Mortgage Association (FNMA), and the Federal Home Loan Mortgage Corp. (FHLMC). **Private Mortgage-Backed Securities** are the book value of all holdings of certificates of participation in pools of residential mortgages that are issued by others (e.g. other depository institutions or insurance companies) that are not guaranteed by the U.S. government. **Government MBS as % of All MBS** is the ratio of government mortgage-backed securities to total mortgage-backed securities (government plus private). **Total assets** are total assets of the bank, including domestic and foreign offices. **Total Securities** are the book value of securities of all types held as assets by the bank. **MBS/Assets** is the ratio of total mortgage-backed securities to total assets. **MBS/Securities** is the ratio of total mortgage-backed securities to total securities. **Securities/Assets** is the ratio of total securities to total assets. All ratios are expressed as a percent. **(a)**—Merged into Bank of New York in Oct. 1989.

Capital Rules Prompt Commercial Banks to Boost Mortgage Securities

Continued from *page* **1**

mortgage-backed securities than against many other investments.

Securities of the Government National Mortgage Association carry the biggest advantage. They have the same risk weighting as Treasury securities – essentially zero – but provide higher yields.

"Banks have bought a tremendous amount of Ginnie Maes," says Michael Mortara, a partner at Goldman, Sachs & Co.

Lower Demand for Other Loans

Risk-based capital rules are only part of the story, however. Declining demand for business and consumer loans, and increased skittishness about commercial real estate lending, left many banks searching for sensible assets last year, bankers and analysts say. And mortgage-backed securities became available at attractive prices, reflecting fears of heavy selling by distressed thrifts.

Chemical Bank, the No. 2 bank in mortgage-backed securities after Bank of America, began a major Ginnie Mae buying effort in the summer and fall, when market jitters about sales by thrifts was at a peak, according to officials at the bank.

"We thought the anxiety was somewhat misplaced," said Patti Colburn, a Chemical vice president.

Market Remained Orderly

Although thrifts were net sellers – the industry as a whole reduced its holdings of mortgage-backeds by nearly 10% in the 12 months through September – the selling was far more orderly than feared. Banks, insurance companies, and other investors proved to be strong buyers, supporting prices.

Yield spreads of benchmark Ginnie Maes over Treasuries, a central measure of market performance, widened from 120 basis points at the start of the year to as high as 160 basis points in August, but then declined steadily. Last week, the spread was about 130, according to Merrill Lynch Mortgage Capital.

NCNB Jumps In

Three units of NCNB Corp., Charlotte, N.C., all plunged into the market-backed securities market last year. Starting with small portfolios, the three increased their holdings to the point where each ranked in the top 15 by Sept. 30.

But special circumstances were responsible for this. Because of tax credits NCNB obtained in taking over the troubled First Republic Bank of Texas, the corporation no longer needed its holdings of tax-exempt municipal bonds, a spokeswoman said. As a result, the three banks sold munis and bought mortgage-backeds, drawn to the higher yields relative to Treasuries.

Signet Bank, Richmond, has been boosting its holdings of mortgage-backed securities for the past couple of years. "Our loan growth, especially in the real estate area, has slowed down, so we have more room on the balance sheet," says chief financial officer Wallace B. Millner 3d.

Balancing the Balance Sheet

In addition, he says, Signet uses the securities to cope with an "asset sensitive" balance sheet. That condition, common among regional banks, involves a tendency of assets to reprice before liabilities, hurting income when market rates fall.

Fixed-rate mortgage-backed securities help protect the bank from falling market rates, he says. While Treasuries might do the same, Mr. Millner likes the yield advantage of mortgage-backeds and says he is willing to accept the special risks of the securities: that borrowers will pay off their mortgages early and disrupt cash flows to investors.

Banks Boost Production

While Signet and many other banks buy their mortgage-backeds from dealers, banks are expected to create more and more of the securities from their own originations. Scores of banks across the country have been boosting their originations, often as part of broad pushes into consumer banking. In September, banks accounted for 40% of all mortgage originations, up from 24% a year earlier, according to the most recent government statistics.

Ameritrust Co., Cleveland, sharply increased its holdings of mortgage-backeds last year by converting mortgages on its balance sheet into securities. Both the Federal National Mortgage Association and the Federal Home Loan Mortgage Corp. have programs allowing lenders to swap their loans for securities backed by the loans.

Such securitization leaves a bank with a more liquid asset and one that can be used as collateral for borrowings, notes Ron Koza, an Ameritrust portfolio manager. "Risk-based capital was another consideration," he says

Under those rules, to be fully phased in by 1992, such assets as corporate bonds and syndicated loans have risk weightings of 100%, but home mortgages are at 50%.

Even more favorable are the securities of Fannie Mae and Freddie Mac, both of which have 20% weightings. Ginnie Maes, which carry full government guarantees, are in a zero-risk class with Treasuries.

Thrifts Shrink Portfolios

Meanwhile, as banks have been posting gains in mortgage-backed securities holdings, thrifts have been steadily posting declines.

"Thrifts generally spent the latter part of 1989 in a shrinking mode" to meet the core and tangible capital requirements of the bailout law, says Fred Price, a principal in the investment banking firm of Sandler, O'Neill & Partners. "When you need to reduce assets, you first go the most liquid assets, which usually are mortgage-backed securities." ☐

Banks Question Marching Orders In Drug Battle

By ROBERT M. GARSSON

WASHINGTON — As former chief of the Justice Department's narcotics division, Charles W. Blau knows how important bank transaction records can be in making a drug case. But Mr. Blau has come to believe that the government, in its zeal to wage war on drugs, is asking too much of the banking industry.

"Banks are participating more as law enforcement agents of the government and less as protectors of customers' rights to privacy," said Mr. Blau, a lawyer with Dallas-based Davis, Meadows, Owens, Collier & Zachry. "I think it's a great problem."

ANALYSIS
Follow-up on the news

Many in the banking industry agree. Drafted as foot soldiers in the government's war on drugs, bankers are grumbling more and more about the generals' battle plan.

While the industry has come to agree that it should play a role in combatting the laundering of drug funds, it is increasingly concerned about the costs and liabilities incurred. And bankers are wondering whether the government is collecting the right information and using it effectively.

Facing a Dilemma

One major problem, bankers said, is dealing with suspicious transactions. Banks are obligated to report such transactions to the authorities. Having done so, however, they face a dilemma. If they cease doing business with the customer, they can be sued. In 1982, Key Bancshares of Maine Inc.'s bank subsidiary cut off a credit line to two men after agents from the Federal Bureau of Investigation told them – erroneously, it turned out – that one of the two was linked to organized crime. A jury awarded the two $15 million in a 1987 decision.

But the bank may have an even bigger problem if it continues the relationship and the customer turns out to be trafficking in illegal drugs. The U.S. Code, amended by the Money Laundering Control Act of 1986, makes it a crime for a financial institution to engage in transactions involving "criminally derived property."

By filing a suspicious-transaction report, the bank has gone on record as having some knowledge of the possibility of illegal activity, and "mere knowledge of the illegal source of the funds" establishes a violation of the law, said John Villa, a lawyer

Banks Make New Drive Into Commercial Paper

By DAVID NEUSTADT

NEW YORK — After years of losing top loan customers to the commercial paper market, many big banks are breaking into the ranks of major dealers there.

Last year, the six most active banks in the $529 billion market for short-term corporate securities boosted their number of programs 26% to 503, and the volume of paper outstanding 77% to $53 billion, according to an informal survey by the *American Banker.*

Wall Street's Tight Hold

Despite their gains, commercial banks still stand well behind investment banks. Merrill Lynch & Co., with 718 programs and $82 billion in paper outstanding, has more business than the top six commercial banks combined.

While a few investment banks still dominate the market, some major players, such as Salomon Brothers Inc., have dropped out. Profit pressures may force other investment banks to cut back their activities in commercial paper distribution, a business with a notoriously thin margin. That could create more opportunities for the commercial banks, which claim to have lower operating costs than their Wall Street competitors.

Short-Term Needs Vary

Commercial paper is sold through what is called a program, because companies use the security for short-term needs, which vary through the year. Some companies have several programs for different needs or subsidiaries.

About 40% of commercial paper is sold directly by companies. The rest, about $313 billion, is placed through dealers.

U.S. Issues Tough Rules For Licensing Appraisers

By BARBARA A. REHM

WASHINGTON — Moving to curb inflated housing appraisals that contributed to the savings and loan debacle, federal regulators have announced strict guidelines for the licensing of real estate appraisers.

The guidelines, required by the thrift-bailout law passed last August, force states to set up licensing agencies that cannot be controlled by the real estate or appraisal industries.

The nation's 250,000 appraisers have until mid-1991 to get state approval. Only about a dozen states currently require a real estate license or any other qualification.

Rules 'Unrealistic'

State real estate regulators, realtors, and appraisers complained that the guidelines were unrealistic.

"I think they are being too rigid," said Wallace Collins, the administrator of the Texas Real Estate Commission, a regulatory body. Keeping the real estate and appraiser industries out of the approval process is "totally unnecessary," he said.

"What we are upset about is the inability for appraisers to have a majority on the [state-licensing] boards, but we're hope-

Analysts See Possible Crisis At Boston Bank

By KELLEY HOLLAND

If the beleaguered Bank of New England falls short of its plan to dispose of assets, it will face a funding crisis, analysts said Monday.

Money market traders report that secondary market activity for the roughly $5 billion of institutional-size certificates of deposit outstanding has virtually ceased, and at least one bank stock analyst believes insolvency due to a liquidity crunch may be just two to four weeks away.

CD Market Has Dried Up

"The market for Bank of New England CDs has totally dried up over the last few days," said one jumbo CD trader. "I've seen some people looking for bids here," said another, but "there hasn't been a secondary market trade in a Bank of New England CD for some time."

Big California Thrifts Buck Trend, Gain Deposits in 'Flight to Quality'

By ELLEN MEMMELAAR

NEW YORK — While the overall thrift industry lost deposits at a record rate last year, a few healthy thrifts managed to attract substantial new funds in what executives and analysts call a flight to quality.

The two biggest deposit gainers among the largest thrifts last year were Home Savings of America and Great Western Bank, which rank No. 1 and No. 2 nationally in deposits and assets.

Billion-Dollar Gains

Home Savings, principal subsidiary of H.F. Ahmanson & Co., Los Angeles, increased total deposits by $3.6 billion, or 12%, to $33.1 billion as of Dec. 31. Great Western, based in Beverly Hills, Calif., gained $1.6 billion, or 7%, to $23.8 billion. (Along with their balance-sheet totals, Ahmanson and Great Western reported 1989 earnings Monday. See page 2.)

Deposit inflows at the two

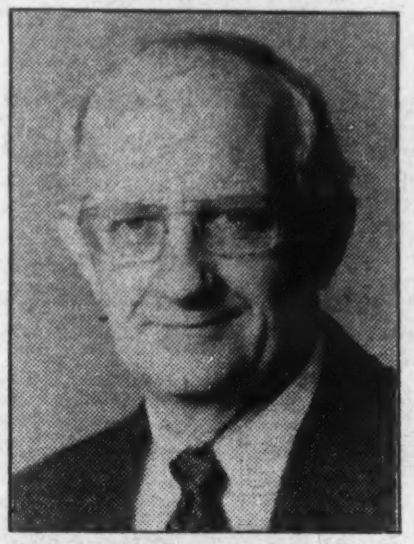
Mangels to Give Up Reins At Security Pacific Unit

Just days after **Security Pacific** Corp. announced a realignment at the top level, its Seattle-based subsidiary did the same.

John D. Mangels, 64, said he plans to retire April 30 after more than 40 years with Security Pacific Bancorporation Northwest and its predecessor, Rainier Bancorp. Succession will be orderly, as is customary at Security Pacific: John C. Getzelman, president and chief operating officer, will become chairman and chief executive of the $10.2 billion-asset company May 1, the day after Mr. Mangels retires.



John D. Mangels

Last Tuesday, Richard J. Flamson 3d said he would step down as chief executive officer of Security Pacific, but remain chairman.

Mr. Mangels, a Pacific Northwest native who was born in nearby Victoria, British Columbia, has been CEO for 2½ years. He succeeded G. Robert Truex Jr., the man generally credited with molding Rainier into a regional powerhouse. Mr. Mangels will remain chairman of the board's executive committee.

Mr. Mangels is regarded as "a real gentleman" by bank analyst Jay Tejera of **Dain Bosworth** & Co. in Seattle. "They're not making gentlemen like that any more," Mr. Tejera said. "You have to find someone his age. He epitomizes the old Rainier's relationship banking style."

Mr. Mangels said in an interview that he expects to spend time in retirement working with outside boards, especially on creating a stronger link between businesses and local schools. He also plans to travel, do some fly fishing, and "take five strokes off my golf game."

Observers say he was something of a transitional figure between Mr. Truex and the new regime at Security Pacific. Mr. Truex spearheaded the merger with Security Pacific, which was completed in August 1987, and retired that same year. He died in 1988, having suffered from emphysema for many years.

Mr. Mangel's long years in the community have built a rapport that Security Pacific wants very much to keep, Mr. Getzelman said in an interview.

"He grew up with this bank. He really is an institution," said Mr. Getzelman, 46, who became president of Security Pacific Northwest in 1988 after a career spent mostly overseas. He was executive vice president and head of Security Pacific's international division before moving to Seattle.

"One thing you're concerned about in a merger situation is that the identity with the community is lost, or the feeling that it may be lost," he added. "You take his 40 years and appreciate that he'll maintain an active role for us. And you convey to the Northwest that Security Pacific has ingrained its efforts into the area."

— Jeffrey Marshall

... by region

NEW ENGLAND

Centerbank, Waterbury, Conn., named **Robert J. Narkis,** a bank director, chairman and acting chief executive.

Federal Reserve Bank of Boston elected **Terrence Murray** to a three-year term as a Class A director. Mr. Murray is chairman, president, and chief executive of **Fleet/Norstar Financial Group** and chairman of Fleet National Bank, Providence, R.I.

Burritt Interfinancial Bancorp, New Britain, Conn., appointed **Joseph J. Cisz** vice president.

Northeast Savings, Hartford, Conn., elected **Kathreen M. Campbell** senior vice president of facilities and administration.

MIDDLE ATLANTIC

Chase Manhattan Corp. appointed 10 senior vice presidents. They are **Peter John Anderson,** Banco Chase Manhattan (Brazil); **Richard H. Evans,** international individual banking; **Robert R. Field,** worldwide insurance; **Richard P. Kotz,** national financial services; **Richard Mounce,** Chase Manhattan Bank (Korea); **Joseph M. Scharfenberger,** automotive financial services; **Richard Schrumpf,** North America corporate finance; **Diane Shaib,** direct response; and **Robert W. Shippee,** Europe corporate finance.

MIDWEST

Mercantile Bank of Kansas City, Mo., a subsidiary of **Mercantile Bancorp,** St. Louis, elected **David A. Dierks** executive vice president. He also will serve as manager of the metropolitan division. **Dennis J. Hudson** and **Gregg H. Thomas** were elected vice presidents.

WEST

Mechanics National Bank, Paramount, Calif., appointed **John P. Ryan** senior vice president and comanager of its real estate division.

County Bank, Santa Barbara, Calif., elected four vice presidents: **A. Mario Antignani,** collection and foreclosure manager for loan services; **Douglas H. Green,** loan service manager; **Richard J. Lowson,** consumer loan administrator; and **Kimberly Smith,** data systems manager.

1st Interstate Loss Tops $340 Million

Fourth-Quarter Results Worse than Analysts Expected

By SAM ZUCKERMAN

SAN FRANCISCO — Battered by sour real estate loans in Arizona and Texas, First Interstate Bancorp reported a fourth-quarter loss of $344.3 million, higher than analysts' expectations.

The loss added a bitter note to last week's announcement of the resignation of chairman and chief executive officer Joseph J. Pinola and his replacement by president Edward M. Carson, which will take effect June 1. It compared with fourth-quarter earnings of $144 million in 1988.

The company took a loss for the full year of $124.5 million, compared with 1988 earnings of $129.4 million.

Loss Higher Than Predicted

Negative results were expected following December provisions of $300 million for losses at the Texas subsidiary and $100 million for potential real estate losses in other locations. But the net loss for the quarter was higher than predicted.

Analysts said a key reason was a sharp rise in expenses at other real estate owned, mainly foreclosed properties. Other real estate-related costs, principally in Texas and Arizona operations, were $133.7 million for the quarter, compared with an $8.4 million gain for the year-earlier period.

On the balance sheet, other real estate owned nearly doubled to $907 million at the end of 1989 from $497 million a year earlier. "The number just went way up. They are sitting on a lot of stuff," said Dan B. Williams, analyst with Sutro & Co., San Francisco. The company seems to prefer to hold foreclosed real estate rather than sell in depressed markets, he said.

Another factor driving up the loss was a 13% drop in taxable-equivalent net interest income to $594.8 million, a performance substantially worse than First Interstate's California-based rivals.

Construction Loans Up

Real estate construction loans were up $368 million, or 9.4%, from the fourth quarter of 1988, with growth centered in California. The company said 77% of its $2.111 billion in nonperforming assets are real estate-related.

Despite the loss for the year, First Interstate said its capital position had improved marginally. Stockholders' equity amounted to $2.3 billion or 3.96% of assets, up from 3.85% the year before. ☐

Ahmanson Holds to Small Drop, Becoming No. 1 Thrift in Profits

By YVETTE D. KANTROW

NEW YORK — H.F. Ahmanson & Co., parent of the nation's largest thrift, reported a 3% earnings decline for the fourth quarter, but the company earned enough in the year to surpass Great Western Financial Corp. as the biggest profit maker among U.S. savings institutions.

Great Western, the No. 2 thrift in assets, outearned all other thrifts in 1988.

Los Angeles-based Ahmanson, which owns Home Savings of America and New York's Bowery Savings Bank, earned $65.9 million, or 66 cents a share, in the fourth quarter, down from $67.8 million, or 68 cents per share, in the fourth-quarter of 1988.

The thrift company attributed the decline to an increase in its effective tax rate for the quarter to 39.6% from 30.3%.

Great Western reported a fourth-quarter loss of $77.3 million, or 59 cents a share, causing earnings for the year to fall 60%

COMMENT/*By Sanford Rose*

Tracking Bank Deposit Costs

Interest expenses as a percent of domestic bank deposits rose nearly 100 basis points from the third quarter of 1988 to the second quarter of 1989, before easing off slightly in the third quarter, according to data just released by the IDC Financial Corp. of Hartland, Wis.

Although interest rates had peaked earlier in the year, the cost of bank deposits rose 53 basis points in the second quarter of 1989 alone, greatly aggravating net-interest-margin headaches.

This outsize rise in bank deposit costs in part reflected a shortfall in total checkable deposits. From mid-December '88 to mid-June '89, the checkable deposits at depository institutions – both zero-cost demand deposits and low-cost NOWs – fell at a compound annual rate of 8.2%.

As their hoard of no-cost or low-cost money began contracting, banks were forced to refinance existing assets with more expensive deposits and borrowings.

Additionally, during 1989 many banks had to respond to the competition from money market mutual funds by raising their deposit rates. So not only did banks have to shift from noninterest-bearing to interest-bearing funds, but they also had to pay more for that interest-bearing money.

To make matters still worse, the opportunities to place the more expensive net new deposit inflows in high yielding, rate-insensitive consumer loans diminished – at least in many, though by no means all, regions of the country. So a number of banks had to funnel their costlier new money into rate-sensitive commercial loans, whose yields were coming down and are likely to fall further over the near term.

(Some margin relief was obtained in the fourth quarter, but it would appear that margins are once again under pressure in this quarter.)

The average bank in the United States paid 7.42% per dollar of domestic deposits in the third quarter of 1989, 96 basis points more than the rate paid in the third quarter of 1988.

Over-billion-dollar banks paid 7.51% in the third quarter of last year, a full 100 basis points more than was paid in the comparable quarter of 1988.

Cheaper in the West

Bank deposit costs vary widely by geographic area. Average costs are appreciably lower in the Far West than in the Midwest or in the East. Banks in states like California, Nevada, Arizona, Washington, Oregon, and Wyoming raise money whose average cost runs anywhere from 87% to 93% of the national norm.

The lower deposit costs of some western states may result from an above-average store of those interest-free demand balances. Demand deposits come from essentially two sources: small businesses that do not find it cost effective to monitor the level of their free balances and retail depositors who don't have balances large enough to be placed in NOW accounts. So if a state has an unusually large population of small businesses – e.g., California – its banks will generally pay less than the national average for deposit money.

> 'The trend in interest costs as a percent of deposits may serve as a sort of leading indicator of banking problems.'

Additionally, the higher the degree of bank concentration – as measured, albeit imperfectly, by the share of statewide deposits held by the four largest banks – the greater is the ability to hold down the cost of interest-bearing deposits. To some degree at least, the relatively low deposit costs of banks in Nevada, Washington, Oregon, and California as well, stem from the fact that banking in these states is far more concentrated than it is in other parts of the country.

Foreshadowing Problems

The trend in interest costs as a percent of deposits may serve as a sort of leading indicator of banking problems. Thus, a few years ago, the banks in Connecticut and Massachusetts had costs that just about matched the national average. But as the real estate boom escalated, so did average deposit costs.

By the end of 1987, Connecticut banks were paying an interest premium of 5% over the national average, while the Massachusetts banks were paying a whopping 10% premium. Apparently, the chance to make high-yielding real estate loans mightily encouraged banks in both states to pay up for money.

Escalating deposit costs also foreshadowed problems in Arizona. On average, banks in this state pay less than the national norm. But the smaller banks pay appreciably more. Once low-cost funders, these smaller institutions, like the banks in Connecticut and Massachusetts, began paying large premiums in 1987.

Recovering Oil Patch

By the same token, the decline in interest cost premia often signals the resolution of problems. Beginning in 1987, the interest costs of the Texas banks and of the larger Oklahoma institutions began soaring.

By the third quarter of 1987, the Texas banks, which had been accustomed to raising money at less than the national average, were compelled to pay a 4% premium. The larger Oklahoma banks also had to raise the deposit ante. By the middle of last year, however, deposit premiums had fallen measurably in both states.

As of the third quarter of 1989, the state with highest average deposit costs was Delaware, where interest costs as a percent of deposits amounted to 8.34%. This is a state dominated by credit card banks, which earn richly and therefore can afford to pay up for deposits, most of which are not of the "core" variety.

The state with the lowest deposit expense was Wyoming. The average bank in this state paid a mere 6.63 cents per dollar of deposit funds. □

CRIME BLOTTER/*By Tom Leander*

High Court to Review Thief's Debt to Bank

The Supreme Court has decided to hear an appeal in a credit card fraud case that has spurred a legal dispute over the breadth of the Federal Victim and Witness Protection Act, established to help victims recover their losses.

The dispute is between Frasiel L. Hughey, a former post office worker who pleaded guilty to one count of credit card fraud in 1987, and federal prosecutors over how much he should repay the Texas bank that he bilked.

Mr. Hughey pleaded guilty to using only one stolen MBank U.S.A. credit card and argued that he should repay only the $10,422 that he spent using that card. But prosecutors said they had evidence that Mr. Hughey had used 21 stolen cards and had bilked MBank of $147,646. They warned the defendant that he would be ordered to repay the full amount.

During sentencing, however, a federal judge assessed a restitution amount of $90,412, striking a compromise between the two positions. Mr. Hughey was also sentenced to eight years in prison.

Mr. Hughey fought the judge's decision in the U.S. Court of Appeals for the Fifth Circuit, which upheld the lower-court decision last July.

The court held that one of the principal purposes of the Victim and Witness Protection Act "was to ensure that wrongdoers, to the degree possible, make their victims whole. If restitution were limited to the count of the conviction, given the high levels of plea bargaining within our criminal system, in the majority of cases, a victim could not be made whole."

In response to the latest appeal, the U.S. Solicitor General has sent a brief to the high court, arguing that a reversal of the Fifth Circuit ruling would violate Congress's intent to compensate crime victims adequately.

Janitors Caught Trying To Clean Cash Drawer

Police nabbed four janitors on Jan. 13 for allegedly stealing $400 in cash from a Wells Fargo Bank branch in Garden Grove, Calif.

The maintenance crew allegedly pried open a teller's cash drawer during the morning cleanup and removed the cash. Police, alerted by a silent alarm in the drawer, rushed to the branch and discovered the cash stashed in the personal belongings of one of the suspects.

The janitors, three of whom are employed by the Peerless Building Maintenance Co. of North Hollywood, are being held on suspicion of grand theft.

This is the second time in as many months that a janitorial crew in the area was suspected of stealing money from a bank while cleaning it up, police said.

In early December, police were alerted by an alarm to a burglary at the Golden West Cities Federal Credit Union in Los Angeles. Eyewitness descriptions led to the arrests of a maintenance crew a few minutes later.

NY Thrift President Back on Trial for Fraud

The loan fraud trial of the former president of the failed Flushing Federal Savings and Loan Association opened in a Brooklyn federal court last week.

Carl Cardascia, president of Flushing Federal when it collapsed in 1986, has been charged with engaging in a loan kickback scheme with a New Jersey development firm.

The prosecution charges that the former thrift executive lent $5 million to World Wide Ventures Corp. in exchange for World Wide stock, which he then transferred to his wife under her maiden name.

Joseph Ryan, Mr. Cardascia's lawyer, said in court last week that the developer issued the stock to Mr. Cardascia without his consent. The lawyer maintains that the developer wanted to demonstrate to associates his control over Mr. Cardascia.

This is the second case involving Flushing Federal to go to court. Last year, a federal judge in Brooklyn acquitted Mr. Cardascia on charges of management fraud. □

Banks Push to Become Major Dealers in Commercial Paper Market

Continued from *page* 1

Having gained court approval to deal in the commercial paper market, commercial banks see commercial paper as an important product both for serving their corporate customers and for building up distribution for all securities.

"This product was a hallmark for breaking into the investment banking and securities markets," said Alexandra Hahn, vice president and head of short term finance originations at Bankers Trust Co., the first commercial bank into the market.

"It is one of the core products for Citicorp investment bank to build on," said John Ward, vice president.

Commercial banks have made headway in convincing corporate treasurers to make them additional dealers on programs. Ironically, that is the same strategy that Merrill Lynch used when it was first building its commercial paper business.

"We are able to do business easier, and it is less hard to convince people than it used to do be," Mr. Ward said.

Targeting Current Clients

Commercial banks are using several strategies to sell themselves to companies. Most banks focus on winning business from companies that they currently serve in other ways.

"Many of the significant programs we have won are from the bank's important clients," Ms. Hahn said. "On top of that, we have focused on getting some of the bigger and more conspicuous programs, such as the large acquisition-finance-type programs."

Bankers Trust can go after the acquisition finance programs – that is, financings tied to mergers – because of its leading role in financing such transactions.

Citibank is pursuing junk, or noninvestment-grade, commercial paper programs. "It is a natural extension of our lending business to noninvestment-grade corporations," Mr. Ward said.

Some banks use the strength of their base of regional investors as a selling point. While dealer-banks sell mostly to big institutions and money funds, Bank of America also sells commercial paper to many middle-market companies for which it handles other day-to-day banking needs, according to Lisa Trygg, vice president and head of the bank's money market group.

Is Market Too Small?

Some investment bankers argue that the noninstitutional investors cannot add up to a substantial market. But Bank of America's customer demand exceeds the amount of dealer commercial paper it currently handles, and it often has to buy for customers from companies that sell their own paper, Ms. Trygg said.

Similarly, First National Bank of Chicago markets its distribution network in the Midwest. "Over 50% of our paper is sold to corporations with excess cash, and the next biggest group is smaller banks in the Midwest," said Edward Austin, vice president and manager of the bank's commercial paper desk.

Smaller investors are less sensitive about getting the best rate and more concerned about safety, Mr. Austin said. "They turn out to be 3 to 5 basis points more reasonable," he said.

Profit pressures may force more investment banks to cut back their activities in commercial paper distribution.

Commercial banks have been able to win more substantial roles in bigger commercial paper programs, bankers said. That is why the amount of outstandings went up so much more than the number of programs.

Setback at Chemical

Chemical Bank was set back slightly this year when it moved its commercial paper dealer to its securities subsidiary. That forced the bank to give up some programs, because it was also supplying credit enhancement. But the bank added better accounts, according to a Chemical official.

"The accounts we brought on are generally larger and have a better credit quality," the Chemical banker said. "For 1990, that's the priority."

Data on each company's programs and outstandings were provided by the companies and were not verified by the *American Banker*. Banks were asked to give the number of active, domestic commercial paper programs at yearend 1989 and the amount outstanding on those programs, excluding their own commercial paper. ☐

Chemical's Dolan Dies in Car Accident

NEW YORK — Thomas M. Dolan, 42, vice president and manager of Chemical Bank's commercial paper department, died Jan. 15 in an auto accident.

The banker was en route to a ski area in upstate New York with his two children, who were not injured.

Mr. Dolan joined Chemical's commercial paper department in 1987 as a vice president. He became manager in 1988. Before joining Chemical, Mr. Dolan had been a vice president of Shearson Lehman Hutton Inc.

Mr. Dolan lived in Larchmont, N.Y., with his wife, Leslie, and children. ☐

Banks Willing To Pay Way Out Of Debt Mess

By JAMES R. KRAUS

ANALYSIS *Follow-up on the news*

NEW YORK — By agreeing to forgive a portion of their loans to Mexico and the Philippines, bankers have shown they are willing to swallow hefty losses in order to avoid making new loans to Third World countries.

"The debt-forgiveness genie is out of the bottle," said Lawrence Cohn, an analyst with Drexel Burnham Lambert Inc. "We're going to see additional examples of that."

In a series of recent landmark accords, U.S. and foreign banks have agreed to forgive 35 percent of their loans to Mexico and 50 percent of their loans to the Philippines.

Venezuela, Costa Rica, and Morocco are now negotiating debt reductions with their bankers, and similar talks will soon begin with Jamaica and Uruguay. Yugoslavia, and possibly Poland, also are viewed as candidates for debt reduction.

Observers predicted that banks will forgive a significant portion of their loans to these countries, provided that they do not have to make any new loans.

'Get Rid of It'

"Most U.S. banks with LDC exposure just want to get rid of it and not have the headaches anymore," said Mark Gross, a banking analyst with IBCA Inc. in New York.

Several factors are responsible for the new-found willingness of banks to accept debt reduction. The banks have been steadily increasing their reserves against LDC debt, and in most instances, accepting debt reduction now will not reduce profits.

What's more, the Bush Administration has put considerable pressure on banks to take some losses on their Third World loans. Debt forgiveness is the cornerstone of Treasury Secretary Nicholas F. Brady's initiative to assist financially troubled Third World nations.

A Nudge from Treasury

"Treasury took some of the chairmen aside and told them to play ball," said a source close to the banks. "The perception among banks was that if they didn't start accommodating they were going to get screwed."

In order to get banks to go along with the Mexican accord, the Treasury was forced to cough up what amounts to a $350 million public subsidy. Under the plan, the Treasury will agree to issue discount

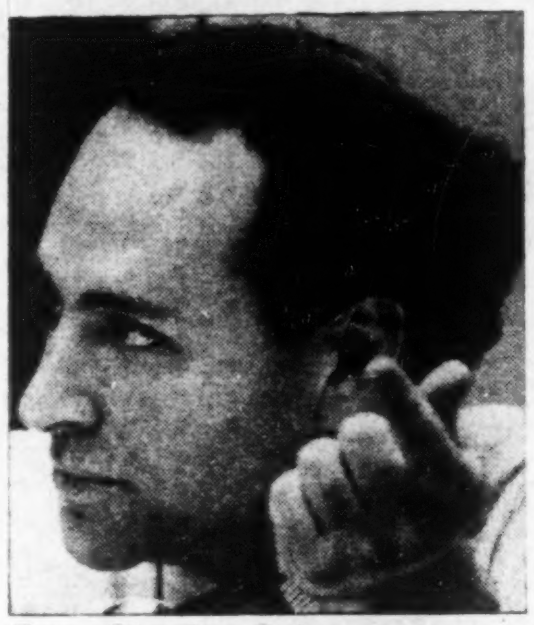
Banking Panel Faults Bush On Pace of S&L Resolutions

By ROBERT M. GARSSON



Rep. Charles Schumer

WASHINGTON — Members of the House Banking Committee criticized the Bush administration on Tuesday over the slow pace of thrift sales under the government's $159 billion bailout package.

"The crisis is still getting worse," said Rep. Charles Schumer, D-N.Y. "One question I have is, why have so many brain-dead thrifts been allowed to live so long?"

Rep. Frank Annunzio, D-Ill., said: "Lately, [the RTC] has spent more time posturing for more money than in using what they have."

The Resolution Trust Corp., created last August to dispose of insolvent thrifts, has seized 342 institutions and expects to take over 200 more within three years. So far, only 40 relatively small thrifts have been sold. Lawmakers expressed concern

Regulators escalated their bitter battle with deeply troubled Centrust Bank on Tuesday, ordering a five-day halt in the trading of the Miami thrift's depressed stock.

The Office of Thrift Supervision charged that Centrust's 10K annual report, filed last week, failed to recognize losses that would wipe out shareholder equity.

The $9 billion-asset institution also failed to disclose the "magnitude of its dispute" with regulators, the agency said.

The OTS described the action "as a message to Wall Street" about the condition of the thrift.

Centrust said the OTS action was aimed at forcing the thrift

Banks Pull Financing on Birmingham Buyout Deal

By LISABETH WEINER

Another leveraged buyout hit the skids on Tuesday when Birmingham Steel Corp. said it was advised that banks had second thoughts about financing the $525 million transaction.

At the same time, new doubts have surfaced about the likelihood of putting together a buyout of Hilton Hotels Corp. The company said in a statement that its board, at a regular meeting next week, will consider future alternatives available to the company – including doing nothing.

Was Bid Withdrawn?

Traders and arbitragers wondered whether this means that a bid for the company from JMB Realty, rumored to be $90 a share, has been withdrawn or lowered. Telephone calls to JMB and Hilton were not immediately returned.

The failed Birmingham transaction and the uncertainty over Hilton reinforces the ongoing caution and apprehension commercial bankers are feeling toward financing of leveraged transactions.

Fed Watchers Expect Interest Rate Decline

By ROBERT TRIGAUX

WASHINGTON — Most Fed watchers dismiss as temporary this year's upturn in long-term interest rates and predict economic weakness will spur more rate cuts in the federal funds market within four to eight weeks.

Brushing aside current market fears of inflation and rising rates in Japan, economists here predicted that federal funds should fall another 25 basis points, to 8%, no later than March – and even lower by late spring.

Prime Rate Cut in Offing?

A 7.75% fed funds rate should prompt another cut in the prime rate, from 10% to 9.5%, said numerous market analysts interviewed Tuesday.

Balance sheet managers at banks, however, were less certain of the rate trend. They said they are unlikely to tamper with the maturities in their asset-liability management strategies until they see more direction. (See "Capital," page 16.)

The economists, too, recognize the opposing forces at work.

For now, said rate watcher Ray Stone of Stone & McCarthy, "the Fed is in a box." Inflation worries from recent increases in food and fuel prices, concern that Japanese investors may be growing cool to U.S. Treasury securities, and the recent public call by the Bush administration for lower interest rates all have combined to limit the Fed's ability to influence short-term rates, said economists.

What's Japan Doing?

"A big concern with Japan is whether it is selling dollar-denominated securities or whether it is willing to buy more," said one analyst. "Spreads between Japanese and U.S. securities are sharp, not because U.S. rates are down and Japan's are up. Both rates are up, but Japan's is rising faster."

Lloyds Bank economist Robert H. Chandross said the recent rate upticks are not sustainable because the economy is not strong.

Not all rate watchers forecast easing by the Fed, however. Charles Lieberman, director of

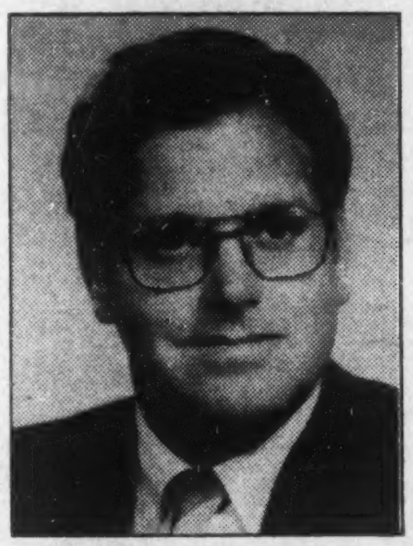
PEOPLE *in the news*

In Reshuffling, Meridian Hires Sparks of Midlantic

By ELLEN MEMMELAAR

Meridian Bancorp., a Reading, Pa., holding company that grew 25% last year despite the failure of its bid to acquire Philadelphia-based First Pennsylvania Corp., has reached into New Jersey to recruit a new vice chairman.

David E. Sparks, who had been an executive vice president of Midlantic Corp., Edison, N.J., was named vice chairman and chief financial officer as part of a reshuffling of top-management responsibilities at the $11.9 billion-asset Meridian. Mr. Sparks will be in charge of the financial, corporate development, investor relations, and funds management departments.



David E. Sparks

Mr. Sparks, 45, took the chief financial officer title from Terry L. Troupe, another vice chairman, who was put in charge of several nonbank operations including Meridian Asset Management Inc., Delaware Trust Capital Management Inc., American Title Insurance Co., Meridian Mortgage Corp., Meridian Securities Inc., and Meridian Automation and Technology Corp.

Ezekiel S. Ketchum, president and chief operating officer, oversees the holding company's banking units, including Meridian Bank, Delaware Trust Co., and First National Bank of Pike County.

Samuel A. McCullough, chairman and chief executive officer, described the alignment as a "two-major-business-unit structure" in which the banking and nonbanking units will take responsibility for support functions formerly performed by the holding company.

Background in Investor Relations, Marketing

Mr. McCullough said that Mr. Sparks' experience in management, marketing, and investor relations at Midlantic made him attractive to Meridian, which is seeking to improve its image among Wall Street analysts and investors.

Mr. Sparks, who describes himself as aggressive, said he sees "great opportunity for the expansion of existing businesses" and creation of new businesses, but he declined to be more specific.

As chief financial officer, he said he also hopes to have a hand in improving profitability. The holding company increased earnings 6% last year to $91.4 million – its 32d consecutive annual rise – but return on average assets fell to 0.89% from 0.99% in 1988.

At Midlantic since 1984, Mr. Sparks recently had to cope with the company's exposure to a declining real estate market in New Jersey. "Maybe he got tired of answering the real estate question," said James Hanbury, an analyst at Wertheim Schroder in New York. "It's a sideways move for him."

David Penn, a bank analyst at Legg Mason Wood Walker in Baltimore, was more positive: "The restructuring sounds good. Sparks seems to have a pretty good handle on what he is talking about."

Colin Crook, Computer Exec, Hired By Citicorp to Be 'Technology Czar'

By RICHARD LAYNE

Just as it did in filling the position the first time, Citicorp has gone outside the banking industry to hire a "technology czar." The new technologist, Colin Crook, will advise on computing and communications strategies for the most global and automated of banking companies.

Mr. Crook, formerly senior vice president of Data General Corp., a computer manufacturer, will succeed Paul Glaser as chairman of the Citicorp Technology Office. The office has a staff of 40 that reports directly to Citicorp chairman John S. Reed.

"He [Mr. Reed] wanted a perspective on the bank, based on my wide background in technology and other businesses around the world," said Mr. Crook.

Mr. Glaser, an aerospace engineer who joined Citicorp in 1973 from TRW Inc., has been appointed president of Quotron Inc., a money-losing Citicorp unit that sells equity pricing information.

Communications Experience at Data General

Mr. Crook managed the communication systems group at Data General, which developed and marketed advanced technology products. Citibank's technology office is concerned with the practical application of technology, not with banking products and services.

Industry observers said that Mr. Crook, also an electrical engineer, should fit into Citibank's efforts to explore advanced technologies for banking.

Citicorp, with offices in 90 countries, is expanding its global communications capabilities and has initiatives in technology intensive businesses such as retail point-of-sale services.

A native of Britain, Mr. Crook began his career with the British Broadcasting company and also worked for British Telecom. He also worked for Motorola in the United States. □

Bankers Trust Net Declines 45%

Provisions Quadrupled for Third World Loan Losses

By GORDON MATTHEWS

NEW YORK — Following the trend of other money-center banks, Bankers Trust New York Corp. on Tuesday reported that its fourth-quarter profits declined 45%. The decline was due to a quadrupling of its provisions for losses on loans to Third World countries and a decline in interest payments from Brazil.

Bankers Trust said it earned $101.2 million in the fourth quarter, or $1.17 a share, compared with $185.5 million, or $2.29, a year ago. The earnings were in line with analysts' expectations.

The provision for credit losses in the fourth quarter was $147 million, up from $30 million in the year-earlier period. With the latest loan-loss provision increases, Bankers Trust has made allowances for 70% of its Third World loans. It is now among the most heavily reserved money-center banks for foreign loans.

Fully taxable net-interest revenue in the quarter totaled $235.2 million, a decline of $88.6 million from a year ago. The decline was mostly due to the fact that minimal interest payments were received from Brazilian borrowers in the quarter, while $95 million of interest due in the fourth quarter a year ago was recognized.

BANKERS TRUST N.Y. CORP.
New York
Dollar amounts in millions (except per share)

FOURTH QUARTER	**4Q '89**	**4Q '88**
Net income	$101.2	$185.5
Per share	1.17	2.29
Net interest income (tax. equiv.)	235.2	323.8
Spread	0.56%	1.56%
ROA	0.64%	1.28%
ROE	17.52%	22.70%
Noninterest income	431.6	420.5
Noninterest expense	405.4	438.4
Loss provision	147.0	30.0
Net chargeoffs	321.7	29.0

FULL YEAR	**1989**	**1988**
Net income	($979.9)	$647.7
Per share	(12.10)	8.09
Net interest income (tax. equiv.)	948.4	1,020.6
Spread	0.67%	1.15%
ROA	NA	1.12%
ROE	NA	21.44%
Noninterest income	1,953.3	1,660.1
Noninterest expense	1,757.5	1,622.1

BALANCE SHEET	**12/31/89**	**12/31/88**
Assets	$55,658.4	$57,942.3
Deposits	26,220.1	32,490.6
Loans	21,153.5	24,115.1
Shareholder equity	81.9	81.1
Loss reserve	2,732.0	1,313.9
Reserve/loans ratio	12.92%	5.45%
Nonperf. loans	1,397.0	1,291.0
Nonperf. loans/loans	6.6	5.4
Primary capital ratio	9.48%	8.58%

As expected, Bankers Trust reported a net loss of $979.9 million, or $12.10 per share, for 1989 because of the $1.6 billion special provision for Third World loan losses in the third quarter. That compares with record net income of $647.7 million, or $8.09 per share, in 1988.

The bank noted that 1989 earnings would have fallen below the 1988 high mark even without the third quarter provisions. Excluding the big provision, net income for the year would have been 4% lower, totaling $620.1 million.

Noninterest income at Bankers Trust rose 3% in the fourth quarter against the period a year ago, totaling $431.6 million. This was largely due to higher revenues from trading activities and an increase in trust and custodian revenues.

Net Chargeoffs Rise

Total net chargeoffs for the quarter were $321.7 million, compared with $29 million last year. Net chargeoffs of developing country loans for the quarter were $172 million.

The chargeoffs included $114.3 million of nonperforming medium- and long-term loans to Brazilian borrowers and $41 million of similar loans made to Argentine borrowers.

During the fourth quarter, Bankers Trust said it continued accruing interest on most of its medium- and long-term loans to Mexican borrowers at a level that reflected the bank's decision to exchange 75% of that debt for interest reduction bonds and the remaining 25% for principal reduction bonds. □

Corrections

A Jan. 22 article ("Community Reinvestment Vexing to Wholesale Banks," page 6) misstated Morgan Guaranty Trust Co.'s investment in Community Capital Bank. Morgan invested $150,000 in the community development bank's stock.

■

An article in the Jan. 22 edition ("First Fidelity Watched for Move on Integrated," page 22) carried outdated information about the intended sale of Integrated Resources Inc.'s core businesses. Those businesses were sold to Broad Inc. on Jan. 18, the buyer said. □

By John J. Mingo

The Tantalizing Prospect Of a Thrift Acquisition

There has been a virtual explosion in bank/thrift deals since Aug. 9, when the Financial Institutions Reform, Recovery, and Enforcement Act was signed into law. About 60 bank acquisitions of thrifts have been announced under that thrift-bailout legislation.

Many bankers will want to consider the following questions before proceeding with such an acquisition: Why should I consider acquiring a thrift? What should I look for and what should I avoid in examining a thrift for acquisition? What would I do with a thrift?

Why should I consider acquiring a thrift?

There are two reasons for seriously pursuing a thrift. The first is a strategic move. For example, the thrift may be the only institution available for acquisition with significant market share in an attractive new geographic market.

Also, a thrift acquisition may be the only way to enter a desirable market, because of state or interstate branching restrictions.

The second reason is price. By any standard measure, thrifts are simply less expensive than banks. Since the October 1987 stock market crash, bank transactions involving target institutions with more than $500 million in assets had the following median multiples: 1.8 times price/book, 15 times price/earnings, and 6.0% premium/deposits.

During the same period, sound stock thrifts in excess of $200 million in assets sold for the following median multiples: 1.2 times price/book; 12.5 times price/earnings; 2.0% premium/deposits. Thus the typical thrift deal has been approximately a third less expensive than a typical bank deal measured in price/book ratios and price/earnings ratios, and less than half as expensive measured in terms of premium-to-deposit ratios.

What should I look for and what should I avoid in examining a particular thrift before acquisition?

Thrifts are quite different animals than banks, but the differences are often more apparent than real. Here is a checklist of the operating, risk, tax, and regulatory differences that will influence any final decision to acquire a specific thrift.

1. Credit quality. The buyer will need to take more care with the due-diligence process than is typical in a commercial bank acquisition. In particular, the buyer must look closely at the thrift's commercial real estate loan portfolio and commercial real property (for example, other real estate owned and development properties).

Measuring Interest Rate Risk

2. Interest rate risk. The majority of thrifts still suffer from negative GAP. However, interest rate risk can be measured fairly accurately and, more importantly, it can be "priced."

That is, the buyer can measure the impact on the future earnings stream of eliminating any portion or all of the rate risk. Also, many banking institutions are positively GAPed and thus can use a thrift acquisition to reduce consolidated rate risk.

3. Funds volatility. There are two concerns with respect to funds volatility. First, there may be some initial runoff of thrift deposits after an acquisition, especially if the target thrift has been paying higher deposit rates than the other thrifts and banks in town.

> **'By any standard measure, thrifts are simply less expensive than banks.'**

Second, thrift customers have been more rate sensitive than other deposit customers. Even after the initial runoff of deposits, the buyer will need to pay greater attention to how deposit pricing affects deposit levels.

Impact of Exit Fees

4. Issues relating to insurance premiums and entry/exit fees to the insurance funds. This is a complex area, but the buyer should keep some simple rules of thumb in mind.

First, the agencies recently have set combined "entry/exit" fees at 170 basis points in those cases (such as branch purchases) where deposits insured by the Savings Association Insurance Fund are to be converted to the Banking Insurance Fund.

In whole-thrift transactions, these fees are so onerous that virtually no buyers are seriously considering paying them. Thus it is simply a question of how to structure the transaction to avoid paying the entry/exit fees.

Remember that under the thrift-bailout law, the buyer has significant flexibility in structuring a transaction to have the acquired entity insured by either fund and can, therefore, avoid the entry/exit fees.

Tax Recapture Costs

5. Bad debt reserve tax recapture. Thrifts have enjoyed special tax treatment, allowing them to deduct up to 40% of pretax income for additions to bad debt reserves, regardless of actual loss experience.

If the acquired thrift is converted to a bank charter, or merged into a bank, or even if the thrift is left alone as a separate thrift, but certain portfolio restrictions are violated, the previously deferred taxes on the excess loan-loss provisions will become due and payable.

Most buyers are anticipating that this tax will come due, and they are factoring into the purchase price an average of 50 basis points on assets as cost of the tax recapture. Obviously, the actual tax recapture costs will vary depending on the specific institution.

6. Federal Home Loan Bank advances. Some bank buyers may view access to the Home Loan Bank System window as positive. In such cases the thrift acquisition will need to be structured carefully so the institution will continue to meet the qualified thrift lender test embodied in the thrift-bailout law.

As a practical matter, thrifts a fraction of the size of their acquiring bank holding companies will have no difficulty meeting this test.

But failure by the operating thrift subsidiary (or thrift converted to a bank) to meet the test will result in a loss of Home Loan Bank System borrowing privileges and possible forced

GRAPEVINE/

By Jed Horowitz

Morgan Mines California. J.P. Morgan & Co. is meeting with California bank regulators this week to lay the groundwork for a state-chartered trust company. Morgan Guaranty Trust Co. has run a private banking business out of San Francisco and Los Angeles since the mid-1980s, but cannot legally sell property for clients as a trustee. "Most Californians own real estate," says George W. Rowe, Morgan's new head of private banking on the West Coast, in explaining the move.

The planned trust unit, J.P. Morgan California, will target individuals and family groups with about $5 million of assets, a market that Mr. Rowe concedes is fiercely competitive. "We are really after the investment management business as opposed to the trust business" he said. The well-traveled Mr. Rowe, who had been running Morgan's corporate finance unit in London, said he hopes to have the operation running by early summer.

* * *

Signs of the Times? A group of J.P. Morgan officers were chagrined recently to receive service charges for checking accounts they keep at the Bank of New York. It seems that for years Bank of New York has offered free checking, with no minimum balance requirements, to officers of Morgan and other financial institutions in an effort to build its personal banking business. Bank of New York sources say one branch mistakenly assessed the Morgan officers a $6 maintenance fee, but admit the bank is considering revising the free privileges.

Bank of New York veterans can sympathize with their Morgan pals. For years, Bank of New York officers and their colleagues at the U.S. Trust Co. enjoyed reciprocal "instant loan" agreements. "We'd apply in the morning, and get it approved by afternoon," a source said, noting that bankers prefer to keep details of their personal finances distant from coworkers. The arrangement ended a few years ago. "We used to have a few hundred officers, and now it's probably thousands," said the official, sighing for a lost era.

* * *

Sweating Out the Movies. Former traders from Salomon Brothers' once mighty mortgage desk are quaking over how they'll be depicted in the screen version of *Liar's Poker*. The book's publisher confirms that the best-selling chronicle of greed and grubbery at the Wall Street trading giant has been sold to producers at Warner Brothers.

The mortgage traders are portrayed by author Michael Lewis as a "brotherhood of hoods," who in their heyday mercilessly exploited thrift executives. Their boss, Lewis Ranieri, "created a trading desk in his own image: Italian, self-educated, loud, and fat," Mr. Lewis writes.

The traders, many of whom have left Salomon, can't bear the thought of the movie. Danny DeVito will play "Lewie," one speculates with shivers. John Candy will run the desk, another says.

* * *

Still Big in Texas. And now for the flip side of those sweet deals regulators cut with early acquirers of Texas banks. NCNB Corp. says its fourth-quarter and yearly expenses rose a whopping 107% in 1989, partly because of "unusually exorbitant" fees paid to real estate agents and other professionals to sell assets inherited with the acquisition of First RepublicBank Corp. of Texas, now NCNB Texas.

"We paid $700,000 to one guy to move property by the end of the year," chief financial officer James Hance told analysts last week.

Personal Resume. Despite his high-profile position, not much is known about Citicorp's new president, "Rick" Braddock. The bank company will only provide a thumbnail sketch: born in Oklahoma City on Nov. 30, 1941; graduated from Dartmouth in 1963 with degree in history, cum laude and Phi Beta Kappa; MBA from Harvard Business School, class of 1965.

Pressed about his family background, a bank spokeswoman says only that Mr. Braddock's father was "an executive."

For the record, a few additions gleaned from friends and colleagues: Mr. Braddock was reared in Greenwich, Conn. His dad, Robert, was president and a director of General Reinsurance Corp. Rick and his second wife, Susan, live on Manhattan's Upper East Side with their six-year-old daughter, Tina. They have five other children between them from previous marriages. Mr. Braddock's oldest daughter recently graduated from Dartmouth.

He's a competitor: squash several times a week, jogging, tennis, and some skiing with the family. He sweated on Dartmouth's intramural basketball teams. He has a vacation home in St. John's Island, Florida, and complains that he doesn't spend enough time there.

Budget Warning: Insured Deposits Pose Big Threat

By ROBERT M. GARSSON

WASHINGTON — Buried deep in the 1,569 pages of President Bush's 1991 budget are a few simple paragraphs that have heated up the debate over reform of the deposit insurance system.

The document does not make specific policy recommendations. But it warns that bank deposits have become a $3 trillion contingent liability of the federal government, and it raises the question of how the nation's taxpayers can be protected from the threat that "tens of billions of dollars" in bills will soon come due.

ANALYSIS
Follow-up on the news

Flaws in the deposit insurance system were blamed by many for the thrift crisis. James Barth, former chief economist for the Federal Home Loan Bank Board, said the system sapped market discipline, especially because some large institutions "have been deemed too big to fail."

Yet the rescue law enacted in August, which created a new thrift fund housed within Treasury, hardly touched upon the major deposit insurance issues. Instead, it directed Treasury to conduct a study and report back in February.

Choosing Sides

Now, deposit insurance is moving to the front burner. The New York Clearing House Association recently called for the abolition of the doctrine that the nation's largest banks are "too big too fail." And with the unveiling last week of President Bush's budget, the terms of the debate have been recast with the taxpayer on one side and the banking and thrift industries on the other.

Until now, discussion of deposit insurance has been part of the financial services industry's turf wars. To the securities and insurance industries, deposit insurance gives banks an unfair competitive edge, and the federal backing is cited as a reason for limiting bank powers.

Small banks argue that the foreign branch deposits should be assessed, a position the money-center institutions have thus far been able to defend against.

Savings and loans are looking for parity in the premiums paid by banks and thrifts. Bankers are virtually unanimous in arguing – with considerable emotion – that their insurance fund should not be merged with the new agency created to back thrift deposits.

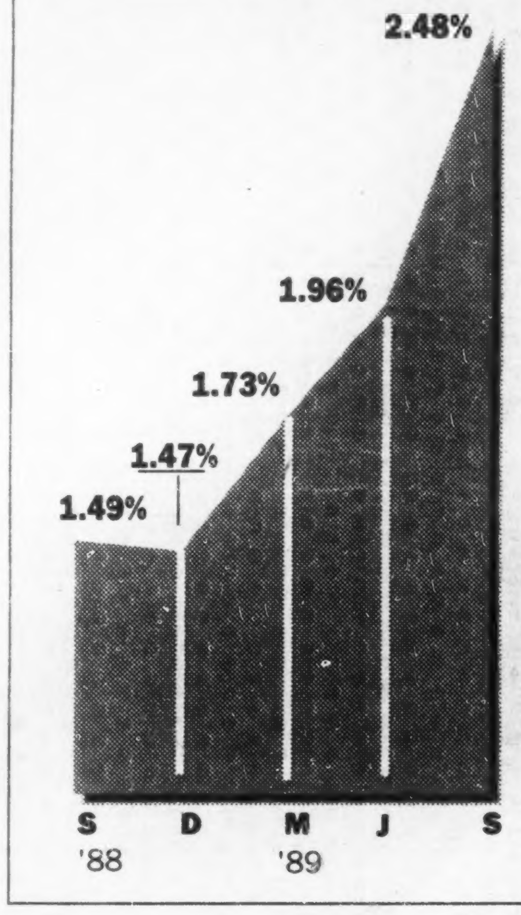
New England Examiners Crack Whip, Experts Say

Mounting Loan Troubles....

Percent of nonperforming assets at top banks in region



....Spur Controversy Over Examinations

JOHN J. LYONS *Principal at Lyons, Zomback & Ostrowski*

' I'm very worried that [the regulators] are overdoing it'

PAUL WIECHMAN *Regional director of the Federal Deposit Insurance Corp.*

'We still maintain a fair but firm supervisory posture. We are not changing examination techniques'

By BILL ATKINSON

In the wake of mounting real estate problems, federal examiners are cracking down hard on New England institutions, according to bankers and consultants.

Regulators are harshly scrutinizing loan portfolios, in some cases forcing performing credits to be classified as troubled. Some consultants asserted that examiners are even requiring some new real estate loans to be listed as substandard.

Observers suggested that the regulators are overreacting because of criticism that they moved too slowly when the Texas economy collapsed. They said the hard-line approach could make matters worse by shutting off credit to worthy borrowers and delaying a rebound in the region.

"I'm very, very worried that they are overdoing it," said John J. Lyons, managing principal at Lyons, Zomback & Ostrowski, referring to the regulators. His New York bank and thrift con-

U.S. Seizes Centrust, Sells Texas S&L To Banc One

By STEVE KLINKERMAN
and JIM McTAGUE

Federal regulators seized one troubled thrift on Friday and placed another in safer hands.

The seizure was of the $8.2 billion Miami-based Centrust Bank, the largest thrift in the Southeast. It had been expected.

In Texas, the Resolution Trust Corp. sold Bright Banc Savings of Dallas to Banc One Corp. Banc One will receive $1.9 billion in relatively healthy assets, while the government will continue to control Bright Banc's remaining $1.9 billion in assets. Terms of the deal had not been made public by late Friday afternoon.

The acquisition would give Columbus-based Banc One a $13 billion presence in Texas, where it is the fourth-largest bank company.

About a third of Banc One's $41.4 billion of total assets will be in Texas, hinging a large portion of its financial future on success in the state.

"Success in Texas is vital to the future of the company," said Frank Anderson, a senior analyst with Stephens Inc., a brokerage house in Little Rock, Ark.

The acquisition of Bright Banc adds 50 offices to Banc One's 63-branch Texas network. The bank company has previ-

Iowa Governor To Decide Fate Of Interstate Bill

By NANINE ALEXANDER

NEW YORK — One of the last holdouts to the nationwide interstate banking movement is expected to join the fold this week, after the Iowa Legislature voted to open the state's borders to banks from contiguous states on Jan. 1, 1991.

The reciprocal measure allows Iowa banking companies to reach into bordering Illinois, Minnesota, Missouri, Nebraska, South Dakota, and Wisconsin for acquisitions. But it is too early to tell whether Iowa banks will become prey or predators.

If Gov. Terry Branstad signs the bill – as is widely expected – only Hawaii, Kansas, Montana, and North Dakota would still lack laws permitting some kind of interstate activity for banks. Interstate laws are already in effect in 33 states and the District

Wolf Likely Replacement for Wall

By BARBARA A. REHM

WASHINGTON — Bush administration officials said Friday that they expect Frederick D. Wolf, the former No. 2 official at the General Accounting Office, will be nominated to succeed M. Danny Wall as the nation's top thrift regulator.

The two other leading contenders have dropped out of the running, leaving Mr. Wolf as the clear-cut choice of the Treasury Department, according to the officials, who asked not to be named.

Mr. Wolf, a 49-year-old partner at Price Waterhouse & Co., wants the job, according to coworkers.

"His governmental juices are still flowing," said one of Mr. Wolf's colleagues. "This job requires a set of skills that very few people possess, so to get the call is a high compliment."

The Treasury Department's official response is that a final decision has not been made on who will replace Mr. Wall as director of the Office of Thrift Su-

Frederick D. Wolf

pervision. "We're still considering several candidates," said Treasury spokeswoman Cheryl Crispin. The administration has been scrambling to replace Mr. Wall since he announced he would resign on Dec. 4.

Mr. Wolf was out of town Friday and could not be reached for comment.

The other top contenders – former Federal Reserve Board Governor Philip C. Jackson and

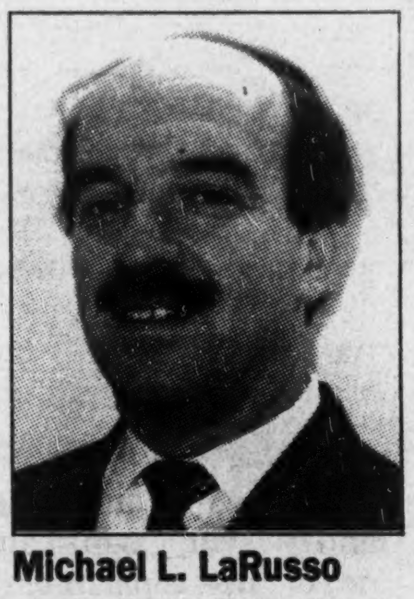
Analysts Laud First Fidelity For Hiring Bank Regulator

By NANINE ALEXANDER

Anthony P. Terracciano won some analysts' praise last week for including Michael L. LaRusso – a bank regulator – among three key appointments at First Fidelity Bancorp., Newark, N.J.

"Bringing in an examiner shows a real sensitivity to the marketplace," said James J. McDermott Jr., an analyst at Keefe, Bruyette & Woods Inc., New York. It sends a "strong signal that [Mr. Terracciano] will move quickly to clear up credit-quality problems by seizing control of credit and operating systems," he added.

Mr. LaRusso, who is 44, has spent 22 years in the Office of the Comptroller of the Currency. In his most recent post, senior national bank examiner in the multinational and regional banking division, he supervised the nation's 11 largest nationally chartered banks.



Michael L. LaRusso

With a veteran bank examiner in a high position, Fidelity will improve its credibility with both examiners and investors, observers said.

"Mike is an expert in credit analysis," said Robert Herrmann, senior deputy in Comptroller's office. That expertise will prove beneficial at First Fidelity, a $30.7 billion-asset superregional holding company that has suffered recently from bad real estate loans.

Moving quickly to put his stamp on First Fidelity, Mr. Terracciano announced Mr. LaRusso's appointment Thursday, his first day as chairman, chief executive officer, and president. Mr. LaRusso will join First Fidelity on Feb. 16 as senior vice president and director of audit and policy development. Mr. Terracciano also named a vice chairman, Peter C. Palmieri, and another senior vice president, Donald C. Parcells.

Mr. Terracciano said that he is focusing on asset quality, productivity, staffing, and business mix and that Mr. LaRusso will be a big help in those areas.

Among the challenges will be determining just where First Fidelity is in its credit curve.

According to one analyst, "One of the first questions he'll have to ask is whether First Fidelity's problems are due to a weak real estate market or weak underwriting practices."

Mr. LaRusso, who was not available for interviews at the end of last week, has served as resident examiner-in-charge at the Bank of America, Chase Manhattan Bank, and Marine Midland Bank. ☐

Stockholders Approve Merger of C&S, Sovran

NEW YORK — Shareholders of Sovran Financial Corp., Norfolk, Va., and Citizens and Southern Corp., Atlanta, voted in separate meetings to approve the proposed merger under the name Avantor Financial Corp.

According to a pro forma financial statement, Avantor would have 1,000 offices in eight states from Florida to Maryland and $48.7 billion in assets, making it the 14th-largest banking company in the nation.

The companies plan to complete the merger in the second quarter.

Bill Would Prevent Sale Of Affiliates' Securities

WASHINGTON — Sen. Richard Bryan, D-Nev., and other members of the Senate Banking Committee introduced a bill to prohibit any federally insured deposit institution from selling on its premises the securities of an affiliated company.

"We have heard of too many cases where individuals intended to buy insured certificates of deposit but were steered instead to buy high-yield or so-called junk bonds," Mr. Bryan said. "This is a blatant abuse of depositor trust."

Fed Governor Angell Says Inflation Rate Must Drop

DAVOS, Switzerland — Federal Reserve Board Governor Wayne Angell said the U.S. inflation rate of about 4.5% was unacceptable.

Addressing the World Economic Forum, Mr. Angell said the decline in the inflation rate from double digits in the early 1980s had been one necessary step for the U.S. economy.

"The task in the 1990s is to move from 4.5% to a rate that indeed approaches price stability," he said. — **Reuters**

Downgrade Still Possible For Crossland, Says S&P

NEW YORK — Standard & Poor's Corp. said it continues to review for downgrade certain debt of Crossland Savings despite the thrift's recently proposed recapitalization.

Under review is the B-rated subordinated debt and BB-minus/B certificates of deposit. The company's C rating for preferred stock was affirmed and taken off the CreditWatch list Jan. 8.

S&P said that if the recapitalization is completed and regulatory capital requirements are met, Crossland's CD rating could be affirmed.

Brady Sees New Credits To 3d World

By ROBERT M. GARSSON

WASHINGTON — Treasury Secretary Nicholas F. Brady stoutly defended the Third World debt initiative that bears his name, telling a congressional panel Friday that he believes banks will soon renew lending to less developed countries.

Mr. Brady conceded he is disappointed banks participating in the Mexican debt agreement generally preferred to accept partial debt forgiveness rather than lend new money.

But he said signs are visible that banks will choose new money in upcoming accords. An agreement with the Philippines, he said, is an example in which banks already have agreed to make $600 million in new loans.

'A Growth Situation'

"I can't imagine banks won't want to be part of a growth situation," Mr. Brady said. "But if countries can't promote growth, the banks won't want to be in."

He also defended his initiative against criticism that the Mexican accord, the first major Brady Plan agreement, would have only a slight impact on debt service. Mexico has bought zero-coupon Treasury bonds that will cover principal payments on $40 billion of debt, he said.

"Because of the defeasance with zero-coupon bonds, the obligation to repay over $40 billion in debt is removed entirely from this generation of Mexican people," he said.

Mr. Brady said he believes that Venezuela and Brazil "are the two big items in 1990" under his debt plan.

Inflation Moves Downplayed

In an appearance before the Joint Economic Committee, Mr. Brady downplayed the need for new inflation-fighting moves, a view apparently at odds with

No Policy Shifts Seen On South Africa Loans

By JOHN EVANS
and JAMES R. KRAUS

U.S. and foreign banks do not expect the political liberalization now taking place in South Africa to have any immediate impact on their lending policies to that country.

The Pretoria government announced Friday plans to free long-time political prisoner Nelson Mandela and lift a 30-year ban on the African National Congress, the blacks' main vehicle for obtaining equal rights.

Some banks reached after the announcement said, however, that there would be no change in policy until free elections were held in South Africa.

A Political Problem

Others said restoring financial relations with South Africa depended mainly on government initiatives in Washington, London, Bonn, and Paris.

U.S. banks are not now permitted to lend to South Africa and have a relatively small amount of loans outstanding, about $2.4 billion in September, down from about $5 billion at the end of 1984. South Africa owes foreign creditors some $23.5 billion.

Loans Not Disclosed

U.S. banks have not disclosed their outstanding loans to South Africa because the amounts fall below what they are required to report under U.S. disclosure regulations.

Among U.S. banks, Citicorp is estimated to be the biggest lender to South Africa with $666 million in outstanding loans, followed by Chase Manhattan with $340 million.

In Europe, banks on Friday welcomed the South African move but said any change in bank policy would be slow.

Some Lending Continues

One European banker noted that banks have continued to lend indirectly to South Africa by lending to customers with investments in the country.

"Most banks have quietly supported their key customers, including granting credits and trade finance for South African business," he said.

A Barclays spokesman, speaking on condition he was not identified, remarked: "I can't see banks considering going back in unless . . . the laws are fully rescinded and public opinion made it acceptable for us to do so."

Forecasts Not Given

The major Swiss banks, which have historically close links with South Africa, including selling the nation's important gold production through the Zurich bullion market, were also reluctant to forecast an imminent normalization of banking and financial relationships with Pretoria.

A spokesman for Union Bank of Switzerland in Zurich said the bank welcomed the liberalization but added that "economic sanctions were the wrong way to address the problem." ☐

Corrections

A page 2 article on Feb. 2 carried an incorrect headline. It should have stated that the American Bankers Association is seeking a tighter money policy, citing concerns about inflation.

■

A Feb. 2 article ("Risky Loans at 2 Banks Soar Under New Rule," page 1) misstated the size of Bankers Trust New York Corp.'s unused commitments to highly leveraged transactions. It had $1.8 billion committed to such deals at the end of 1989, including $400 million added because of the new definition. The article correctly stated the amount of the bank's outstanding highly leveraged loans at $3.9 billion. ☐

COMMENT / *By Alex J. Pollock*

Deposit-Insurance Debate Should Consider Inflation

In 1974, on the 40th anniversary of the creation of the Federal Savings and Loan Insurance Corp., Congress raised the deposit insurance limit to $40,000. From the discussions of the last few months, it seems that commentators believe this represents the good old days and that $40,000 is a much better level of deposit insurance than the $100,000 of today.

Yet the two amounts are the same, adjusted for inflation. The most essential step in economic thinking is to adjust for depreciation of the monetary unit and operate in terms of constant dollars or purchasing power.

Our financial journals and journalism are currently replete with theoretical discussions of deposit insurance. They typically address its effect on managerial incentives, consider its moral hazard, or treat it as a put option granted by the government.

Inflation Ignored

They usually, however, treat deposit insurance limits in nominal dollar terms and seldom or never consider its history in real dollars, adjusted for inflation.

Since 1974, prices in the U.S. have increased about 2½ times. They have multiplied by a factor of five since 1950, and since 1934, when FSLIC deposit insurance was introduced at $5,000, prices have increased by a factor of 9½.

The real story is that while deposit insurance coverage has increased over the past 55 years, its increase has by no means been what the nominal figures suggest.

Expansion Limited

This provides some important lessons in perspective. Adjusted for inflation, from 1974 to 1989, deposit insurance coverage did not increase 2½ times but remained the same. From 1969 to 1989, the coverage did not increase five times but only 1.5 times. From 1934 to 1989, deposit insurance coverage increased not 20 times but only about twice.

What would happen if the $100,000 level remained in place but that we continued to experience an average 4% annual inflation?

With these assumptions, by 1995 deposit insurance coverage will have dropped to $79,000 1989 dollars, or about 20% less than real 1974 coverage. Suggestions have recently been made that deposit insurance coverage should be reduced to $80,000 or $90,000.

Just Do Nothing

In inflation-adjusted terms, we will achieve this by 1995 by doing nothing. If this process continued, by 1999 the real deposit insurance level would be reduced to the equivalent of 1969 coverage, and by 2008 to the equivalent coverage of 1934.

> **'How much in savings is needed to provide a reasonable retirement income?'**

Suppose you are a believer in lower deposit insurance levels. Your policy prescription is clear: hold deposit insurance at its current nominal level and let ongoing inflation reduce the real coverage month by month. This implies a smooth transition with no disruption and has the virtue of utter simplicity.

We might consider that deposit insurance should reflect not only the depreciation of the monetary unit but also the real growth of the economy.

Between 1934 and 1989, real gross national product per capita increased 4.3 times. If we consider deposit insurance relative to gross national product per capita, the ratio has dropped to half its 1934 level. Had we maintained the 1934 level of deposit insurance relative to this measure of general economic welfare, the insurance coverage would now be $205,000.

Perhaps it is correct to say that as the American population grows richer and better educated, the need for government protection of its savings grows less.

Perhaps, on the other hand, the U.S. population now needs more government protection for its savings than in 1934. More savings are needed to provide for a longer retirement with increasing life expectancy, not to mention the lack of support from relatives with the breakdown of the American family.

A Link to Retirement

How much in savings is needed to maintain a reasonable retirement income? Should deposit insurance protect the savings principal that provides this income? How much insurance would this be?

Today's $100,000 coverage protects a purchasing-power annuity of only $5,667 a year for a retired person, in 1989 dollars. Is that too much? Not enough?

However we may define an appropriate level of coverage, any analysis that does not adjust for inflation does not merit consideration. ☐

Mr. Pollock is president and chief executive officer of Community Federal Savings and Loan Association, St. Louis.

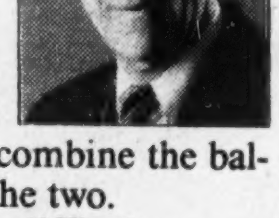
"SOUND OFF"

In a recent speech before the New York State Bankers Association, Robert L. Clarke, Comptroller of the Currency, predicted a change in the nature of ownership of banks in the United States. Given the growing need for capital, he said the traditional separation of commerce and banking is likely to erode, allowing industrial and nonbank financial companies to own banks. Judy Ferring, of the American Banker features department, asked industry leaders and observers:

Q *Should industrial companies be allowed to own banks?*

■ Lawrence P. Klamon
President and CEO
Fuqua Industries, Atlanta



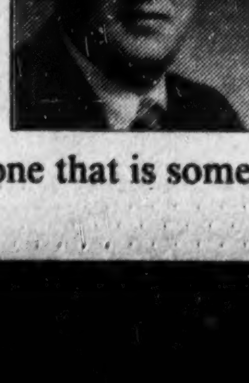
In our case [when Fuqua owned Georgia Federal Bank], we found it not to be a good idea. Combining a financial and a nonfinancial company was all right until [the Financial Accounting Standards Board] changed the accounting rules and we had to combine the balance sheets of the two.

We found it difficult to explain to investors, although there was no problem in running the company itself. [In 1980] we had $800 million in assets, including a $224 million investment in Georgia Federal. Georgia Federal had $4 billion in assets but earned only about 25% of our income.

So we ended up with an entity that looked incredibly leveraged by [financial] industry standards. It made us look like a bank, when in fact more of our income was from Fuqua's principal sources [lawn mowers, photo processing, and sporting goods]. It wasn't total assets but total equity that was important.

Companies like Ford Motor Co. or General Electric are big enough to overshadow their financial organizations, but Georgia Federal's assets were five times Fuqua's. For an industrial company to own a financial institution, if the financial company is larger, it will lower the perceived value of the industrial company.

■ Harold Stuckey
President
Lexington (Neb.) State Bank



There seems to be a whole variety of different companies that might be in the banking industry. I have more of a problem with nonfinancial companies than I do with one that is somehow related – for instance, brokerage or insurance.

All the financial services are going to get blended together eventually, but it would be chaotic to let nonbanks in right now. We're probably not ready for the whole area of nonbank banks until we deal with things like [deposit] insurance reform and walk through FIRREA a little more. There are a lot of things on the agenda before we logically come to all that.

And some of these industrial companies might want to wait a little to see what's going to happen with this CRA thing. From what we know of FIRREA's CRA requirements, it may be difficult enough for those in the financial industry to deal with it. For someone whose experience is selling shirts and socks, it may be harder.

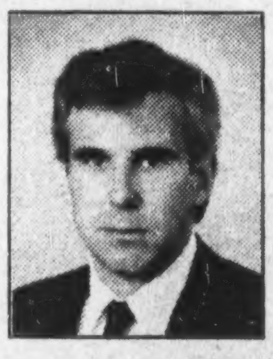
■ Robert E. Mannion
Partner, Arnold & Porter, Washington;
Former deputy general counsel,
Federal Reserve Board

While I do not think that a complete dropping of the wall would be advisable, it might be wise to allow on a selective basis, particularly when there are troubled financial institutions involved. [A total change] is unwise because industrial companies don't necessarily have the expertise or talent for running a bank.

The common argument is industrial companies will abuse banks, but there are severe restrictions on how an owner can use banks in dealing with affiliates. In addition, prior to 1970, several industrial companies did own banks. The Federal Reserve reviewed several – 3M, Goodyear, Beneficial Corp., R.R. Donnelly, Olin Corp. – and found there weren't abuses, so it seems it's possible to do it without severe repercussions.

There are some ways industrial companies might be able to use banks that would make sense: to provide a bank for their employees, for example, or to redevelop an area of the city where they're located.

■ Edward L. Yingling
Executive director,
government relations
American Bankers Association



The ABA supports the concept of banks being allowed to affiliate with firms engaged in all types of financial services, but not those in commerical or industrial activities. There is still a great deal of opposition in Congress and elsewhere to combining banks and commercial activities, based in large part on a "populist" concern about concentration of economic resources.

On the other hand, the walls between commerce and banking are already breaking down; commerical firms already own S&Ls, and S&Ls are increasingly like banks. As S&Ls become even more bank-like, or even become banks, this policy will become increasingly apparent.

Policymakers will have to look at the basic reasons for the separation: concentration of resources, unfair competition, conflict of interest. ☐

Luxembourg Stands Behind Money-Laundering Rules

LUXEMBOURG — Despite complaints from bankers, Luxembourg's financial regulator strongly defended its tough new rules aimed at curbing money laundering.

The regulations, sent to bankers in November, include a provision requiring banks to identify who has control of an account.

"I remain convinced that it must be possible to know who the customer is," Jean Guill, director of the Luxembourg Monetary Institute, told a financial conference. It is simply unrealistic to expect private banks to find out if their customers are reputable, he added.

The regulator hopes the provision will prevent scandals such as the one involving the Luxembourg-registered Bank of Credit and Commerce International and some of its directors, charged in Florida with laundering millions of dollars from Colombia's Medellin drug cartel.

Luxembourg is keen to protect its reputation in banking, which is a major money earner for the small country. The country has strict bank secrecy laws and has been reluctant to take action against suspected laundering without clear proof.

But some bankers believe the new efforts to prevent fraud are overzealous.

"Implementing regulations to this law give. . . quite a headache to the whole financial community," said Jean Krier, chairman of the **Luxembourg Bankers Association.**

Bankers say it is difficult to comply with the new regulations because it is not always possible to identify exactly who controls an account, particularly when listed in the name of a shell company.

"Sometimes it is very well camouflaged. These crooks are very clever," said Paul Brown, senior general manager at **Lloyds Bank** in London. He and others said bankers need to ask themselves whether they have confidence in a client. If not, decline the business.

Luxembourg has said it is looking into the charges filed in Tampa, Fla., against BCCI, which last month reached a plea-bargain agreement under which some charges were dropped in return for cooperation in the investigation and the forfeiture of $14.8 million.

U.S. prosecutors say they have taped evidence showing that BCCI directors knew money was coming from criminal activities but ignored it. The bank has denied the allegations in court.

... by country

ISRAEL

Foreign and domestic creditors of **Koor Industries** Ltd., Israel's biggest industrial group, reached a compromise early Friday to write off $255 million in debt, according to a Finance Ministry official.

The compromise capped three days of intensive negotiations over the conglomerate's fate. "I think we finished with the foreign banks. I suppose they will get approval from their management," Finance Minister Shimon Peres said.

Under the deal, foreign banks will write off $75 million of the $250 million owed them, the official said. Israeli banks agreed to write off $180 million of the $800 million they put up.

Koor's board has extended its halt on interest and principal payments until a comprehensive solution can be reached, a company official said Thursday.

PHILIPPINES

Manila will have to lower some of the economic targets agreed upon with the International Monetary Fund because of a shortfall in new funding from abroad, said outgoing central bank Governor Jose Fernandez.

Philippine officials will discuss possible revisions with an IMF review group arriving in March, Mr. Fernandez said.

The Philippines earlier said it wanted to raise $1 billion in new money from commercial banks, but officials now expect $700 million to $750 million.

The Philippines will sign an agreement in Tokyo on Feb. 16 for the new loans, to be backed by the issue of 15-year bonds on the Luxembourg market.

After a failed coup attempt in December, Manila scaled back its growth projections for 1990 to between 5% and 6% from the original 6.5%.

In exchange for an IMF financial package of over $1 billion, Manila had committed to the following targets: gross reserves of $4.04 billion, a current account deficit of $1.40 billion, exports of $8.9 billion, and imports of $11.4 billion.

— Reuters

MEXICO

Responding to criticism, Mexico's chief debt negotiator said a $48.5 billion debt-reduction pact represents "the beginning of life after debt" for Mexico.

Assistant Finance Minister Jose Angel Gurria said the accord, coupled with earlier debt-for-equity swaps, and buybacks, will shave some $20 billion off Mexico's debt, which totaled $100 billion in 1988.

U.S. Treasury Secretary Nicholas Brady, International Monetary Fund Director Michael Camdessus, and the heads of 15 of Mexico's leading commercial creditor banks were scheduled to sign the debt-reduction agreement in Mexico on Sunday.

"It's not a celebration, it's not a fiesta, it's a ceremony to mark the beginning of life after debt," Mr. Gurria said.

Chase Offers Net-Settlement Plan

By JOHN EVANS

LONDON — Chase Manhattan Bank has launched a new service for its correspondent banks in Europe that it says will significantly reduce their exposure to settlement defaults.

The new service is a settlement system whereby banking debits and credits in U.S. dollars that normally require individual transfer payments are settled as a lump-sum net payment in a single transfer.

A Chase spokesman said the bank's service, ChaseNetting, will allow banks to significantly "reduce the size of their currency flows and their settlement requirements."

For example, a foreign bank that was owed $1.2 million and was paying out $1 million would receive a single net payment of $200,000 instead of having a total of $2.2 million in currency flows in both directions.

Regulators Were Worried

The system, based on bilateral netting, addresses the concerns of central banking regulators about systemic risks that could result in a major international crisis if a bank defaulted on a netting transaction, the Chase spokesman said.

The Federal Reserve Board and major European banks conducted an "extensive" review of Chase's netting service before it was launched, the bank spokesman said.

The Chase service, designed to handle U.S. dollar payments generated by banks in the European Community, was first tested with three European partners – Dresdner Bank and Westdeutsche Landesbank of Germany and Austria's Girozentrale. Eleven banks have now agreed to participate in the service, Chase said in an announcement.

Chase Is Largest Clearer

Chase said the service was developed from its experience as the world's largest dollar clearing bank, handling more than $316 billion in daily payments. It is designed to handle the rising volume of cross-border payments in U.S. currency, accepting all types of bank-to-bank transactions, including foreign exchange, money market, and commercial cover payments.

The bank says the new service for correspondents abroad will reduce exposure to defaults.

The bank hopes to launch the service in Canada and several Asian countries later this year, after passing the necessary regulatory reviews, the spokesman said.

Meanwhile, FXNET, a banking consortium specializing in foreign exchange netting transactions, has circulated internal data to members saying major savings are being made with its service.

FXNET member banks, routinely transacting up to 175 currency deals in U.S. dollars daily in London, are reducing the average number of their outgoing payments by 92%, to six from 75 individual transactions.

This is equivalent to a cut to $187.5 million a day, from $750 million.

Compression Substantial

The average reduction in payments across the whole system, in currencies such as the British pound, Japanese yen and German mark, is between 50% and 60% daily, FXNET data shows.

According to Peter Bartko, a Chemical Bank executive who is chairman of FXNET, these reductions are worth up to $250,000 in annual savings to member banks, with cost cuts realized through fewer payments through the Swift interbank transaction networks as well as reduced costs in the banks' own back offices.

London-based FXNET has 15 U.S. and European member banks. Five more banks are waiting to join. □

Japanese Banks Lead in Backing U.S. Municipals

By TERENCE M. SMITH
Global Guaranty

NEW YORK — Japanese banks in 1989 were the leading issuers of letters of credit for U.S. municipal securities, according to a Global Guaranty survey.

Four Japanese banks accounted for 41% of the more than $12 billion in U.S. municipal securities backed by letters of credit. Sixteen of the top 25 banks were from outside the United States, including ten from Japan.

Foreign banks are the leading issuers of letters of credit for U.S. municipal securities because their letters typically carry higher credit ratings than those of their U.S. counterparts.

Municipalities prefer to use the highest-rated letters because it allows them to issue debt at lower interest rates.

Marine Midland Capital Markets Inc., ranked fifth, Citicorp Securities Markets Inc., ranked seventh, and Morgan Guaranty, ranked ninth, were the leading U.S. bank letter issuers last year.

Bidding Battle In Texas Shifts To Weak Thrifts

By BARBARA A. REHM

The reshaping of Texas banking continued last week as two large out-of-state companies vied for one of the state's most attractive retail franchises. In the end, Banc One beat out NCNB for Dallas-based Bright Banc Savings Association.

Now the two aggressive acquirers are expected to turn their bargain-hunting further south, to the $2 billion-asset San Antonio Savings Association.

Banc One Corp., which is based in Columbus, Ohio, and NCNB Corp., based in Charlotte, N.C., are pursuing the same strategy in Texas. Each acquired a large failing commercial bank with government funds – Banc One bought MCorp last summer and NCNB bought First RepublicBank Corp. in 1988.

ANALYSIS
Follow-up on the news

Now each bank is scrambling to acquire broke S&Ls to fill out their franchises.

On Friday, the government's Resolution Trust Corp. sold Bright Banc's $2.7 billion in deposits to Banc One for $45 million. Banc One also acquired $1.7 billion of performing assets.

Keeping Out the Competition

Most analysts speculated that regulators rejected NCNB's bid, not because it was too low, but because NCNB already controls a large chunk of the Dallas deposit market. These analysts said NCNB certainly could have afforded the $45 million price tag and would have wanted to keep Banc One out.

"NCNB is going to bid on everything, not that it needs anything, but to keep the competition out," said Frank Anderson, a senior analyst with Stephens Inc., a brokerage company in Little Rock, Ark.

NCNB has acquired five thrifts in the state. In its largest, the Oct. 13 acquisition of University Federal Savings Association, Houston, NCNB spent $129 million to buy $3.5 billion in deposits.

Mr. Anderson predicted in an interview Monday that both Banc One and NCNB will try to continue their expansions by buying San Antonio Savings, a $2.3 billion-asset thrift seized by the government in March 1989.

"San Antonio Savings would really propel one of these banks into that market," he said. "I think Banc One and NCNB will both be strong bidders."

Another likely shopper will be banking titan Citicorp, which has looked but not yet bought a

Bankers' Survey Disputes Need For Lifeline Law

By YVETTE D. KANTROW

NEW YORK — The Consumer Bankers Association Monday became the latest banking trade group to produce research challenging the need for a law requiring banks to cash checks for people who lack bank accounts.

As support grows on Capitol Hill for legislation that would require banks to provide low-cost services to the poor, the Consumer Bankers Association released a survey concluding that such a law would not necessarily benefit low-income people.

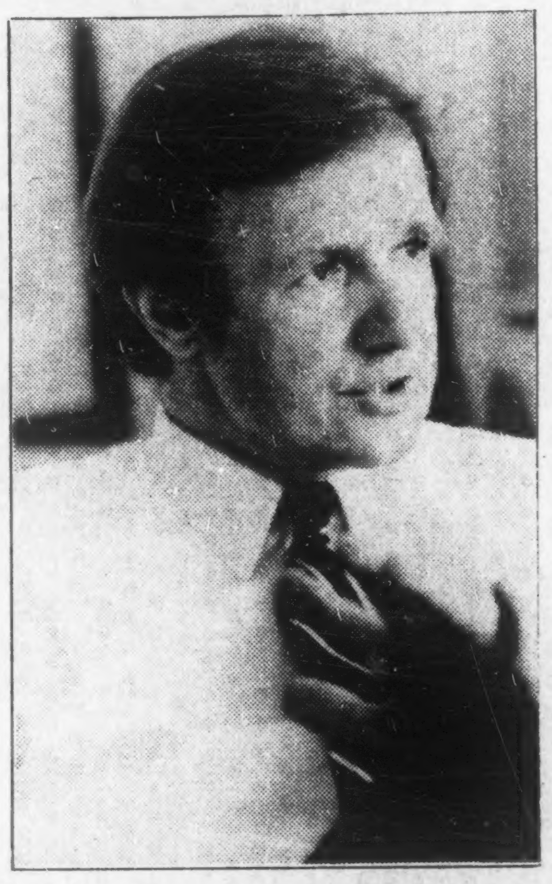
Riegle Opposes Efforts To Amend S&L Bailout

By ROBERT M. GARSSON



Donald W. Riegle
Senate Banking Chairman

WASHINGTON — Senate Banking Committee Chairman Donald W. Riegle said Monday that he opposes efforts to amend the 1989 thrift-bailout law this year, harming prospects for such legislation.

Speaking to a group of credit union executives, Mr. Riegle also said he sees "no enthusiasm among my colleagues" in the Senate for legislation ending that industry's tax advantages.

Referring to the bailout, the Michigan Democrat said: "Some people have asked, 'Should we go back and revisit the thrift legislation?'

"The answer to that is 'no.' We did a good job on that bill. It is necessary to give it time to work. I have no intention of opening it back up."

Avoiding Entanglement

Mr. Riegle is thought to be especially eager to avoid becoming embroiled in another messy thrift bill now – as the Senate Ethics Committee investigates whether he improperly intervened with federal regulators on behalf of Charles H. Keating Jr.'s failing Lincoln Savings and Loan Association.

House Banking Committee Chairman Henry B. Gonzalez, D-Tex., has said a modest S&L bill might be appropriate this year, and a number of key lawmakers are preparing legislation that would, among other things, dismantle the thrift regulatory structure.

But Mr. Riegle is in a commanding position to block a new S&L bill if he chooses, especially if it is not linked to a "must" piece of legislation, as was the case with last year's bailout. Moreover, Mr. Riegle's sentiment appears to be widely shared in the Senate.

Reacting to Mr. Riegle's com-

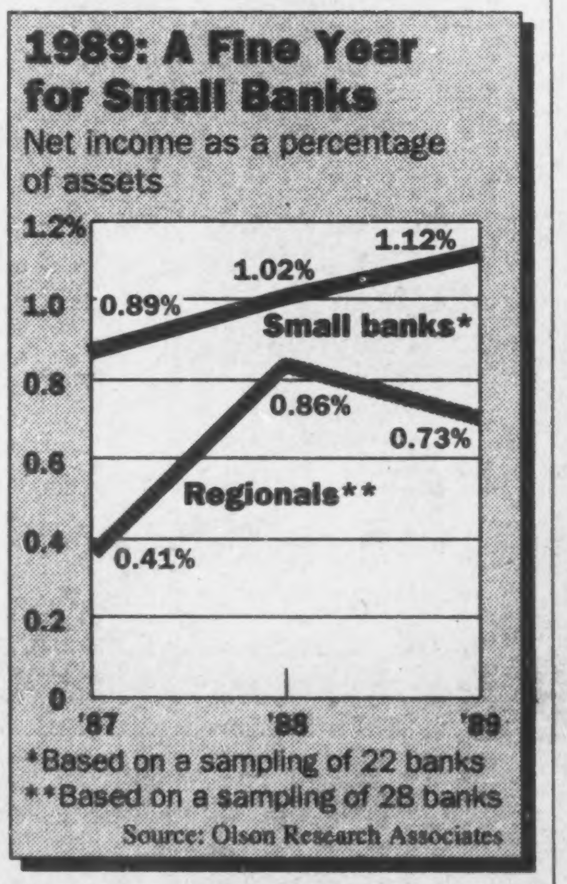
Mounting Loan-Loss Provisions Weaken Regional Bank Profits

By SANFORD ROSE

After rebounding sharply in 1988, the earnings of regional banks worsened appreciably in 1989. By contrast, small community banks registered a significant earnings improvement last year, continuing a positive trend that began in 1987.

These are the major findings of the annual survey of banks undertaken by Olson Research Associates of Greenbelt, Md. The survey encompasses 100 banks – 22 small, 50 midsize, and 28 with over $1 billion in assets. These institutions represent a cross-section of the industry and account for $131 billion in assets, or approximately 4% of all assets held by U.S. commercial banks.

While the small banks did well in 1989, the midsize institutions faltered slightly. But the worst troubles were encountered by those 28 regionals. Their 1989 return on assets fell 13 basis points, from 86 to 73 basis points. And their return on equity nosedived, from 14.37% to 11.83% – the second-worst declension in a decade.



1989: A Fine Year for Small Banks

Net income as a percentage of assets

*Based on a sampling of 22 banks
**Based on a sampling of 28 banks

Source: Olson Research Associates

Since the regionals dominate the Olson sample, holding $112.5 billion of the $131 billion in assets, the 1989 returns of the entire group of 100 banks also proved disappointing. ROA fell from 87 to 75 basis points. And ROE dropped from 13.97% to 11.74%.

The 28 regionals in the Olson

Banc One Gives Video Banking Another Whirl

By KAREN GULLO

NEW YORK — Banc One Corp. is giving video banking another shot.

The Columbus, Ohio, holding company, which failed at three earlier attempts to enter the video banking market, said last week that it will offer home banking services over the Prodigy network.

The move by one of the nation's most innovative retail banking organizations is likely to give a boost to Prodigy Services Co., a partnership of International Business Machines Corp. and Sears, Roebuck and Co. Prodigy claims that 200,000 computer owners nationwide subscribe to its information network, but results in the banking area have been mixed. Just last week, Sovran Financial Corp., Norfolk, Va., said that as of March 1 it would discontinue its Prodigy banking service in the Washington area, where it had 1,000 users.

Texas Banker Back in Fray And Upbeat About the '90s

By STEVE KLINKERMAN

DALLAS — After a decade of crisis, veteran Texas banker Robert H. Stewart 3d is hoping for a decade of fun.

The former chairman of InterFirst Corp. was named vice chairman Monday of Team Bank, Fort Worth, the $5 billion bank formed by the merger of Texas American Bancshares and Deposit Guaranty Bank, Dallas.

Robert H. Stewart 3d

The Team Bank post is a homecoming for Mr. Stewart, who is 64. He will be returning not only to the big leagues of Texas banking but also to the side of Ronald Steinhart, the former InterFirst president who is chairman and chief executive of Team Bank.

"I've had a great friendship with Ron," said Mr. Stewart, who recently resigned from LaSalle Energy Corp. after a two-year stint in which the Texas-based company's major assets were sold. The duo's roles will be reversed at Team Bank, however, where Mr. Stewart for the first time will be working for Mr. Steinhart.

Mr. Stewart's two years at LaSalle capped a tumultous decade in Texas.

After relinquishing the chairmanship of InterFirst to Elvis Mason in 1980, Mr. Stewart was thrust back into the post in 1984 after Mr. Mason's loans to oilfield service companies virtually crippled the company.

Mr. Stewart led InterFirst for four years, ultimately guiding it into a June 1987 merger with cross-town rival RepublicBank Corp. He resigned as chairman of First RepublicBank Corp., the merged entity, months before heavy losses and a deposit run forced it to ask for federal aid in early 1988.

Despite First Republic's troubles, Mr. Stewart didn't lose his appetite for banking. "Bob has put his life into the banking business," said Gene Bishop, a longtime friend and tennis partner who is chairman and chief executive of MCorp, Dallas. "He wanted to stay involved in the industry."

With Monday's announcement, Mr. Stewart's wish has been fulfilled. Drawing on his considerable Texas connections, he will seek customers for Team Bank. And he hopes to put an era of trouble to rest. "I'm just glad to be back," he said. ☐

Bank of New England Sells Credit Cards to Citicorp

NEW YORK — Bank of New England Corp. said Monday it completed the previously announced sale of its credit card business to Citicorp for $828 million.

The sale will result in a gain of about $176 million for the troubled Boston-based holding company. The premium of 27% for of Bank of New England's $652 million in credit card receivables is one of the highest ever paid in such a sale.

The card portfolio sale was part of program to divest $6 billion in assets, as outlined by Bank of New England last month. The company last week also announced the sale of its vehicle leasing subsidiary to a unit of GE Capital Corp. for an undisclosed price.

"Indications are that we can expect to report further progress in the coming weeks," said interim chairman H. Ridgely Bullock in a prepared statement.

— Jed Horowitz

BancTexas Fights Order To Capitalize Two Units

DALLAS — BancTexas Group Inc. said it applied to the U.S. District Court in Texas for an injunction to limit a temporary order by the Federal Reserve Bank, pending a formal hearing.

The Federal Reserve Bank had scheduled a hearing for March 20 to decide whether BancTexas should use all resources to inject capital into two banking subsidiaries. It also ordered BancTexas to infuse capital into those banks immediately.

The banking company said the Fed order is not upheld by legislation, adding that it believes the temporary action is premature and should be enjoined pending a hearing.

Gonzalez Urges President To Replace Wall Quickly

WASHINGTON — House Banking Committee Chairman Henry B. Gonzalez, complaining that M. Danny Wall continues to sit as the nation's top thrift regulator two months after his resignation, asked President Bush to name a successor immediately.

"Not only does Mr. Wall continue to direct the activities of OTS, but he sits as a voting member of the board of the Federal Deposit Insurance Corp.," Mr. Gonzalez said in his Feb. 2 letter.

He added that Mr. Wall's presence suggests an atmosphere of "business as usual" to "employees on the front line of regulation." ☐

Top Lending Officers Resign at First Bank

By NANINE ALEXANDER

NEW YORK — Less than a week after being named chairman and chief executive of First Bank System Inc., John G. Grundhofer announced Monday that three senior lending officers had resigned in a continuing restructuring designed to improve credit quality.

Though a spokesman for Minneapolis-based First Bank denied that the three were fired, analysts speculated that Mr. Grundhofer's hiring prompted their departure.

'It Makes Sense'

"If you look at his focus on credit quality," said Ben Crabtree, analyst at Dain Bosworth Inc., referring to Mr. Grundhofer, "it makes sense that he would bring in people he's more comfortable with."

The executives who resigned, effective Monday, are Richard W. Schoenke, chief credit and administrative officer; Jay B. Walters, president, commercial and investment banking; and Richard L. Shepley, executive vice president, credit policy.

Faced with mounting credit problems, First Bank last fall announced a major restructuring that included a $2 billion reduction in assets and firing nearly 20% of the staff.

Restructuring's Overseer

Mr. Grundhofer said that Darrell G. Knudson, vice chairman, will oversee the restructuring of First Bank's commercial and investment banking operations. The revamping is to include revisions of loan underwriting standards, continued cuts in commercial assets, evaluation of lender performance standards and compensation programs, and a review of internal lending limits.

Some analysts speculated that Mr. Grundhofer, who took office Wednesday, would hire executives from bottom-line-oriented Wells Fargo & Co., where he had been vice chairman, to help cut costs at First Bank. ☐

House Panel Asks CIA to Comment On Reported Link to S&L Failures

By BILL ATKINSON

WASHINGTON — Concerned about reports that the Central Intelligence Agency played a role in the failure of 22 savings and loans, Rep. Frank Annunzio, D-Ill., has requested to meet with CIA Director William H. Webster.

In a letter sent to Mr. Webster on Monday, Mr. Annunzio said that allegations in a *Houston Post* story are "serious and troubling." As chairman of the House Banking subcommittee on financial institutions, Mr. Annunzio requested that Mr. Webster appear before a closed meeting of the panel as soon as possible.

According to the *Post's* story, which was published Sunday, the CIA may have received fraudulent loans that contributed to the failure of 22 thrifts.

The story charged that the CIA used the loan proceeds to finance such covert operations as aid to the Nicaraguan contras, gun running, drug smuggling, and money laundering.

The newspaper also said it found links between the CIA and organized crime in the thrift fraud.

Clausen Says He Will Retire

By SAM ZUCKERMAN

SAN FRANCISCO — A.W. Clausen, 66, announced on Monday that he will retire as chairman and chief executive officer of BankAmerica Corp. at the bank company's annual meeting on May 24. He will be succeeded by 59-year-old vice chairman Richard M. Rosenberg, head of Bank of America's California banking group.

Both Mr. Clausen's retirement after more than three years in a second term as BankAmerica chief and Mr. Rosenberg's promotion to the company's top job had been widely expected. Following retirement, Mr. Clausen will remain on the boards of BankAmerica and its Bank of America subsidiary, serving as head of the executive committees of both panels.

Corrections

A Feb. 2 article ("Bankers Trust Continues to Clean House," page 11) incorrectly described a unit of BT Delaware closed by Bankers Trust New York Corp., its parent. The business, a domestic check-processing unit, employed 15 people. The company also denied speculation that it will reduce the size of its domestic cash management or private banking units.

■

A Jan. 25 article ("Las Vegas Bank: 16 ATM Network Links," page 6) incorrectly described how Valley Bank of Nevada established links with three midwestern automated teller machine networks – Magic Line, Shazam, and Tyme. The links were made through the San Diego-based Star System network. The bank originally stated – incorrectly – that it had agreed directly with the networks. ☐

COMMENT/*By Paul Nadler*

First of Maryland Keeps Its Irish Owners Smiling

The awards meeting of the First National Bank of Maryland offered several insights that should be of interest to other banks.

There was a predominance of women among the 1,200 award winners at the function – which was held at a posh Baltimore hotel, with all the trimmings, to make them feel special.

I was reminded that for the first decade or so that I taught at the Stonier Banking School of the American Bankers Association, not one of the 400 or so students was female. They were not considered important enough to attend this top officer training school. ("We never waste a man when a woman can do a job," was the way one Philadelphia banker responded in my presence as late as 1970 to a question about discrimination against women.)

Irish Owners Don't Meddle

Although First of Maryland is wholly owned by Allied Irish Bank, this fact has meant virtually nothing in the operation of the bank and in the thoughts of the attendees I talked to.

Out of 4,000 employees, there are only four from Ireland – two top officers and two foreign exchange people. But the only recognition given to chairman Jerry Casey, the top Dublin representative in the bank, was a 50th birthday present of a bunch of carrots (since Bugs Bunny also will be 50 this year).

The rest of the meeting was conducted by Joseph Cole Jr., chief executive officer. He is a Maryland native who has been with First of Maryland for more than a quarter of a century. In fact, the people at the meeting felt that being fully owned by the Irish was great, because it alleviated the fear of unfriendly raids. The shoe had already dropped, and it didn't hurt at all.

Ambassador and Auditor

To be sure, Dublin likes growth in profits. But as long as First of Maryland provides that, Mr. Casey feels his role is to be "an ambassador and an auditor, wrapped into one." He is quick to stress that Mr. Cole and his staff of five executive vice presidents – all of whom also have about 25 years with the bank – run the institution.

But what was more interesting than the bank's structure were the questions raised when I ran a morning seminar for 50 people ranging from trainees to top line people. The "hot button" that most interested them was the suggestion that each teller make two calls every evening to thank people who had come into the bank that day.

Although the attendees felt that banks have very little contact with customers and that these so-called warm calls offer a lot of value over cold calls that often bother people, they feared the interruption of people's dinner and evenings might hurt the bank's image. We agreed, finally, that the opening sentence of any such warm call should be "Is this a good time, or should I call later?"

Are Mea Culpas Necessary?

Equally interesting was the question "If our bank makes a mistake, should we admit it?"

This got me screaming a violent "Yes!" In banking, while customers accept occasional errors, the point most of them make in surveys is that they hate it most when a lot of effort is required to get the errors corrected. This applies to small customers as well as corporate treasurers with giant balances.

The main point that came out is that when an organization or individual makes an error and admits it and tries to correct it, frequently in the end there is a closer tie between the organization and the customer than if the error not been made in the first place.

Compare AT&T with Audi. When AT&T had a computer glitch last month, it apologized. The company said it was embarrassed, would make amends through lower rates on Feb. 14, and would strive to be better.

In our discussion, executive vice president Joe Peters hit the nail on the head when he said the one answer customers will not stand for when an error has been committed is, "The computer broke." "Nonsense," he said. "We are responsible for the computer too."

When there were reports that its cars suddenly lurched forward, Audi took the other approach and said, "Americans just don't know how to drive" – a statement that cost it a giant share of its market in the United States.

Federal Express Dropped Ball

Federal Express lost the package with Westinghouse Scholar applications from Stuyvesant High School in New York and students missed the deadline after years of work. The company had an opportunity to say it would pay for all the scholarships won by applications in the package that got lost, if Westinghouse would only process them like the others despite their late arrival. Such a step would have turned an operational snafu into a public relations coup at minor cost.

So there we were in Baltimore, honoring 1,200 people, printing the names of about 700 who had perfect attendance records, and talking about errors, nonobtrusive calls, and most important, quality of service. Maybe that is why the bank does so well and why the Irish owners are so happy leaving them alone. ☐

Mr. Nadler is professor of finance at Rutgers University's Graduate School of Management.

CRIME BLOTTER/*By Tom Leander*

Judge Orders Felon To Get Rich Quick

In what the Federal Deposit Insurance Corp. is calling the largest restitution award ever in a loan-fraud case, a federal judge has ordered Jerry D. Smith to repay $13 million he wrongfully took from Queen City Savings and Loan Association, Seattle.

And the judge expressed confidence in Mr. Smith's ability to raise the money. Once Mr. Smith finishes serving 10 years in prison for loan fraud, Judge John C. Coughenour has given him only five years him to repay the $13 million.

The judge's order acknowledges that Mr. Smith "may not currently possess significant assets," but notes, "he has demonstrated the ability to accumulate assets in the amount of this restitution order within five years from his release from custody." Mr. Smith was sentenced without parole.

Mr. Smith was not an officer or director of the Seattle thrift, but owned a substantial portion of Queen City stock, according to Jack D. Smith, deputy general counsel at the FDIC. Jerry Smith was convicted of arranging $16 million in fraudulent loans in Texas with coconspirators at Queen City in 1988.

Losses on these loans led to the collapse of Queen City and its seizure by regulators. The former Federal Savings and Loan Insurance Corp. sold the thrift's assets to Gibraltar Savings and Loan Association, another Seattle thrift seized last year by regulators.

The restitution ruling allows the FDIC to search for assets that Mr. Smith may have hidden.

"It is our belief that Jerry Smith has funds that are secreted and that would amount to substantial recovery," said the deputy general counsel.

Background Checks Keep Agency Busy

International private banks are stepping up efforts to investigate financial backgrounds of potential clients, according to the head of one of the largest private-detective companies in the United States.

James Mintz, president of the Investigative Group Inc., reports a flood of requests for background checks that has grown steadily since late last year.

Mr. Mintz attributes the rise to an increased determination to suppress money laundering and drug trafficking in this country. He also cited a letter issued by the Bank of England in November, warning banks that they must install adequate controls to prevent money laundering.

The Investigative Group has offices in London and in New York and four other U.S. cities.

* * *

Bank Heist Suspect Returned to Scene

Police in Brooklyn, N.Y., nabbed a panhandler who allegedly held up First Federal Savings Bank, then resumed his customary curbside begging post outside the bank.

Peter Nuzzi, 30, is charged with walking into the thrift on Flatbush Avenue, leaping over a teller counter, and scooping an undisclosed amount of cash from a open drawer. Mr. Nuzzi claimed that he was armed, according to New York City police officer Joseph Gallagher.

Two days later, several bank employees observed Mr. Nuzzi return to his customary panhandling spot in front of the thrift. They identified him to police, who charged him with bank robbery and possession of a deadly weapon.

Connecticut National Indictment Dropped

A money-laundering indictment against Connecticut National Bank has been dismissed because prosecutors waited too long to bring the charges, a federal judge ruled.

Connecticut National, a unit of Boston-based Shawmut National Corp., was indicted last November of failing to file currency transaction reports on deposits made by two brothers from Milford, Conn., who jointly own a restaurant chain.

Judge Warren Eginton, in Bridgeport, Conn., tossed out the indictment when prosecutor John Durham conceded that the charges were brought after the five-year statute of limitations on money-laundering prosecutions had run out.

The prosecutor said he plans to seek another indictment from a federal grand jury on similar, but more recent, money-laundering charges within the five-year limit. ☐

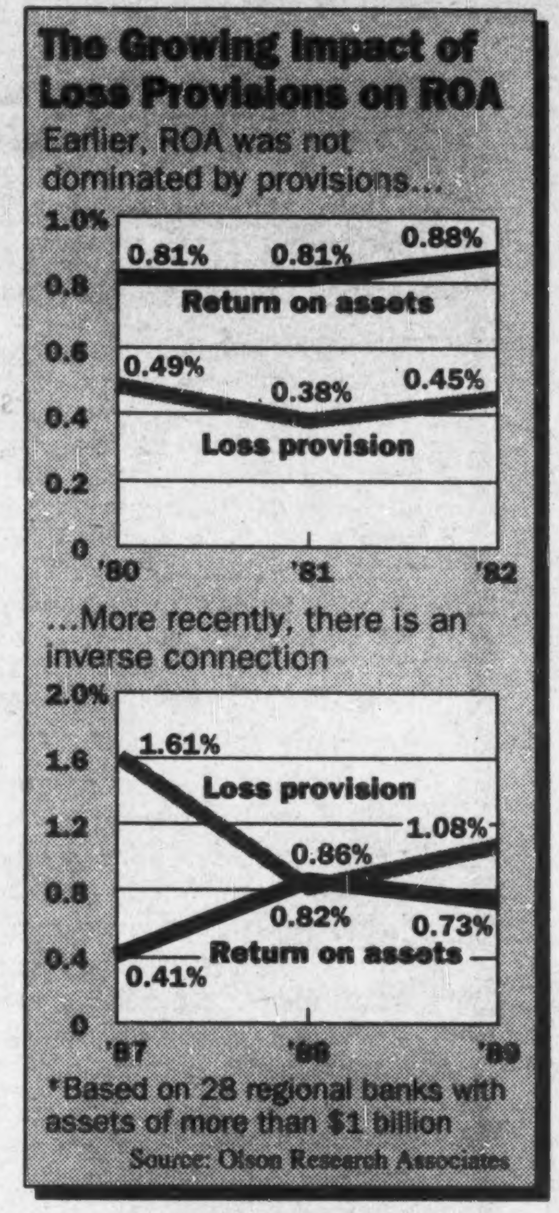
Mounting Loss Provisions Sap Regional Profits

Continued from *page* **1**

sample were saddled with a variety of problems last year. On average, interest rates rose during 1989, increasing both the asset yield and the cost of funds. But for these institutions, the cost of funds rose by more than did the asset yield – 106 basis points versus 94 basis points. So the banking spread dropped.

The concomitant fall in the banking margin – interest revenue minus interest expense as a percent of earning assets – was to some extent blunted by the increased use of equity funds, which of course bear no explicit interest cost. Nevertheless, the regional-bank margin still fell slightly, exerting downward pressure on the ROA. And because these banks were using more equity money and were therefore deleveraging, the lower ROA translated into an even sharper drop in the ROE.



*Based on 28 regional banks with assets of more than $1 billion

Source: Olson Research Associates

Additionally, the regionals were not able to make progress in reducing the overhead burden, defined as noninterest expenses minus noninterest revenue as a percent of earning assets. Indeed, the net overhead ratio actually inched up last year, reflecting both the rise in expenses and an apparent loss of momentum in generating noninterest revenue.

Overstated Earnings

But by far the most significant factor in the 1989 earnings equation was the behavior of the loan-loss provision. A good deal of the 1988 recovery in earnings at regional banks was attributable to a sharp reduction in the loan-loss provision. In 1988, these banks virtually halved the provision, dropping it from 1.61% to only 0.82% of loans.

However, in their zeal to show higher profits in 1988 after a dismal 1987 showing, the regionals apparently went too far. They overcut the provision, in effect overstating 1988 earnings at the expense of profits in future years.

In 1989, these banks had to reverse themselves and once again fatten the loss provision. Had they not done so, the rapid growth in 1989 loans would have caused an unacceptably large decline in the ratio of loss reserves to loans.

Last year, the regionals allocated 6.5 cents of every dollar of income to the provision, compared to only 5.3 cents in 1988. In absolute dollars, they earmarked around $260 million more to the provision than in 1988. If the regionals had been able to forgo this increase, their aftertax ROA would have gone up by around 3 basis points in 1989 instead of falling by 13 basis points.

Counterintuitive Finding

For the 22 banks in the Olson sample with assets of under $100 million, last year's results were quite a bit more encouraging. ROA rose 10 basis points, to 1.12%, while ROE, despite a modest deleveraging, moved from 11.22% to 12.19%.

These community institutions experienced some compression in their spreads, but less than at the bigger banks – a result that is somewhat counterintuitive since community banks are supposed to be more liability sensitive than bigger banks and therefore more prone to be hurt by rising interest rates.

Since the fall in the spread was comparatively modest, given that these banks also employed relatively more equity money to fund their assets in 1989 than in 1988, their margin rose a tad, slightly buoying the ROA. Unlike the regionals, the community institutions were able to pare the net overhead ratio, which fell from 2.61% to 2.55% of earning assets. And also unlike the regionals, the tiny institutions found it possible to continue reducing the loan-loss provision, which dropped from 3.4 cents per dollar of income to 2.6 cents.

> **The most significant factor in the 1989 earnings equation was the behavior of the loan-loss provision.**

Muted Growth

Whether the reduction in the provision is sustainable is, however, subject to question. The community institutions were able to reduce the provision largely because their loan growth in 1989 was much less rapid than at regional institutions. So while the decline in the provision lowered the ratio of reserves to loans, it did not lower it by an unacceptable amount. On the other hand, loan chargeoffs at community banks were rising in 1989, as was the nonperformer ratio.

Unless these adverse credit trends are quickly reversed, the small banks may soon be required to beef up the provision, even if loan growth remains comparatively muted.

As of now, however, the community banks seem in better shape than they have been for a long time. At 1.12%, their ROA is higher than it has been since 1982 and higher than that recorded by the regionals in any year in the last decade.

Decade of Decline

Since 1989 represents the end of a decade, it is useful to compare the current condition of banks with that which prevailed at the start of the '80s. The average bank in the Olson sample of small and regional institutions is now much worse off than it was in 1980. Both its ROE and ROA have dropped.

But the decline has not been monotonic. Bank returns generally improved in the early '80s before faltering in 1983, as the effects of the last recession began to be felt. Returns perked up in the mid-'80s. But by the late '80s, profitability once again turned down, this time undoubtedly because of the effects of the disinflation that followed the recession and began to devastate the fortunes of real estate, energy, and agricultural borrowers.

Significantly, the impact of the decline in the relative prices of land and oil was much more deleterious to banks than that of recession itself. Bank fortunes reached a nadir in 1987, when the loss provision had to be raised by over 50% and, in consequence, the bank ROA tumbled from 87 to 47 basis points.

Banks recovered sharply in 1988, but, as noted, this recovery was in some sense illusory since it was achieved by a massive decline in the loan-loss provision that has thus far proved unsustainable. Banks might have been better off if they had reduced the provision more gradually in 1988 than was in fact the case.

. Higher Spread, Lower Margin

The average bank now earns a much higher spread than it made in 1980. This is largely because of the shift in asset allocation from low-yielding securities to much higher-yielding loans. The ratio of loans to assets has increased from 66.5% at the beginning of the decade to 73% currently. While serving to bolster the spread, the shift from securities to loans has had the unfortunate side effect of promoting a secularly higher level of chargeoffs and a significant rise in the ratio of nonperforming assets.

Moreover, despite the rise in banking spread, the banking margin has fallen inexorably, from 5.03% in 1980 to around 4.40% at present. This slippage is, of course, almost entirely due to the erosion in noninterest-bearing demand deposits.

Banks have striven to offset the effects of reduced margins in part by paring noninterest expenses and also by reaching for higher levels of noninterest revenue. In 1980, the net overhead burden amounted to 2.72% of earning assets. It has since fallen to 2.22%. However, most of the progress in reducing net overhead was achieved in the early to mid-'80s. Since 1987, the overhead burden has remained virtually constant.

To be sure, banks are today better capitalized and much more heavily reserved than they were in 1980. Given the higher ratio of loans to assets and the increase in borrowed funds, they are also much less liquid. And should the economy falter, the fact that banks are so heavily loaned up may well lead to a further explosion in chargeoff ratios from levels that are still more than 50% higher than they were at the beginning of the '80s. □

Hearings to Resume on Lincoln S&L

WASHINGTON — House Banking Committee chairman Henry B. Gonzalez plans to resume hearings this month on the failure of Lincoln Savings and Loan Association, Irvine, Calif.

Although the committee has not made a formal announcement, staff sources said the public inquiry into the American Continental Corp. subsidiary will probably pick up again during the third week of the month.

Mr. Gonzalez plans to take a look at the role played by junk bond financing in the failure of the thrift, and he has subpoenaed junk bond king Michael Milken.

Mr. Gonzalez will probably also examine other failed thrifts, including Denver-based Silverado Banking, Savings and Loan Association, an institution notable in part because President Bush's son Neil sat on the board of directors.

The Office of Thrift Supervision has accused Neil Bush of a conflict of interest in voting on a loan to a business associate. He has refused to sign an agreement to settle the case. □

Riegle Opposes Efforts to Amend S&L-Bailout Bill

Continued from *page* **1**

ments, Rep. Jim Leach, R-Iowa, conceded that new S&L legislation is unlikely to pass unless it can be attached to a needed money bill, such as legislation authorizing working capital for the Resolution Trust Corp. "Sen. Riegle's statement is pretty significant," he said.

Mr. Leach said he plans to offer a bill disbanding the Office of Thrift Supervision and moving its regulatory functions into the three federal bank supervisory agencies.

Taxing Credit Unions

Mr. Riegle said that taxing credit unions could be counterproductive since it might encourage them to return a greater share of profits to members by paying higher interest on deposits and charging less for loans. He sits on the Senate Finance Committee, which has jurisdiction over tax matters.

He told the Credit Union National Association's annual governmental affairs conference that Congress is not likely to consider merging the credit union industry's share insurance fund into the bank and thrift funds.

"It's not even being seriously considered on Capitol Hill," he said, "so it's not even a live issue, much less a threat." □

HEARD THE ONE ABOUT THE BANKER

WHO LENT TO THE MOVIE BUSINESS?

As a matter of fact, we have. That banker is lending to a counter-cyclical industry which is America's second biggest exporter. Its customer base, revenues, and creditworthiness have been expanding since 1977. Its project loans are characterized by fat spreads and full collateral coverage of principal and interest. Entertainment departments at major banks regularly turn in the biggest profits for their institutions.

So, what's the punchline? Just this: maybe it's time to get serious about the entertainment industry. If you agree, give us a call. We're consultants who help banks expand or establish their lending in this special niche.

Banc One to Offer Prodigy Service

Continued from *page* **1**

Citizens and Southern Corp., Atlanta, which has a merger pending with Sovran, pulled out of Prodigy last year.

But several large retail banks, including Manufacturers Hanover Trust Co. in New York, Wells Fargo Bank in California, Philadelphia National Bank, and now Banc One Corp., do participate in Prodigy.

Prodigy estimates that 60,000 homes in the Columbus, Ohio, area have personal computers and can use Prodigy to obtain banking, travel reservations, shopping, and other information services by the interactive method known as videotex.

Of those subscribers, 10,000 are potential Prodigy subscribers, according to John Russell, vice president and head of corporate communications at Banc One. He expects 3,000 to 4,000 will use Prodigy for home banking.

"It will take years before there's critical mass," said Mr. Russell. "It's not a program that will move market share, but customers will come to expect it."

Three False Starts

This is Banc One's fourth foray into video banking after three unsuccessful attempts in the late 1970s and 1980s.

"A single bank couldn't effectively operate a home banking service – it was too expensive and required too much overhead," Mr. Russell said. "We need a national system that you take part in but don't suppport."

In one of its earlier attempts to promote home banking, Banc One joined with several other holding companies in VideoFinancial Services, a transaction-processing company that failed to generate significant volume.

Mr. Russell believes that home banking will succeed in the long run if it is marketed under a broad umbrella like Prodigy, which provides a variety of videotex services to the mass market and is supported by the giants of the computer and retailing industries, IBM and Sears.

First Through Flagship

Banc One will first offer the service through its flagship subsidiary, Bank One Columbus, and then roll it out to other units.

Thirteen other banks, including Wells Fargo, Manufacturers Hanover, Midlantic National Bank, and Bank of New England, have signed agreements to use the Prodigy network for home banking services, according to Thomas Ponosuk, program manager for banking services at Prodigy.

He declined to speculate how many of the current 200,000 Prodigy subscribers are using the system for home banking, but said that according to market research, consumers rank home banking and shopping among the most desirable features.

"The interest in home banking is literally exploding here," said Michael Cuccinelli, senior vice president and cashier at NBD Woodfield Bank, Schaumburg, Ill. The bank is one of 8 NBD Bancorp subsidiaries in Illinois now offering home banking over the Prodigy network. NBD is the parent of National Bank of Detroit, which is also on the Prodigy roster.

Mr. Cuccinelli said he has 200 customers for the service, which became available last September. ☐

Freddie Mac Mutual Fund Soars Abroad

By PHIL ROOSEVELT

NEW YORK — Investors in the Far East and Europe have pumped $531 million into a fund that will buy mortgage securities of the Federal Home Loan Mortgage Corp., the agency said last week.

The fund, advised by a unit of the Blackstone Group, is the latest sign of increased overseas demand for U.S. mortgage securities. Foreign investors and other new buyers are considered critical for the stability of the market, which faces heavy selling by capital-short thrifts.

The fund, rumored since last fall, is similar to three that were set up last year to invest in securities of the Federal National Mortgage Association. Those three were sold mainly to investors in Japan.

Freddie Mac declared its fund to be "the first mortgage fund ever sold globally to institutional investors rather than targeted to investors in Japan."

Response from Six Countries

The agency said that 27 institutional investors in six countries have invested in the new fund. Salomon Brothers Inc. served as managing placement agent, and a unit of Salomon is strategic adviser to the Blackstone unit.

Overseas investment in the mortgage-backed securities market, though growing, remains very small, experts said. They explain that many overseas investors are uncomfortable with the instruments' unusual payment chacteristics.

Mutual funds such as the new one are thought to be more palatable to overseas investors than direct investment.

The Freddie Mac fund "is helping to attract a solid and lasting investor base around the world for our high-quality securities," Leland C. Brendsel, Freddie Mac's chairman and chief executive, said on Thursday.

Laurence D. Fink, chairman and chief executive of Blackstone Financial Management Inc., added, "The successs of the fund offering evidences a growing interest within the international investment community in the U.S. mortgage market." ☐

Survey for CBA Challenges Need for Lifeline Banking

Continued from *page* **1**

The association commissioned the Roper Organization, New York, to survey people who use check-cashing outlets instead of banks. More than two-thirds of them have relationships with financial institutions, the survey found, but willingly pay more for what they perceive as the convenience of check-cashing stores.

Therefore, the association said, low-income consumers are not victimized by price-gouging check cashers, as some legislators have claimed. These lawmakers are pushing a bill that would require banks to cash government checks at no charge to all comers.

"What we wanted to do and what we have done is to dispel some of the myths that check-cashing stores exist because banks have forced people out of their lobbies with high fees," said Joe Belew, president of the Arlington, Va.-based CBA.

Of 505 customers of check-cashing outlets in the CBA-Roper survey, 57% said they know they pay more for check-cashing services than they would or do pay to maintain a bank account. But more convenient hours and locations attract them.

Willing to Pay

In the CBA survey, 31% of the check-cashing services' customers said they had no bank account. And 31% of that group said they lacked money to maintain accounts; only 10% said banks "cheat" them with too many service charges.

Mr. Belew said the latter finding rebuts legislators' claims that consumer banking laws are needed because low- to moderate-income people can no longer afford banking services.

Roper did the survey last fall in Washington, New York, Miami, Chicago, and Los Angeles.

Consumer Advocates' Vow

The findings were released on the heels of a vow made in January by Sen. Howard Metzenbaum, D-Ohio, and the Consumer Federation of America. They promised an unprecedented effort to get Congress to require low-cost bank accounts and government check-cashing privileges for the poor.

The American Bankers Association has said that low-cost bank accounts are already available from 70% of banks in metropolitan areas – where most of the demand for such lifeline services would arise.

A spokesman for Sen. Metzenbaum said he would have no comment until he had reviewed the CBA survey. ☐

Bankers Given Better News on Debt Guideline

By JOHN FORDE

NEW YORK — Although setting an accounting standard to mark certain debt investments to their market value is far from done, bankers are warily optimistic about news they're hearing from a key accounting group.

Based on early reports, the new guidelines will allow banks to hold debt securities at market value if they are likely to hold them for at least one year. The standard will also remove a test of bank intentions based on sales within the investment portfolio.

"It looks like a slight improvement, but it's still very unclear, and we won't know what it really means until the final rules come out for comment," said a controller at a major southeastern bank.

ANALYSIS
Follow-up on the news

"It would seem a little more beneficial for the banks [than earlier drafts], but it could still have an impact," said Martin Baumann, a partner at Price Waterhouse & Co.

Threat to Long Bonds

Bankers and others had worried that the accounting rule could cause banks to jettison their long-term investment portfolios in favor of shorter-term securities. Such a switch would have serious implications, including making it more difficult for the Treasury to fund the deficit. Banks are major investors in long-term government debt.

The latest version of the guideline, called "Reporting by Financial Institutions of Debt Securities Held as Assets," was drafted after a sometimes stormy meeting several weeks ago of the Accounting Standards Executive Committee of the American Institute of Certified Public Accountants.

"Spirited debate" punctuated the meeting, said John L. Kreischer, committee chairman. However, the panel finally agreed by 14 to 1, with one abstention, to accept the new standard.

Bankers Still Opposed

Despite the improvements, from their standpoint, many bankers and others still oppose the guidance. Instead, they favor increased disclosure of the yields and maturities in investment portfolios, as well as of bank activities in selling these securities. The Securities and Exchange Commission has focused on improving disclosure of these activities in annual reports.

Thrift Deposits Dip Again, But Industry Gains Capital

By BILL ATKINSON

WASHINGTON — Deposits continued to drain out of the thrift industry in November, regulators said Tuesday, but, in one bright note, there was a modest increase in capital for the first time in nine months.

Net deposit outflows at thrifts not under government conservatorship narrowed to $2.7 billion, the Office of Thrift Supervision said, marking the 11th straight month of outflows. Analysts said that no end to the deposit runoff was in sight.

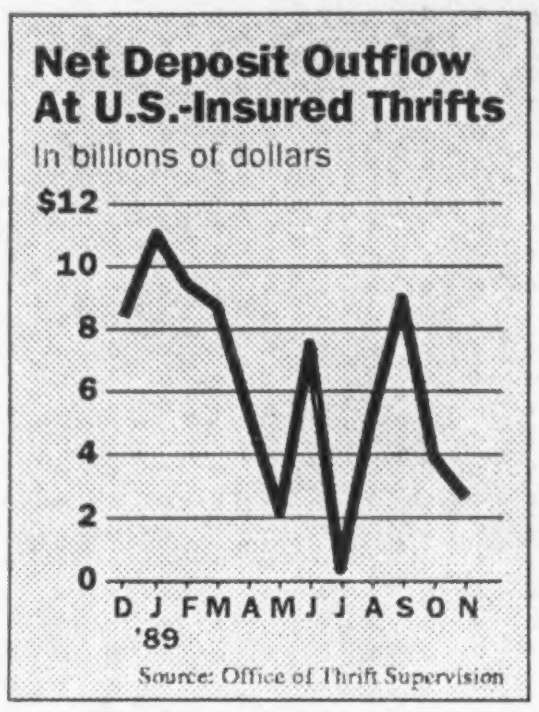
The outflow compares with a $3.9 billion decrease in October and $7 billion a year earlier.

The 275 thrifts under government control had a net deposit loss of $2.2 billion in November, down from $2.5 billion in October.

Many S&Ls are selling assets and deposits to shrink their business and raise capital in an effort to meet stringent capital requirements imposed by the thrift-bailout law.

In a sign that that strategy is working, the industry recorded a $167 million increase in capital in November, the first increase since February, when there was a $144 million gain. In the first 11 months of the year, the industry lost $14.3 billion in capital.

While the net deposit outflows appear to be declining, they will undoubtedly continue, said James Barth, former chief economist of OTS.



Net Deposit Outflow At U.S.-Insured Thrifts

Source: Office of Thrift Supervision

"We could see billions of dollars shed by institutions," said Mr. Barth, who now teaches at Auburn. "It is not likely to discontinue anytime soon. There are too many assets and deposits at these institutions and not sufficient capital."

Mr. Barth said he is concerned that many S&Ls will shed prime assets, such as core deposits and branches. "In many cases, those are the only sources of value at the new institution," he said. "As they have to get rid of their best assets first, some of the bloody institutions are going to be hurting themselves."

"When the confidence in the thrift industry is restored, peo-

U.S. Ruling Puts a Dent In Capital Of Citicorp

By TERENCE M. SMITH
and JED HOROWITZ

NEW YORK — Federal regulators are requiring Citicorp to boost the amount of capital supporting its municipal bond insurer, AMBAC Indemnity Corp.

Sources said the ruling could force Citicorp to dedicate an additional $600 million in capital to support the unit or be forced to divest it.

Citicorp currently has enough extra capital to cover that amount. But it now has to decide if it wants to use that capital for AMBAC at a time when its cushion against loan losses and other problems is thin.

Citicorp said it was unaware of the ruling and therefore had no comment.

In letters released Wednesday by U.S. Sen. Steve Symms, R-Idaho, the Comptroller of the Currency said the assets of AMBAC must be consolidated onto Citibank's balance sheet when computing its risk-based capital guidelines. The new rules will require bank companies for the first time to reserve against off-balance-sheet risk in the

Lenders Cut Their Losses on LDC Credits

By JAMES R. KRAUS

NEW YORK — After spending nearly a decade futilely trying to get their money back, major U.S. banks are selling their sour Third World loans at steep losses in order to put the problem behind them.

In the past 36 months, 17 leading U.S. banks have reduced their Third World loan exposures by 31% to $50.7 billion from $73.5 billion, according to Keefe, Bruyette & Woods Inc. Bankers and analysts said the remaining debt will be reduced over the next several years.

"The banks don't like [Third World] borrowers, they don't like the business, and they've decided to get out. They've decided that holding these assets impinges on their market value and have washed their hands of the mess," said Lawrence W. Cohn, a banking analyst with Drexel Burnham Lambert Inc.

To be sure, U.S. banks are paying a hefty price to put their Third World nightmares behind them. They are selling their Third World loans at discounts of 50% to 90%, meaning they are losing anywhere from 50 cents to 90 cents on every dollar loaned out.

But the loan sales actually boost earnings, because banks can claim the losses as deductions on the taxes they pay on their profits. These tax breaks allowed the Bank of America to earn record profits last year, according to Peter McPherson, senior vice president and director of debt restructuring.

The San Francisco-based bank sold $1.4 billion in Third World loans last year, but reported record annual earnings of $1.1 billion.

Among the most aggressive sellers are of Third World loans in the past 36 months are Citicorp, which sold $3.5 billion; BankAmerica, $2.8 billion; Chase Manhattan Corp., $2.2 billion; First Chicago Corp. and

Antoci Directs American To Top Profits Among S&Ls

By PHIL ROOSEVELT

As chairman and chief executive officer of the once-troubled American Savings Bank, Mario J. Antoci says he is working longer, harder hours than ever before in his career.

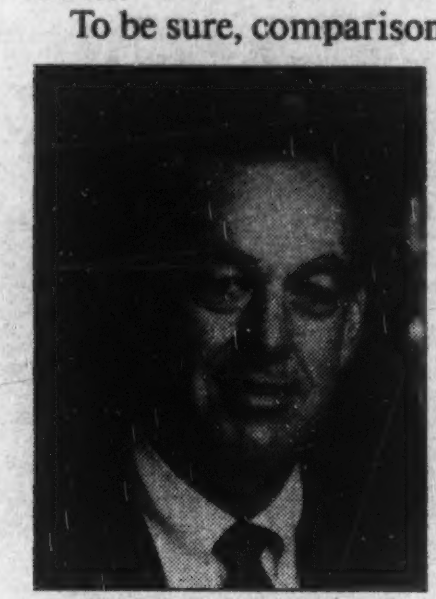
"But I'm loving it," he says. "We've had a lot of fun this year."

Make that fun *and* profits. The Stockton, Calif., thrift, acquired by the Robert M. Bass Group about a year ago, recently reported eye-popping earnings of $214 million for 1989 – more than any thrift in the country.

It beat the $193.9 million reported last month by H.F. Ahmanson & Co., the parent of Home Savings of America, the nation's largest thrift.

To be sure, comparisons with other thrifts are somewhat misleading. Mr. Antoci, 55, noted in an interview that the $214 million does not reflect taxes. Under terms of the Bass acquisition, the thrift pays no taxes, but rather funnels to the government, from retained earnings, about 75% of what it ordinarily would pay in taxes.

Also, the $16.3 billion-asset thrift – the so-called "good bank" of the now-defunct American Savings and Loan Association – derives substantial income from an $8 billion loan to the related "bad bank," New West Federal Savings and Loan Association. American's profits also reflected some nonrecurring gains from the sale of loans and securities.



Mario J. Antoci

Nonetheless, American has made indisputable progress under Mr. Antoci, who came to the post in December 1988 from the presidency of Los Angeles-based H.F. Ahmanson.

Considered one of the leading authorities on adjustable-rate mortgages, he cranked up American's mortgage originations by about 45% last year, to $2.9 billion. And a further jump to $5 billion is planned this year, Mr. Antoci said.

More important, Mr. Antoci has switched the type of adjustable favored by the thrift to one with a rate that adjusts every month instead of every six months.

"The six-month loan is just wrong for someone who wants to lock in a profitable spread," he said. "You take basis risk when you only adjust every six months."

At the same time, Mr. Antoci has attacked American's cost structure, which he said became bloated as a result of a 1983 merger. General and administrative expenses have declined to 1.7% of assets from 2.2% a year ago, even as the thrift extended its week to offer Saturday banking.

Working with two consulting firms, Mr. Antoci and his team "took a very extensive look at how we run this company from every facet," he said. "And because we had a new management team, no egos were bruised when someone said we should change the way we're doing something. All of us were flexible and willing to change." ☐

NEWS *briefs*

First Fidelity's Terracciano Aims to Boost Productivity

PHILADELPHIA — First Fidelity Bancorp chief executive Anthony Terracciano said he would take quick action to boost productivity and returns at the regional bank company.

Mr. Terracciano, who became chairman on Feb.1, told a news conference that he would focus on improving First Fidelity's asset quality, productivity, and business mix "and the pace with which we come to grips with these issues will be rapid."

Chase Securities Lays Off 11 During Restructuring

NEW YORK — Chase Manhattan Corp. said its fixed-income securities unit has laid off 11 employees. Chase Securities Inc., which underwrites, trades, and distributes corporate and government debt instruments, has over 200 employees, a Chase spokesman said.

No single area was targeted for the layoffs, which included personnel in sales, repurchase agreements, and trading. All the traders dismissed were involved in government securities.

The spokesman said the layoffs follow a restructuring of the securities unit as well as "expense cuts" within nonstrategic areas. He said some may find other jobs with Chase.

Fed Wins Battle to Force BancTexas to Add Capital

DALLAS — The Federal Reserve Board won a court battle Tuesday that permits it to go ahead with plans to force BancTexas Group Inc. to inject capital into two banking units.

The U.S. District Court for the Northern District of Texas refused to grant BancTexas' request that the Fed be barred from applying its "source of strength" doctrine and require the holding company to bolster its subsidiary banks with capital.

— Barbara A. Rehm

New Deadline in Debit Card Antitrust Case

By YVETTE D. KANTROW

NEW YORK — MasterCard International and Visa U.S.A. have been given another month to consider settling the antitrust suit filed against them last July by 13 state attorneys general.

The extension until March 8 was granted Tuesday by the U.S. District Court for the Southern District of New York.

Since September, the card associations have been mulling a settlement proposal presented by the attorneys general, which sought to prevent MasterCard and Visa from providing a debit card system known as Entree. The attorneys general also wanted MasterCard and Visa to sell their interests in the two national debit card networks, Cirrus System Inc. and Plus System Inc.

Several Extensions

In their settlement offer, the attorneys general said they would drop the lawsuit, including the demand to divest Cirrus and Plus, if MasterCard and Visa agree to abandon Entree and enter no further joint ventures in the debit card field.

The card associations' response to the September settlement offer was originally due to be filed on Nov. 6. The court has since granted several one-month extensions to allow the two sides to continue negotiations.

In the absence of antitrust enforcement by the Justice Department, the state attorneys general joined forces to halt the Entree project. They accused MasterCard and Visa of engaging in a conspiracy to preserve the profitability of credit cards.

Difficult Progress

While MasterCard and Visa have been planning Entree for several years, the system has yet to get off the ground, and the specter of legal action has made progress difficult.

If the card associations accept the settlement offer as originally proposed, Entree would be scrapped, MasterCard could keep its Cirrus subsidiary, and Visa could retain its minority share of Plus. MasterCard and Visa would also be allowed to develop their own electronic debit card systems, but they would have to remain separate.

Officials on both sides of the issue will not disclose details of the behind-the-scenes settlement discussions. ☐

Bush's Economic Report Raises Reform of Deposit Insurance

By ROBERT TRIGAUX

WASHINGTON — Inefficiencies in the banking system and the need to overhaul the federal deposit insurance system are among the key issues discussed in the annual economic report of the president.

In addressing a wide range of economic issues, the 419-page report, released Tuesday by the White House, partially acknowledges poorly designed policies for contributing to the thrift crisis. But it also warns that the banking industry has serious obstacles to overcome – including a lack of funding discipline.

Deposit insurance, which is now being studied by the Treasury Department, has helped prevent public panics, but it also has encouraged excessive risk-taking by institutions that do not have enough of their own capital at stake, the report said. Deposit insurance also allows banks to continue raising funds even when the funds are being devoted to "activities that are not economically viable," the report states.

One result is that the recent deterioration of credit quality may actually be systemic, and not reflect one-time shocks or problems in specific sectors or geographic regions, according to the report.

"Banks have suffered from more bad loan experiences but in the aggregate have not received increased compensation from borrowers," the report said.

The use of risk-based deposit insurance, the report suggests, would give banks more incentives to weight their costs against their choice of investments. Reform of deposit insurance, as well as the repeal of the Glass-Steagall Act, which separates commercial and investment banking, must be considered in a larger effort to modernize the financial system, the report stated. ☐

Corrections

A Feb. 2 story ("Ranieri Group to Acquire Mortgage Origination Network," page 11) incorrectly stated the roles of two companies that have been helping sell parts of Commonwealth Mortgage Corporation of America, Houston. Hamilton, Carter, Smith & Co., Los Angeles has been assisting in the sale of the company's origination network. A unit of Countrywide Credit Industries, Pasadena, Calif., has been assisting in the sale of certain mortgage servicing rights.

■

A Jan. 30 story ("Louisiana's Hibernia, Eager to Add Texas Franchise, Takes a New Step," page 1) misstated the federal agency involved in the sale of BancTexas Dallas and incorrectly reported terms of the deal. Hibernia Corp. received $69 million from the Federal Deposit Insurance Corp. to assume all the assets and most of the liabilities of BancTexas Dallas. ☐

COMMENT/ *By Wayne B. Lewin*

For CEOs, a Staffing Crisis

Overall, most banks have weathered the winds of deregulation pretty well.

Oh, isolated problems have cropped up. And with unregulated liability rates, it is a bit more difficult to maintain an acceptable net interest margin. Nevertheless, deposits continue to roll in, and loans are made – things really haven't changed all that much.

Underlying this sense of satisfaction, however, is a fundamental perception that is about to be vaporized.

The business scenario just described assumes that the traditional universe of conscientious, capable, and inexpensive customer contact staff will continue to be available. While we have been reading for years that this population would shrink, it had not yet happened in the banking world, so the natural tendency was to ignore the warnings.

Time of Comfort

Based on my experience over the past 18 months, those comfortable days are about to end.

Officers at virtually every institution I talk to or work with – large as well as small – say: "We are having a very difficult time finding tellers and new account representatives. It is taking longer to fill these positions, and the people we are hiring are at a much lower level of competency than in the past."

Sound familiar? (If you are a CEO and you have not experienced the problem, call your personnel officer and ask whether it is happening. If it isn't, act now because you are lucky to have the lead time. Chances are you will discover it is happening. You just haven't been told.)

Make no mistake. This is not a short-term phenomenon. The demographic data are absolutely clear that this will be with us for the foreseeable future. A declining population is available to take entry-level jobs, and the nation's high schools are producing graduates who often can barely read, write, or compute.

> **'We are kidding ourselves if we think that traditional hiring, training, and compensation will bring about planned strategic outcomes in today's staffing environment.'**

This is a challenge that without a doubt requires the immediate attention of the CEO because it has practical as well as strategic implications.

The solution simply can't be left to the personnel department. I have repeatedly seen CEOs ordering the personnel department to "work harder at finding better people." Problem is, they don't exist – at least not at a salary level that fits within the industry's current economics.

This crisis is now beginning to affect the ability of some organizations to maintain adequate service.

One CEO recently got a rude introduction to the crisis when he ventured into the lobby on a busy Friday morning. He saw that only two teller windows were open and that one teller was also handling the drive-up window.

Lines were long, and customers were becoming angry. Like any good commander, this CEO found the teller supervisor and ordered her to "open more windows immediately." He was told there were no more tellers. Overtime guidelines had already been exceeded for the week, and teller openings were chronically unfilled.

Strategic Implications

Believe me, that CEO knows the crisis is here. But more importantly, the crisis has at least two strategic implications.

First, it calls into question the basic business plans that many institutions have spent so much time developing in the past four to five years.

Many banks intend to differentiate themselves on the basis of quality service. They are expecting much more complex work from their staffs when the employee pool is smaller and less well prepared than ever before.

Practically everyone wants to cross-sell services and make more fee-based sales. But as a recent headline in the *ABA Banking Journal* said: "Forget About Sales – Can Your Teller Add?" We are kidding ourselves if we think that traditional hiring, training, and compensation will bring about planned strategic outcomes in today's staffing environment.

Second, the economics of hiring competent entry-level employees has changed drastically.

I have done research suggesting that entry-level pay would have to be 2.5 times greater, on average, in order to attract truly more competent employees. Raising base pay a few thousand dollars simply attracts the same quality person but with several more years' experience. If anything, that may worsen rather than solve the problem.

Think what would happen to the bottom line if teller and new account staff pay was doubled. In at least one organization I studied, this alone would have almost wiped out the year's net income.

But the challenge does not stop here. People at this next tier are more career-oriented, so they expect more rapid salary increases and promotion opportunities, further straining banks' economics.

Few banks I know of today could use this approach anytime soon. They can't afford it, and the internal structure is not ready to meet such expectations.

(Parenthetically, it should be noted that this may be the only long-term solution. But details of that scenario will be left to a future article.)

Four Steps Recommended

Every CEO should now have a plan to deal with the crisis. In my practice, I have found that four steps must be taken. These must be seen by everyone in the institution as emanating from the CEO's office and having his full support.

Failure to provide this type of leadership will lead to increasing incidents of the type described earlier. One day, the crisis will hit home in some very unpleasant way. These are the four steps:

- Expect and plan for a high rate of turnover in the first 90 days. This means keeping the job-candidate pipeline full. Despite ever more sophisticated recruiting and selection tools, the

Mr. Lewin is senior vice president, retail banking, at University Financial Savings in Chicago.

GRAPEVINE/ *By Jed Horowitz*

Morgan Cracks Whip. J.P. Morgan & Co. president Douglas "Sandy" Warner played tough guy with the troops last week, telling senior managers they are not meeting cost-reduction goals, a source said. Morgan laid out a plan last summer to cut head count by a reported 10% – or some 1,500 people – by the end of 1990.

Mr. Warner rapped the budget plans submitted by most managers as insufficient to meet the overall target. The source said budget plans that formerly were reviewed perfunctorily are now undergoing tough scrutiny.

"Morgan doesn't have the luxury to be the benevolent institution it has been in the past," the source said. "It's not kinder and gentler; it's tougher and rougher."

A Morgan spokeswoman said the company does not comment on internal management sessions.

The meeting's somber tone also may have been colored by recently awarded bonuses that in most cases were sharply reduced from the previous year.

* * *

Net Net, Citibank Retreats. Citibank has abruptly withdrawn from a foreign-exchange clearing system it was developing with Chase Manhattan Co. and Morgan Guaranty Trust Co. Citibank pulled the plug only days after the money-centers conducted a road show to persuade other big trading banks to join the project.

Sources said Citibankers working on the project were as surprised as their colleagues by the order to withdraw. Apparently, Citibank bosses were concerned that the company was competing against itself. Citicorp's Quotron subsidiary recently won an assignment to develop software support for a rival, though less sophisticated, currency clearing system called FX Net.

Ironically, the decision to award the contract to Quotron was opposed by only two members of the bank-controlled FX Net board: one from Chase and one from Morgan.

Budd Berro, senior credit officer for Citi's North American investment bank, said Citicorp felt it was efficient to focus on the simpler FX Net system, a bilateral netting plan that is further along in development. Both systems are aimed at reducing credit risk and processing costs for interbank currency traders.

Citibank, Chase, and Morgan spent a few hundred thousand dollars developing the multilateral netting plan over the past year. Chase and Morgan continue to recruit other banks to give data and money for the next stage of development.

* * *

Shipley Snubs Gotham. Chemical Banking Corp. chairman Walter V. Shipley says his crusade to wean the bank from New York City is continuing. In a recent speech to New York State bankers, he said his company "doesn't want to be the slave to Manhattan that we have been," noting the difficulty of finding qualified people to work as clerks and tellers.

After the speech, he noted that he has met with recently inaugurated Mayor David Dinkins. The subject: Chemical's threat to move more than 3,000 people in its back-office and other operations out of Manhattan in 1994 unless it can win tax concessions from the city.

* * *

Round Trip in New England. Talk about bad timing. Walter Mercer, who was Citicorp's senior officer in Massachusetts, joined Bank of New England's real estate department just a few months ago. Weeks later, the Boston bank said almost 20% of its real estate portfolio was under water and projected a fourth-quarter loss of $1.2 billion.

Mr. Mercer wants to return his signing bonus so he can rejoin Citicorp, according to a reliable source. Neither he nor Citicorp officials would comment.

His new boss, executive vice president Robert McAleer, concedes the job has changed, but said he is trying to persuade Mr. Mercer to stay. "He thought he was coming in to build the portfolio locally and nationally," Mr. McAleer said. "We want him to manage the Boston Bank's real estate department. Things have changed."

* * *

Baa, Baa, Baankrupt. Call it sheepish black humor. At a recent meeting of bankers who are arranging debtor-in-possession credits for affiliates of the crumbling Campeau Corp., a chalkboard with a picture of a big sheep graced the conference room.

Issuing from the sheep's mouth was a cartoon balloon reading: "Baa, baa, I lost my company."

Company founder Robert Campeau is on a regimen of imported sheep cell injections to keep him youthful, the host bankers explained. When bankers involved in the loan call each other today, one creditor says, they identify themselves with a "baa." □

Regulators Requiring Citicorp to Raise Capital for AMBAC Subsidiary

Continued from *page* 1

form of letters of credit and other financial guarantees.

Although Citicorp has included AMBAC on its balance sheet since purchasing it in 1985, it also has been accused of double counting in including AMBAC's capital to support other activities of the parent. As of June 20, AMBAC's capital stood at $714 million.

Rival financial guarantors also have accused Citicorp of planning to transform existing letter-of-credit businesses into companies like AMBAC. The Financial Guaranty Insurance Corp. told the Federal Reserve Board last summer that Citicorp apparently believes that financial-guarantee insurance policies are not subject to risk-based capital rules that will go into effect at yearend 1992.

"We in Congress have just gone through the trauma of the thrift bailout caused, in part, by lax and inadequate capital standards," Sen. Symms, a member of the Committee on Finance, wrote Comptroller Robert Clarke last November. "This is neither the time nor the industry in which to experience a repeat performance through circumvention of applicable capital standards."

In responses from Mr. Clarke and Fed Chairman Alan Greenspan that Sen. Symms released Wednesday, the regulators said they would not permit Citibank to "deconsolidate" its financial-guarantee activities nor double-count capital from the units.

Mr. Clarke said his office "has informed Citibank that we expect it to consolidate AMBAC onto its balance sheet when computing its risk-based capital requirements," Mr. Clarke wrote. He said the new standard would be phased in over two years beginning Dec. 31, 1990.

In his letter to the senator, Mr. Greenspan said many technical questions remain on how to "calculate the level of capital required to support" financial guarantees. But he said it was clear that double counting is not permitted under the risk-based capital framework.

Citibank has been accused by FGIC, a bond insurance company, and the American Insurance Association of double-counting its capital at AMBAC Indemnity.

They charged that Citicorp reserved just $65 million in capital against AMBAC's $1.1 billion in assets, according to petitions sent to the Fed.

Since AMBAC has capital of approximately $630 million, Citicorp is free to use the remaining $535 million as capital, said Bonita Z. Dorland, vice president and director of FGIC's financial institutions group.

"Essentially, a conflict arises because insurance regulators count the full $630 million in capital as dedicated to AMBAC's policyholders, while the Fed counts $535 million as available for bank depositors,' Ms. Dorland said. ☐

U.S. Banks Take Steep Losses In Third World

Continued from *page* 1

J.P. Morgan & Co., $1.8 billion; and Manufacturers Hanover Corp., $1.6 billion.

Officials at these institutions said they plan to continue aggressively disposing of their Third World loans.

"We're still going down. We don't plan to level," said Paul McGonagle, senior vice president in charge of country risk management at First Chicago.

Sales in Secondary Market

Most of the Third World loans are being sold on the secondary market, where banks buy and sell their foreign debt on behalf of governments and private customers.

They are also negotiating debt-reduction agreements, generally a less costly method. For example, U.S. banks signed an agreement on Sunday to reduce the principal on their loans to Mexico by 35%, but refused to advance the country additional loans. In the secondary market, Mexico is estimated to have bought as much as $6 billion worth of loans at discounts of up to 60%.

"We could have sold out on Mexico at 40 cents on the dollar, but ended up by getting 65 through the latest agreement," one banker in New York pointed out. ☐

Fed Wins Court Fight Against BancTexas

DALLAS — The Federal Reserve Board won a court battle Tuesday that permits it to go ahead with plans to force BancTexas Group Inc. to inject capital into two banking subsidiaries.

The U.S. District Court for the Northern District of Texas refused to grant BancTexas Group's request to bar the Fed from applying its source-of-strength doctrine and require the holding company to bolster its subsidiary banks with capital. ☐

CNB to Buy Kentucky Bank

EVANSVILLE, Ind. — CNB Bancshares Inc. said it had agreed to acquire Kentucky's Henderson County State Bank from Henderson Financial Corp. for $1.75 million.

The deal for the bank, which has assets of $23 million, is subject to definitive agreement and regulatory approvals.

The firms said the transaction is expected to be completed in the second quarter. ☐

Rosenberg Seen Building B of A In Western U.S.

By SAM ZUCKERMAN

SAN FRANCISCO — Richard M. Rosenberg's selection as BankAmerica Corp. chairman and chief executive is likely toaccelerate the company's transformation from a global banking powerhouse to a western superregional, company insiders and analysts say.

Mr. Rosenberg, who will succeed A.W. Clausen after the company's annual meeting on May 24, has limited international banking experience. The 59-year-old executive has spent almost his entire career in marketing, and analysts expect he will focus on retail and commercial banking in the West.

ANALYSIS
Follow-up on the news

"International lending is not [Rosenberg's] strength," said a Bank of America executive who asked not to be identified.

Mr. Clausen, who had turned Bank of America into a major international player by the time he first retired in 1981, grudgingly consented to scale back international activities when he returned for a second tour of duty four years ago. But analysts say Lewis W. Coleman, the bottom-line-oriented head of Bank of America's world banking group, was not able to make all the cutbacks he felt were needed.

"Tom Clausen restrained Lew Coleman from acting more quickly and severely in withdrawing from markets and businesses," says PaineWebber analyst Thomas K. Brown. "The combination of Mr. Coleman and Mr. Rosenberg won't hesitate to further reduce the World Banking Group."

Flair for Downsizing

Mr. Brown says of Mr. Coleman: "I can't think of another person who takes such pleasure in downsizing his area."

Mr. Rosenberg and his top deputies, including vice chairman and chief credit officer Glenhall E. Taylor Jr. and vice chairman and chief financial officer Frank N. Newman, as well as Mr. Coleman, all did stints at Wells Fargo & Co., where they absorbed that organization's disciplined, cost-efficient approach.

Under their direction, BankAmerica is likely to become more like its San Francisco rival in strategic focus and a strict emphasis on profitability. Their approach allows little room for the kind of considerations of global prestige that landed Mr. Clausen the presidency of the World Bank in 1981.

AT&T Asks Banks to Join EDI Venture

By RICHARD LAYNE

ORLANDO, Fla. — Boosting the communications and payment technology known as electronic data interchange, American Telephone & Telegraph Co. is seeking an alliance with bankers to offer financial data interchange to corporations.

AT&T is the second corporate giant offering to join forces with large banks to incorporate EDI in cash-management services. Late last year, an affiliate of Sears, Roebuck and Co. formed a partnership with leading cash-management banks to combine funds-transfer information and other documentation in EDI transmissions.

Compatibility Explored

In EDI, corporations exchange invoices, advices, and other documents in electronic form. Banks have been exploring ways to make it compatible with the payment and cash-management services that are a significant source of their fee income.

The AT&T combine, like the

3 Regulators Clarify 'Highly Leveraged'

By BARBARA A. REHM

WASHINGTON — Federal regulators clarified their definition of highly leveraged transactions on Wednesday and, in the process, reduced the number of loans that banks will have to disclose as risky.

The revision came in response to criticism that guidelines released last October were too vague. Those guidelines, aimed at presenting a better picture of the riskiness of bank lending portfolios, were expected to result in huge increases in the loans classified as financing leveraged buyouts and other risky transactions.

The revision does not substantially alter the original definition. But it does effectively ease the terms in some cases, bankers said. For example, while the original definition did not set a minimum for affected loans, some bankers thought they had to include loans exceeding $5 million. But the revised rules specify a minumum of $20 million.

However, the regulators denied bankers' requests to exempt loans to cable and media companies from the highly leveraged transaction, or HLT, classification.

Changes in Rules On Leveraged Loans

The new guidelines:

- ☞ **Limit the transactions affected to buyouts and full-business recapitalizations.**
- ☞ **Include loans to media and cable companies.**
- ☞ **Exclude loans smaller than $20 million.**
- ☞ **Specify when performing loans can be exempted.**

Michael L. LaRusso, senior national bank examiner at the Office of the Comptroller of the Currency, explained that some bankers have been assuming cable and media company loans were excluded because these companies normally have high debt.

"That was the biggest industry the banks were not including in their HLT portfolios," he said. "We never contemplated excluding those loans."

Regulators do not limit the amount of highly leveraged

LEAGUE LEADER: Kenneth Seaton, chairman of the U.S. League of Savings Institutions.

U.S. League Committee Opposes Efforts to Shut Down the OTS

By WENDY GROVER

NEW YORK — A key committee of the U.S. League of Savings Institutions voted this week to oppose attempts to abolish the Office of Thrift Supervision, Kenneth Seaton, chairman of the trade group, said Wednesday.

In a meeting with *American Banker* reporters and editors, Mr. Seaton acknowledged that some thrift executives feel overburdened by OTS regulatory demands. But the league's federal affairs regulatory committee, at a meeting on Monday night, decided to support keeping the OTS in place rather than shifting thrift regulatory authority to the Office of the Comptroller of the Currency.

Rep. Charles Schumer, D-N.Y., plans to introduce a bill next week that would put state-chartered and federally chartered thrifts under the Comptroller, who primarily regulates national banks, and thrift holding companies un-

First Interstate Delays Offering At SEC's Order

By STEVE KLINKERMAN

DALLAS — First Interstate Bancorp said Wednesday that it has been forced to delay its $400 million stock offering for the second time because the Securities and Exchange Commission has ordered it to make additional disclosures.

A First Interstate spokesman refused to discuss the nature of the disclosures demanded by the securities industry watchdog. But he confirmed that the Los Angeles company plans to put $60 million more capital than previously disclosed into its ailing Texas unit.

Delay in January

First Interstate's 7.5 million-share stock offering was delayed last month after the SEC ordered additional disclosures about the corporation's Texas and Arizona units.

The company released an amended registration statement Jan. 31 disclosing that the SEC had "made an informal inquiry" concerning fourth-quarter loan-loss provisions and that regulators had barred its Arizona and Texas units from paying div-

Citibank's Debt Negotiator Moves to International Post

By JED HOROWITZ

William R. Rhodes has made it official. The banker whose name has become synonymous with hard-nosed Third World debt workouts is stepping back from the negotiating fray to take on more statesmanlike duties.

Citibank announced Wednesday that Mr. Rhodes, 49, has been promoted to senior executive, international. He will be responsible for "contacts with the many worldwide and Washington constituencies that touch on the company's international business," according to the nation's largest bank company.

Mr. Rhodes also will supervise the management of Citibank's cross-border portfolio. His previous job as chairman of the bank's restructuring committee will be assumed by Robert A. McCormack, who will become chief negotiator for the restructuring of Citicorp's $8.6 billion of long- and medium-term debt.

William R. Rhodes

Mr. McCormack, 46, is a vice president who has been on the bank's restructuring committee since the middle of 1987.

Mr. Rhodes' desire to take a break from the prestigious but wearing role of chief tough guy was well known. "I'm the last of the Mohicans," he told a reporter last year, shortly before he began landmark negotiations to restructure $54 billion of Mexican bank debt. "All the other major players in the debt talks in 1982 have gone on to other things. I don't want to spend the rest of my career doing this."

The New York City native, who joined Citicorp in 1957, spent Wednesday – his last day as chief negotiator – at a signing ceremony celebrating completion of the Mexican debt package, a bank spokesman said.

In addition to cochairing the Mexican creditors' committee, Mr. Rhodes has chaired industry negotiating panels on the debt of Argentina, Brazil, Peru, and Uruguay.

While it is trying to recoup as much of its loans as possible, Citicorp chairman John S. Reed remains intent on building a strong banking franchise in Latin America. Citicorp is the only major bank that agreed to provide new funds to Mexico as part of the new debt package. Mr. Reed, who spent part of his boyhood in Argentina, has a strong personal interest in Latin America.

Mr. McCormack will report to Mr. Rhodes, who reports to Mr. Reed. Mr. Rhodes' new role as ambassador to the international community was previously held by George J. Clark, who retired Feb. 1 after 26 years with Citicorp. ☐

NEWS *briefs*

Brady Minimizes Difference With Fed on Interest Rates

WASHINGTON — Treasury Secretary Nicholas Brady played down the administration's disagreement with the Federal Reserve over interest rates, saying reports of these kinds of dispute are sometimes overblown.

It's just a question of nuance, Mr. Brady told the House Appropriations Committee on Wednesday. The administration's focus is more on maintaining growth than on containing inflation, he said, and the Fed is more concerned about inflation.

Higher Capital Level Urged For 2 Mortgage Agencies

WASHINGTON — The government should take greater steps to ensure the safety and soundness of two large mortgage agencies, a Senate banking subcommittee was told Wednesday.

Washington lawyer Thomas Stanton said the Federal Home Loan Mortgage Corp., or Freddie Mac, and the Federal National Mortgage Association, or Fannie Mae, should boost their capital to "levels comparable to those now being required for thrifts and commercial banks."

But David O. Maxwell, chairman and chief executive of Fannie Mae, told the panel his agency is "a strong, stable, financially sound company that Congress and American taxpayers don't have to worry about."

Leland C. Brendsel, chairman and chief executive of Freddie Mac, said it would take "an economic catastrophe worse than the Great Depression" to make his agency a federal liability.

Southeast Banks Rebound, Raising Profits in Quarter

By KENNETH CLINE

ATLANTA — Having rebounded from the credit problems and margin pressures experienced earlier in the year, major banks in the Southeast posted healthy profit increases in last year's fourth quarter. But analysts are predicting slightly lower profits this year.

"Generally speaking, there was no evidence of dramatic problems," said Jon Burke of Robinson-Humphrey Co. in Atlanta. "The problems that do exist are focused on individual markets and individual financial institutions."

Mr. Burke said profits of the major banks on average rose 12 to 13% in 1988, which was consistent with their historical levels. But he said earnings of major banks this year would increase only about 9 or 10% be-

Hawaii Deal A Departure, WSGP Says

By SAM ZUCKERMAN

SAN FRANCISCO — Despite agreeing to a quick sale that will result in a spectacular profit on their Hawaiian bank company, former Treasury Secretary William E. Simon and his partners expect to stick to a strategy of holding their remaining banks and thrifts three to seven years before selling, a cofounder of the group said.

"A unique set of circumstances" allowed WSGP International Inc. to more than double its investment by agreeing to sell $812 million-asset First Interstate of Hawaii Inc. just one year after buying the Honolulu-based banking company, co-chairman Gerald L. Parsky said. For the three thrifts and one bank it still owns, the firm has "an approximate five-year plan" to build franchise value before selling out, he noted.

An Irresistible Offer

Those unique circumstances amounted to an offer WSGP couldn't refuse. The firm agreed to sell the Hawaiian banking company to First Hawaiian Inc., the state's second-largest banking organization, for 2.3 times book value at closing, a price Mr. Parsky estimated would be $135 million to $140 million when the deal is completed in six to nine months.

In February 1989, the firm bought First Interstate for about $60 million, on a par with book value.

Total profits will be even higher because the original purchase was partially financed, Mr. Parsky said.

"They got a top price from a willing purchaser prepared to pay full value," said James M. Rosenberg, analyst with Shearson Lehman Hutton Inc. ☐

COMMENT/ By William M. Isaac

S&L Law Needs Revision To Accelerate the Cleanup

No one is satisfied with the pace of the savings and loan cleanup. The dissatisfaction stems, to some degree, from unrealistic expectations. The problems in the industry are massive, and we need to accept that it will require the better part of a decade to put them behind us. Having said that, there are some steps we can and should take to improve the workout process.

Part of the problem is the structure of the bailout program. When I testified before the House Banking Committee when the Financial Institutions Reform, Recovery, and Enforcement Act was being considered last year, I expressed three principal concerns.

A New Agency

First, instead of turning the problem over to the Federal Deposit Insurance Corp., a new bureaucracy – the Resolution Trust Corp. – was created. This, I felt, would inevitably lead to delays, infighting between the RTC Oversight Board and the RTC itself, and a lack of specific accountability.

Second, although the bailout plan might provide adequate revenues to absorb the ultimate losses in the S&L industry, it seemed woefully inadequate in providing the working capital needed to carry the troubled assets pending liquidation.

Third, I was concerned about the provisions in the law that would diminish the value of an S&L charter (for example, raising the qualified thrift lender test, charging S&Ls significantly more than banks for deposit insurance, and failing to allow bank holding companies to take full advantage of a thrift's branching rights and other powers).

I am convinced that these deficiencies in the law will continue to hamper the S&L cleanup until they are modified by Congress.

Deals Done Badly

Another shortcoming is that the RTC is attempting to dispose of the S&Ls in an unrealistic fashion. Washington is up in arms about the S&L deals arranged at the end of 1988 by the Federal Savings and Loan Insurance Corp.

It is felt that those deals required too little private capital, were too tax oriented, and provided excessive asset protection that created little incentive to work the assets properly. It also appeared to many that the FSLIC deals were not open to all comers.

> **'The asset protection area is where the RTC is shooting itself in the foot.'**

While it is understandable that the RTC would want to remedy these perceived deficiencies, the pendulum has swung too far in the other direction.

I have no quarrel with imposing higher capital standards, but we need to recognize that this will necessitate more financial assistance from the RTC to make the deals produce acceptable returns on investment. Nor do I have any quarrel with opening the bidding process. Moreover, I favor removing the tax benefits from the deals.

The asset protection area is where the RTC is shooting itself in the foot. The RTC Oversight Board has mandated that the RTC pass to the purchasers of failed S&Ls as much risk as possible on the S&Ls' assets. If it were dealing with only a handful of S&Ls, the RTC might get away with imposing this requirement. But there are hundreds of S&Ls to be handled, and it's a buyers' market.

Particularly at a time when the regulators and analysts are beating up on banks that have any serious exposure in real estate, it's not realistic to expect bidders to be receptive to deals that create additional exposure.

Bidding Must Be Made Easier

The RTC needs to make it easier for people to bid. The RTC's current policies require bidders to spend considerable time and money on due diligence, with no guarantee their bids will be successful. Not many bidders are willing to do that.

The solution is to put the failed S&Ls up for bids as is, but then give the successful bidder the right, for six to 12 months after the acquisition, to sell to the RTC any assets deemed troubled under fairly liberal preestablished criteria.

The troubled assets could be sold to the RTC in exchange for promissory notes, which would reduce the RTC's need for cash. The acquirer would agree to work the troubled assets on behalf of the RTC under an incentive collection arrangement, with the RTC having the power to shift the servicing to another party if it becomes dissatisfied with the acquirer's performance.

The thrift cleanup is proceeding at a snail's pace, even though a lot of good people are working incredibly hard to get things done. The problems are structural and procedural and can be readily cured. In the meantime, the cost of the cleanup is increasing at the rate of $10 million for each day we delay. ☐

Mr. Isaac was chairman of the Federal Deposit Insurance Corp. from 1981 to 1985. He now heads the Secura Group, a Washington-based consulting firm.

THE LOBBYISTS/ By Barbara A. Rehm

Credit Union Group Mans the Barricades To Preserve Status

For its annual government affairs convention, the **Credit Union National Association** turned its "Operation Grassroots" into a military mission.

Operation Grassroots is a campaign begun Oct. 30 to educate credit union members about bank and thrift efforts to bring the same regulation and taxation to all financial institutions.

In the fight to preserve the special status of credit unions, thousands of credit union executives and volunteers from around the country became willing recruits last week.

Revving up the troops, CUNA's staff issued silver dog tags with red letters on one side, "Operation Grassroots – A Credit Union System Campaign," and blue letters on the other side, "Credit Unions, For People – Not Profits."

But the dog tags were just the beginning. Attendees also were outfitted with bright-yellow patches announcing that they are "Volunteers for Victory." Conference materials were supplied in Army-green pouches.

CUNA put its members on "full alert" that the government may tinker with the credit union system by revoking the industry's tax-exempt status or merging its insurance fund into the bank and thrift funds.

After a legislative briefing by association lobbyist **Charles O. Zuver,** credit union members were deployed to Capitol Hill. Their mission: maneuver through their lawmakers' offices spreading the message that credit unions do not operate under the same rules as banks and thrifts because they are nonprofit organizations.

Hutchinson Gets Title At Mortgage Group

After more than five months, it's official: **Suzanne C. Hutchinson** will be named executive vice president of the **Mortgage Insurance Companies of America.** Ms. Hutchinson has been in the top job on an interim basis since September, replacing **Steven P. Doehler,** who resigned.

S.C. Hutchinson

"After an extensive search, the MICA search committee determined that Suzanne was the most qualified person to take over the helm of the association," said the group's elected president, William H. Lacy.

Ms. Hutchinson joined MICA in 1986 as general counsel and staff vice president and lobbied Congress and the agencies on housing policies as well as bank and thrift regulations. Before 1986, Ms. Hutchinson lobbied the agencies for the Mortgage Bankers Association and worked for the Golembe Associates consulting firm.

Mortgage Bankers Fight Referral Fee

The **Mortgage Bankers Association of America** has hired some outside lobbying power to try to persuade Congress to prohibit realty brokers from earning mortgage referral fees.

The trade group has retained the **Evans Group Ltd.,** a lobbying concern headed by former Rep. **Thomas Evans,** R-Del. **Thomas H. Quinn,** a partner with Mr. Evans' former law firm, **O'Connor & Hannan,** is assisting Mr. Evans.

The mortgage bankers have spent more than two years seeking a referral-fee ban from the Department of Housing and Urban Development. But HUD has not acted on the issue, prompting the trade group to shift its focus to Congress. The group has reportedly earmarked $250,000 for a Hill fight.

The mortgage bankers claim it is a conflict of interest for realty brokers to receive fees for helping home buyers get mortgages. The group has met with stiff opposition from the **National Association of Realtors, Citicorp,** and some other large lenders.

Freeman On His Own In Nation's Capital

Harry L. Freeman is back in the nation's capital with his own consulting firm, the Freeman Co., to represent multinationals in trade and other foreign economic issues.

Mr. Freeman resigned last year as executive vice president of American Express Co. after accepting "executive responsibility" for the false-story campaign that tried to link former American Express official Edmond J. Safra to drug running and the Mob. The company indicated Mr. Freeman was not personally involved.

Harry L. Freeman

As an entrepreneur, Mr. Freeman will do many of the things he did for American Express: government relations, public and media relations, philanthropic and cultural programs, and strategic planning.

Personal goals are to improve U.S. trade statistics and Democrats' dialogue with business.

"Both are, certainly, long crusades," Mr. Freeman said. "One may even be possible."

— Robert Trigaux

GLOBAL *dispatches...*

Canadian Imperial Seeking Higher Worldwide Profile

LONDON — **Canadian Imperial Bank of Commerce** Ltd. has built up a portfolio totaling $7.65 billion in highly leveraged and real estate transactions, much of it in the United States, but its exposure to those troubled sectors is "well diversified," according to senior officials of the bank.

The Canadian bank, which has assets of $84.7 billion, released key operating data to a group of institutional investors in London, part of a road show in Europe that is intended to raise the bank's profile internationally.

Canadian Imperial reported record basic earnings of $644 million for 1989, up from $500 million the preceding year. At the same time, it took provisions for 100% of its troubled loans to Third World countries, excluding those of Mexico, for which it set aside 45% of its remaining $317 million of exposure.

R. Donald Fullerton, the bank's chairman and chief executive, told the London audience that Canadian Imperial's goal is "to be recognized clearly as a leader in the financial services industry in North America."

In highly leveraged transactions, it has $2.2 billion in its portfolio, of which just over 60% is outstanding in the United States, said A.L. Flood, president of the corporate bank unit.

Mr. Flood did not disclose the Canadian bank's potential loan losses, although he said its leveraged lending, consisting of some 106 transactions, is "well diversified."

Supervision Is Noted

Mr. Flood commented: "This portfolio is closely supervised, and while some restructuring will no doubt take place, we do not envisage any situations that would have a long-term adverse impact on the bank."

In real estate lending, the bank has $4.6 billion outstanding, of which $2.71 billion represents commitments in Canada, $1.77 billion in the United States, and some $170 million in a number of other countries.

The "best estimate" at present is that loan losses should not exceed $17 million on this particular portfolio, against $10 million last year.

The Canadian bank continued to make its No. 1 priority improving the quality of its assets, Mr. Flood stressed. The Canadian bank's nonperforming loans, which peaked at $2.1 billion in 1986, or the equivalent of 4.02% of its loan portfolio, are now down to $653 million, or 0.96% of outstandings.

The bank, which was heavily embroiled in the provisioning for Canada's troubled Dome Petroleum, has now reduced sour loans to the point where it has achieved parity with the Canadian banking system in terms of nonperforming lending, according to the executive. The bank aims to be "an industry leader in asset quality. Our objective over the next three years is to reduce our loan losses to 0.25% of our portfolio," he said.

Mr. Flood also said the bank's asset sales and syndication team would continue to be very active, and that it played an important part in managing risk in the bank's portfolio.

— John Evans

... by country

CANADA

American Express Co. will be permitted to set up a bank in Canada before the government introduces new banking legislation, Junior Finance Minister Gilles Loiselle told the House of Commons in Ottawa.

Mr. Loiselle promised American Express last year it would receive its license by April 1990, but final approval was postponed until the government could complete new banking legislation.

Mr. Loiselle told Commons: "I am afraid [the new banking act] cannot be in place before American Express receives its license."

An American Express vice president, Nick Mancini, told the *Financial Post* that the company expected to receive final government approval in April.

— Reuters

THE PHILIPPINES

Overseas banks that are opting not to lend more money to the Philippines could find their decision affects their future business dealings with the country, Finance Secretary Jesus Estanislao said.

"The Philippines cannot be taken for granted, and those who are going to support us will be treated very favorably," Mr. Estanislao said.

But for those who are not supportive, "We will consider them as not very friendly and therefore their long-term business relationship with the Philippines would be taken in light of their behavior," he told reporters.

— Reuters

BRAZIL

Brazil's key bank rate surpassed 100% a month for the first time, reflecting the country's losing battle against inflation.

The overnight rate for deposits at commercial banks was fixed by the central bank at 100.02%, up from Tuesday's 98.05%, the previous high.

The rate is stated in monthly terms even though it refers to one-day deposits.

— Reuters

U.S. Firms Lead in Global Merger Loans

By JOHN EVANS

LONDON — U.S. corporations were by the far the most active last year in raising international bank loans and credits to help finance mergers and acquisitions worldwide, according to the Bank of England.

The value of this type of financing more than doubled during 1989, to $55.8 billion, with American companies raising $33.7 billion, or 60% of the total.

U.S. concerns dislodged British companies, which have been among the most aggressive players in the cross-border mergers in recent years and the biggest international borrowers from banks for acquisition purposes, data from the British central bank showed.

International Financing for Mergers
in millions of dollars

Country of borrower	1989	1988
United States	$33,703	$1,705
Britain	10,059	14,141
Canada	2,100	150
Australia	1,247	2,311
France	789	2,447
Japan	NA	1,472
Other	7,946	2,367
Total	**$55,844**	**$24,593**

Source: Bank of England

British Led in 1988

In 1988, when total acquisition-related bank borrowings reached $24.9 billion, British companies were responsible for $14.1 billion, against a skimpy $1.7 billion by U.S. corporations. Last year, the British raised $10.1 billion.

In a separate report, U.S. corporations are shown to be the largest single corporate acquisition force in Europe, where $55 billion in cross-border deals were concluded last year.

American companies spent $17 billion to take over 185 European corporations and were responsible for more than half of the $24.5 billion of acquisitions in Britain, according to the *European Deal Review* publication of Translink, a U.S. company that monitors mergers and acquisitions in Europe.

Second Half Was Active

European activity by U.S. acquirers was concentrated in the second half, when U.S. companies concluded more than 100 acquisitions worth $12.5 billion, including Ford Motor Co.'s purchase of Britain's Jaguar car company.

The Bank of England's own survey, in its quarterly economic bulletin, analyzed loan financings raised on an international basis, rather than in domestic banking markets.

Of last year's financing total, more than 80%, or $46.2 billion, was denominated in U.S. dollars.

"Many of the credits arranged in the period 1987-89 were intended to finance acquisitions of U.S. companies. Consequently, merger-related syndicated loans have been overwhelmingly dollar-denominated," the Bank of England noted.

Syndicated loans have proved an attractive vehicle for corporations to mount acquisitions, the bank added.

Such loans allow "borrowers to raise larger sums than they are able to obtain through either the Eurobond or the equity market over the short term, and to do so quickly. Moreover, borrowers may subsequently refinance such debt by utilizing other markets."

In turn, acquisition-related business has provided banks with major forms of income, either through advisory fees or interest charges and other fees from participating in financing packages, the bank said. ☐

Moody's Questions Impact of Debt Relief

By JAMES R. KRAUS

NEW YORK — Debt-reduction agreements similar to the one just signed between Mexico and its creditor banks are unlikely to solve the problems of Third World debtor countries, Moody's Investors Service said.

The rating agency said in a report this week that the reductions are too limited to give major debtor countries the financial relief they need. These countries also must drop the subsidies and deficit-ridden state corporations that distort their economies, it said.

Mexico's agreement, signed Sunday, has been criticized for failing to give that nation any real financial relief. It cuts principal on Mexico's foreign bank debt by about $7 billion and annual interest payments by $1.4 billion.

However, Mexico is borrowing $5.7 billion to buy zero coupon U.S. Treasury securities that will collateralize its own bonds. It is also borrowing $1.2 billion more from banks.

Net Effect Lessened

As a result, senior bankers have estimated that Mexico is reducing its net annual interest payments by just $1 billion.

This, Moody's noted, amounts to only a 10% cut in Mexico's interest bill on a total foreign debt of about $100 billion.

Moody's said debt reduction agreements are also limited in value since they only reduce debt to foreign commercial banks, not to other governments or to international lending agencies such as the World Bank.

Other Debt Untouched

"Even if debt-reduction agreements reduced the [commercial bank] debt [to] zero, you still have a very high level of other types of debt," said Guillermo Estebanez, a Moody's vice president and analyst of sovereign debt. Such agreements can only help countries, such as Chile, that have already moved toward economic reform, he added.

The rating agency ranked Venezuela as the next most likely candidate, because of its economic reforms, to benefit from debt reduction. Debt agreements will be of little benefit to Brazil or Argentina because of their increasing economic disarray, the agency said. ☐

New Definition Of Leverage Hits 2 Banks Hardest

By BARBARA A. REHM

WASHINGTON — Federal regulators' revised definition of highly leveraged transactions will take the biggest toll on First Chicago Corp. and Bank of Boston Corp., analysts said Thursday.

The clarified definition, released Wednesday, specified that loans financing leveraged transactions involving media and cable companies would be subject to disclosure. As heavy lenders to those industries, First Chicago and Bank of Boston will have to reclassify a substantial number of loans as risky.

The revision came in response to criticism that the definition released last October was too vague. But analysts said Thursday that the new guideline remained too general to truly gauge the riskiness of a bank's portfolio. They said the definition will result in disclosure of the quantity of loans financing leveraged transactions but will not touch on the quality of those credits.

ANALYSIS: *Follow-up on the news*

Under the definition, loans that finance highly leveraged transactions must be disclosed if they result in the borrowing company's debt exceeding 75% of its equity or if they double the company's debt and exceed 50% of its capital.

No Curb to Risky Loans

The new definition does not curb risky loans. But the disclosure of a significant increase in the number of loans deemed risky by regulators could affect the way investors evalute a bank.

The revised definition, while not substantially altering the original definition, will reduce the number of loans disclosed in most cases, bankers said.

But the number will go up for banks that have not already classified cable and media company loans as risky. An exclusion for those loans had been sought because those companies normally have high debt.

At the Bank of Boston, John Kahwaty, director of investor relations, acknowledged that the bank could have to double the amount of loans reported.

"Clearly this concerns us," he said. But he maintained that the riskiness of his bank's portfolio has not increased. "A definitional change," he said, "does not change the inherent risk of these loans."

Before the definition came out last October, Bank of Boston re-

Bill to Seek Steep Penalty In Drug Cases

By BILL ATKINSON

WASHINGTON — Dissatisfied with the federal attack against the booming money-laundering business, Sen. John F. Kerry said Thursday he plans to introduce a sweeping bill that, among other things, would revoke the charters of banks connected to laundering.

At a news conference, the Massachusetts Democrat released a Senate report critical of the government's lack of progress in curbing money laundering. His legislation is expected to incorporate a number of the report's recommendations.

Among them is a recommendation that bank charters be revoked when an institution's senior officials or directors have knowledge of money laundering.

The report also urged the regulation of currency exchange houses, check cashing-businesses, and foreign transmittal agencies because they are increasingly being used to launder drug profits.

The report said the Senate Banking Committee should in-

First Interstate Expects Shortfall on Stock Issue

By STEVE KLINKERMAN

DALLAS — First Interstate Bancorp said Thursday that it expects to raise only $275 million, rather than $400 million, in its stock issue. It also disclosed that regulators ordered a $91 million cash infusion last month into its troubled Arizona unit.

The lower figure could put the company in the position of having to sell assets or issue additional securities, if earnings do not rebound before new capital guidelines take effect at the end of 1992. And some analysts were skeptical that even the $275 million could be raised. (See related story on page 16.)

The disclosures were made in a second amended version of the company's stock registration statement, which was issued at the insistence of the Securities and Exchange Commission. The disclosures will allow First Interstate to proceed with its stock offering, which it expects to complete next week.

The statement said the SEC is continuing to investigate the circumstances surrounding First Interstate's fourth-quarter loan-loss provision of $400 million.

Los Angles-based First Interstate said in its second amended statement that it signed an agreement with the Office of the Comptroller of the Currency to maintain equity equal to 5% of assets at the Arizona unit.

Racial Overtones

by William R. Hackney, III, C.F.A. Chief Investment Officer

RACIAL BACKLASH: This newsletter article stirred a storm.

Bank Officer's 'Humor' Forces Apology to Germans, Japanese

By KENNETH CLINE

ATLANTA — An attempt by an executive of First Union Corp. to add humor to an article about the impact of rising overseas interest rates backfired, and the company this week hurriedly apologized for racial slurs against the Japanese and German people.

The article in a monthly newsletter of the Charlotte, N.C.-based bank company referred to Japanese as "Nips" and Germans as "Huns."

It was written by First Union's chief investment officer, William R. Hackney 3d, whose calls Thursday from the press were being handled by a bank spokesman.

Mr. Hackney referred at the end of the article to his "foregoing tongue-in-cheek assault." The article, headlined "Racial Overtones," began by stating: "The Huns and the Nips are at it again!

2 Bank Funds Bravely Target Leveraged Loans

By CAREN CHESLER-MARSH

Just when financing for highly leveraged transactions was getting tougher and tougher, two new bank loan funds decided to target HLTs as their primary investments.

The funds, which are seeking investors for a total of about $1 billion in capital, could add some much-needed liquidity to the HLT market. The investment banking unit of Citicorp, in a joint venture with Boston-based Prospect Street Investment Management Co., is starting a $500 million fund. Manufacturers Hanover Corp., along with Merrill Lynch & Co. and Capital Holding Corp., a Kentucky-based insurance concern, are now marketing the other fund of similar amount.

The funds provide vehicles for Citicorp and Manufacturers Hanover to dispose of some of their own highly leveraged loans, enabling them to purchase more. They can also produce huge returns for the equity holders. Both funds will probably be set up as limited partnerships.

While the concept of a fund

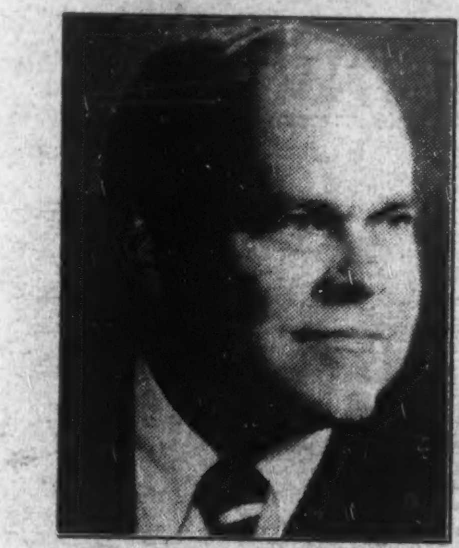
First Hawaiian Chief Sees Room for Profit in Simon Deal

By SAM ZUCKERMAN

SAN FRANCISCO — When First Hawaiian Inc. announced Tuesday that it will buy First Interstate of Hawaii from William E. Simon's merchant banking firm for an estimated $135 million, some observers thought the young chief executive of the acquiring bank had been taken to the cleaners.

Former Treasury Secretary Simon paid less that half that amount for the banking company a year ago.

And Walter A. Dods, 48, had been made chairman and chief executive of First Hawaiian only four months earlier, following the death of John D. Bellinger, the autocrat who had dominated Hawaii's second-largest bank for 10 years.



Walter A. Dods Jr.

Mr. Dods, however, bristles at the notion that he is overpaying for the $812 million-asset First Interstate. "I know what I can take out on the operational side," he says. First Hawaiian has 169 current job openings, he states, so "synergy can occur without job loss."

The verdict is not in on the Simon deal. But the purchase may yet prove to be a good one for First Hawaiian, which has $5 billion in assets. In the meantime, Mr. Dods is winning praise as a talented manager and salesman.

"He is a very strong chief executive, one of the most street-wise guys I know," said Philip Norris, Honolulu manager of Prudential-Bache Securities.

In his five years as president of First Hawaiian, Mr. Dods was called "Buffy" by his colleagues because he served as a buffer between them and Mr. Bellinger. When he took the top job, some viewed him as an untested underling who had never really exercised authority.

Mr. Dods joined First Hawaiian as a marketing specialist in 1968. A little more than a year later, as a young junior executive, he coined the advertising slogan, "First Hawaiian – the Bank that Says Yes," to promote the bank's image as a convenient, friendly place to get a loan. The idea was radical in banking's pre-sales-culture days.

"You can imagine how scandalized the senior people were," Mr. Dods recalls. "They wanted to change the slogan to 'The Bank that If You Give Us the Opportunity Might Consider Saying Yes.' " Mr. Dods overcame the skeptics, and his version remains First Hawaiian's theme to this day.

First Hawaiian has enjoyed 25 consecutive years of earnings growth. But, with 33% of commercial bank deposits, First Hawaiian finds itself lagging behind Bank of Hawaii's 45% share. Hence the acquisition.

Mr. Dods' strategy is "not to go to markets we're not familiar with, but to grow with our own market." That has not been a bad approach in a state where tourism and Japanese investment have brought rapid economic growth. First Hawaiian assets climbed 20% in the past year, while nonperformers remained an enviable 0.04% of total assets. □

NEWS *briefs*

NY Thrift Files Papers To Exit Home Loan Bank

NEW YORK — American Savings Bank has taken another step toward exiting the Federal Home Loan Bank System.

The White Plains, N.Y., thrift, which first expressed interest in leaving the system last year, said Thursday it had filed a notice to withdraw from the Federal Home Loan Bank of New York. The filing follows the thrift's conversion in December from a federal to a state charter.

The Home Loan Bank System's role in the thrift bailout has caused American Savings to be concerned about the future value of its $24.6 million in stock in the Home Loan bank, said Robert Hughes, the thrift's chief financial officer.

Soviets May Find a Role In East European Bank

BRUSSELS — The countries establishing a new East European development bank may consider allowing the Soviet Union to take a stake but not borrow from the bank for some time, a senior European banker said.

Ernst-Guenther Broeder, president of the European Community's European Investment Bank, said the idea may be discussed by nations drawing up statutes for the bank.

The status of the Soviet Union is a main sticking point in talks in Paris this week to form the European Bank for Reconstruction and Development.

First Eastern Is Set to Buy Atlantic Financial Offices

WILKES-BARRE, Pa. — Atlantic Financial Savings and the Resolution Trust Corp. confirmed their intent to proceed with the sale of nine branches to First Eastern Bank as announced Dec. 22.

First Eastern, a national bank with headquarters here, has about $2.3 billion in assets. Atlantic Financial Savings is based in Bala Cynwyd, Pa. □

Bullock Hopes to Keep Connecticut Franchise

By JED HOROWITZ

NEW YORK — H. Ridgely Bullock, the acting head of Bank of New England Corp., said the beleaguered company has not yet received bids for its Connecticut Bank and Trust Co. unit and prefers not to sell it at the distressed price it probably would fetch today.

He conceded that regulatory and market pressures may not give him the option to refuse a strong bid for the Connecticut franchise. But, in a telephone interview Thursday, the interim chairman was optimistic about his ability to save the $29 billion-asset institution from the clutches of regulators.

He underscored the point by saying he is actively campaigning for the full-time job of chief executive.

"Why? Because that's where the money is," Mr. Bullock said, quoting bank robber Willie Sutton. "If carried out succesfully, this could be very personally rewarding."

Since being named interim chairman and chief executive officer less than two weeks ago, the 55-year-old lawyer and investment banker has aggressively touted Bank of New England's ability to restore the confidence of depositors and investors.

Fast Start on Rebuilding Plan

He also has ousted four senior executives, and simultaneously managed the sale of $1.6 billion of assets – a fast start on a plan to shed $6 billion in order to replace lost liquidity and build eroded capital.

Mr. Bullock's concern that the Connecticut franchise might be sold too cheaply was underscored Thursday when investors spurned an announcement that BancNewEngland Leasing Group was sold at a premium of $92.5 million. The price was $17.5 million less than expected.

Bank of New England's stock fell as much as $1.50 during the day. In late afternoon trading on the New York Stock Exchange, it changed hands at $5.37, off 50 cents from Wednesday's close.

H. Ridgely Bullock
Bank of New England Corp.

Bank of Tokyo bought the leasing unit as well as $500 million of the Boston bank's lease portfolio and servicing rights on $1 billion of leases that Bank of New England is retaining. "With all they were seeing and hearing about us, they were concerned," said spokeswoman Marcia Ryan, explaining the lower sale price. She also noted that Bank of New England is eager to maintain "long-term good relations" with the Asian bank.

"The bloom popped today because it was the first negative story to come out in two weeks," said Gerard Cassidy, a Maine-based analyst for Tucker Anthony & Co. "It's less than expectations and the earnings or lack thereof are coming out next week. You still have a very troubled bank, and reality is coming back into the marketplace."

Link to New England Economy

Mr. Cassidy said the stock price had been boosted recently by Mr. Bullock's enthusiasm, the fast pace of asset sales, and the hefty 27% premium the bank received from Citicorp for its credit card portfolio. "But the New England economy hasn't materially changed, and the bank's outlook is highly dependent on that," the analyst said.

Georgia Bank Boosts Image In Thrift Deal

By KENNETH CLINE

ATLANTA — First American Bank of Georgia may go a long way toward changing its image as a perennial also-ran in Atlanta banking with its announcement Wednesday it will acquire 22 thrift branches.

Analysts warned, however, that the deal could face regulatory obstacles.

The 22 branches now belonging to Fulton Federal Savings Bank would boost First American's branch total to 74, moving it ahead of First Union National Bank of Georgia – with 59 branches – to the fifth-largest retail presence in Atlanta.

Move to 4th Place

The acquisition would boost First American's share of deposits in the eight-county region to more than 8%, improving its market share from seventh to fourth place.

As part of the deal, First American is to pay a premium of $50 million to assume $917 million in deposits, as well as related lease obligations. Fulton Federal, which is severely undercapitalized, would be left with 15 branches in middle and south Georgia.

The two companies are still negotiating a transfer of assets, but Fulton Federal president Charles T. Cantrell said his bank would retain most of its residential loan portfolio and mortgage-backed securities, probably leaving First American with consumer and commercial loans.

The $1.7 billion-asset First American is a subsidiary of Washington-based First American Bancshares.

The Fulton Federal deal fits in with First American's strategy of strengthening retail operations while deemphasizing real estate lending. Chief executive Guy W. Freeman said a major benefit of the announced deal is putting First American in three counties – Bartow, Fayette, and Henry – where it now lacks a presence. □

COMMENT/*By Sanford Rose*

Making Banks 'Universal' Can Improve Credit Quality

Oddly enough, one of the principal reasons for giving commercial banks investment-banking powers is to help them become better commercial banks.

That is, if we permit commercial banks to own corporate equity and underwrite all types of securities, they will probably end up doing a more effective job of monitoring commercial-loan credit quality than is now being done. As a result, fewer banks will fail, and the risk-adjusted returns of the banking industry will rise. Not insignificantly, broadening the securities powers of banks should also result in somewhat greater economic growth.

It cannot be denied that U.S. commercial banks are falling down on the job of managing credit risk. Current loan charge-offs for the average U.S. bank are more than 50% higher than at comparable stages of past business cycles, and the nonperformer ratio, though down from its peak in the mid- to late '80s, is still nearly twice what it was at the beginning of the '80s.

The Need to Update

The most plausible explanation for the deterioration in bank loan-monitoring capabilities emphasizes the interplay between changes in the external environment and the internal managerial reaction to these changes. In brief, it is argued that as the economy has become more volatile, the half-life of usable credit information has greatly shortened. In other words, the business fortunes of borrowers are changing far more rapidly than in the past, requiring banks to update their credit files more frequently.

Yet, as deregulation has eroded its profitability, the banking industry has become increasingly reluctant to allocate the funds needed to gather credit information in a timely enough fashion. Lacking current information, banks have been unable to identify credit problems as rapidly as they once did.

And, indeed, preliminary evidence suggests that the public marketplace is now more alert to deteriorating credit conditions than are many banks. In cases where borrowers have publicly traded debt as well as bank loans, the market often moves to lower debt ratings or bid down bond prices before the banks act to downgrade their internal loan ratings. Either the banks get the information after the marketplace or they get it before but somehow fail to act on it.

Early-Warning Capabilities

How will the acquisition of investment-banking powers improve the loan-monitoring capabilities of commercial banks? In countries like Germany, Austria, and Switzerland, where there is universal banking – i.e., no separation between commercial and investment banking – and in Japan, where there is a high level of de facto integration between finance and commerce, the job of loan monitoring turns out to be quite a bit easier than in the U.S., points out Randall Pozdena, a vice president of the Federal Reserve Bank of San Francisco.

Being more closely tied to their borrowers, banks in these countries are apparently able to spot credit problems at an earlier stage than American banks. They are also able to take steps, including the removal of company managements, to correct these problems before they result in loan defaults and bankruptcies.

Pozdena argues that whereas a U.S. commercial bank's means of controlling adverse borrower behavior "are limited to invoking loan covenants and withdrawing loan funding, the underwriting relationship available to a universal bank enhances this channel of influence, since a company that performs badly on its loans is also at risk of losing access to reputable underwriting and hence to nonbank sources of funds."

Even more significant, the fact that the universal banks of Germany and the Japanese banks are able to own the equity of those to whom they lend immeasurably reinforces their "channels of influence." As equity holders, lenders can participate directly in a company's management, thereby influencing the decisions to take on risk. Says Pozdena: "In essence, holding some of the equity helps offset the incentive borrowers always have to take advantage of lenders by taking on riskier projects than these lenders anticipated."

An Irrational Fear

It is claimed that borrowers benefit from having stronger lenders. Why is it that the U.S. is the only major country with a venture-capital industry and a junk-bond market? Part of the answer, opines Pozdena, is that weak-collateral, low-net-worth U.S. firms often find it insuperably difficult to get adequate bank financing.

By contrast, in countries that allow universal banking, bank financing tends to be more readily available to the less well-heeled. Having greater influence over the management of these firms, foreign banks are much more comfortable lending to them than are their American counterparts.

So borrowers should welcome broader powers for lenders. However, some who claim to speak for them and for the public interest do not. Fearful of bank dominance of the economy, many Americans would be loath to end the separation of banking and commerce.

Yet this separation may be costing us more than we know. Economic historians attribute the rapid pace of development in Germany and Japan at least partly to the close relationship between industrial and financial firms. What's more, this relationship may have promoted more stable as well as faster

FUNNY MONEY/*By Tom Leander*

Arbor Day

Some financial institutions give away toasters to attract business. But American Mortgage Banking, Westbury, N.Y., has added a new twist to the giveaway craze by handing out trees.

With great fanfare, the Long Island mortgage company announced last week that each loan customer will receive "a two- to three-year-old deciduous shade tree with a one-and-a-half-inch trunk diameter." The customers will be encouraged to plant the trees in a drive to save the nation's tree cover.

The program, which the company says has been in the making for six months, was planned to coincide with a call from President Bush last week to increase the nation's tree cover by a billion trees a year for the next 10 years.

Bum Sets His Sights

After learning that thinking big can lead to disaster, H.R. "Bum" Bright is thinking small.

The crusty Texan combined InterFirst Corp. and RepublicBank Corp. to create First RepublicBank Corp., a $33-billion asset behemoth that subsequently failed.

H.R. 'Bum' Bright

Later he formed the $4 billion-asset Bright Banc Savings Association, by merging several small Texas thrifts. That institution also failed.

Now Mr. Bright has set his sights on the $7.1 million-asset State Bank and Trust Co., Dallas, the smallest bank in town.

But as befits his audacious personality, Mr. Bright is undaunted by the First Republic and Bright Banc catastrophes, and is intent on rebuilding his personal fortune.

"I'm looking to create a new garden," said Mr. Bright, "not dig through the garbage pail of the past."

— **Steve Klinkerman**

Is His Name Next?

Despite record earnings and a loyal customer base, a small commercial bank in Encino, Calif., has decided to change names to fix its public image problem. Lincoln Bancorp has been deluged by calls from customers who mistake it with Lincoln Savings and Loan, the Irvine thrift seized by regulators last year.

John J. Keating

"We've been pummeled by the bad publicity," says the bank's president, who admits that his own name, John J. Keating, may have added to the confusion.

* * *

Last Rites

Responding to the wave of fraud within his own industry, Henry A. Berliner Jr., president of Second National Federal Savings of Salisbury, Md., has suggested a "Dying Mother Test" for executives who face a tough ethical decision.

H.A. Berliner Jr.

In a speech to University of Michigan students Tuesday, Mr. Berliner asked executives to imagine that "the proposed course of action was the last thing that your dying mother heard from your lips. Would she approve?"

Mr. Berliner added that sharp practice in American finance has turned the phrase "business ethics" into an oxymoron like "military intelligence" and "healthy savings and loan."

* * *

Hooked

Federal Reserve Bank presidents rarely show their emotions in public, except when arguing issues relating to monetary stability.

E.G. Corrigan

But New York Fed President E. Gerald Corrigan was positively beaming following his remarks Monday night in Washington before the Financial Women International. Following his after-dinner dissertation on the need for financial restructuring, the officers of the trade group rewarded Mr. Corrigan with a bag of brand-new fishing lures.

"This is terrific,"gushed Mr. Corrigan, a devoted fisherman, holding up a DareDevil lure. "This will catch just about anything."

SMALL BUSINESS

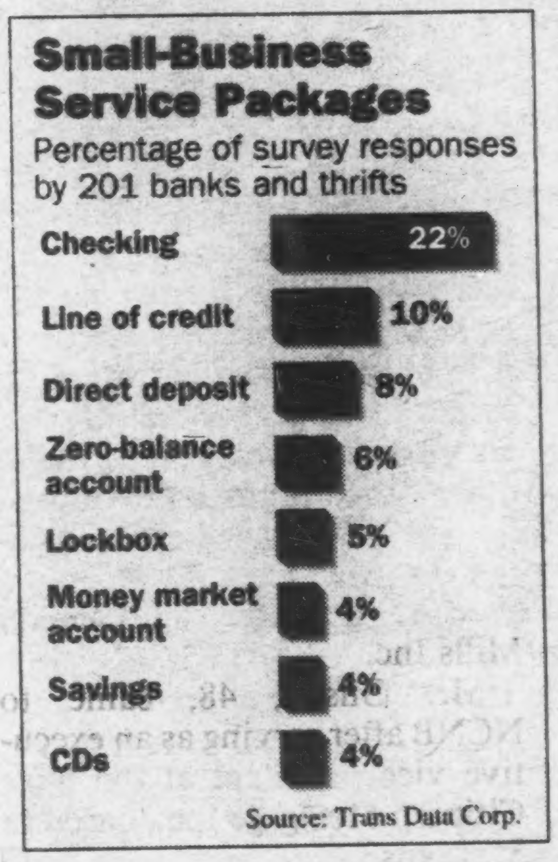
Large Banks Ardently Court Corporate Market's Low End

By LAURYN FRANZONI
Special to the American Banker

After years of neglecting the low end of the corporate market, larger banks are beginning to group services into attractively priced packages to win small-business accounts back from their own smaller competitors.

In the process of pursuing big and prestigious accounts, banks with more than $2 billion in assets have largely ignored the needs of small businesses, analysts say. Start-up banks and independents filled the breach.

But that is all beginning to change. Banks with $4 billion and more in assets are twice as likely to offer special service packages as banks with assets of $2 billion to $3.9 billion, according to research by Trans Data Corp., an *American Banker* affiliate in Wayne, Pa.



Small-Business Service Packages
Percentage of survey responses by 201 banks and thrifts

Source: Trans Data Corp.

Regional differences also come into play. Institutions in the north central and western states are more than twice as likely as their southern counterparts to offer special account packages for small businesses.

Of 200 banks and thrifts interviewed for the survey, 15% said they offered packaged services. The five products most likely to be included are commercial checking (by 22%), lines of credit (10%), direct payroll deposit via the automated clearing house (8%), zero-balance accounts (6%), and lockbox (5%).

Among the institutions offering packaged services, nearly half – 48% – indicated that their packages are specially priced, while 38% selectively discount the packages. But pricing alone does not move market share.

A 'Relationship Sensitive' Market

"While it is a price-sensitive market, we believe it is also the most relationship sensitive," said Kathleen C. Holmes, executive vice president of Furash & Co., Washington. Ms. Holmes has helped financial institutions review their product strategies for the small-business market.

"The bank has to help the small business to get ready to do business with the bank," she said. "That means standardized loan documents, standardized loan products packaged for access by the customer."

More than one-third of the institutions surveyed by Trans Data said they offer advisory services to their small-business customers. Banks are more than four times as likely as thrifts to provide these services.

Bankers in the North Central region are doing more to educate customers than those in Middle Atlantic institutions. Sixty-two percent in the northern region reported offering advisory services such as financial planning, marketing, and advertising advice, compared with only 19% of the institutions in the Middle Atlantic region. The most commonly offered advice is payroll management. Other popular services include employee-benefits planning, tax planning, accounting and legal advice, and personnel counseling.

Three-fifths of all banks and thrifts offer this advice separately for a fee, while 18% offer it at no additional cost to depositors.

Few Offer Specialized Branches

These advisory services are more likely to be offered to customers than are special, "small-business-only" branches, which are operated by only 4% of those surveyed. And only 1% said they have special small-business facilities within branches to serve this target group.

Whether the dedicated branch becomes more prevalent will depend on where the small-business group falls within bank management structures. The Trans Data research and other surveys indicate that the industry is split fairly evenly at this point over the placement of small-business units.

Banks that already have a dedicated small-business staff are far more likely to offer dedicated facilities and services than those that still service small-business customers from within existing lending groups.

Profitability Gets Good Rating

Even though these customers are now demanding more services and attention, about half of banks and thrifts rate the profitability of their small-business operations as "good to extremely good."

"Frankly, if you use good quantitative analysis, process management, and solid product engineering, the margins in this business should be substantially fatter than corporate services," said Wells Fargo executive vice president Douglas Freeman. "The challenge is to be careful so loan losses don't erode the margin."

U.S. Card Concerns Target Europe

Small Businesses Expected to Thrive, Need Services

By ELLEN MEMMELAAR

NEW YORK — Major U.S.-based credit card companies are setting their marketing sights on the European Community's burgeoning small-business market.

Sources close to Visa International said it will launch a card this month with add-on services tailored to smaller European companies.

And American Express Travel Related Services Co., which has promoted a small-business card service in Britain for six years, is preparing advertising campaigns for selected markets on the Continent as well.

MasterCard International, which has a strong business card effort in the United States, is also expected to expand in Europe.

Diners Club International is looking into the small-business market, said John Stout, London-based vice president for marketing in Europe, the Middle East, and Africa. But the Citicorp travel-and-entertainment card subsidiary "is a long way off from a pan-European product designed for small businesses," he said.

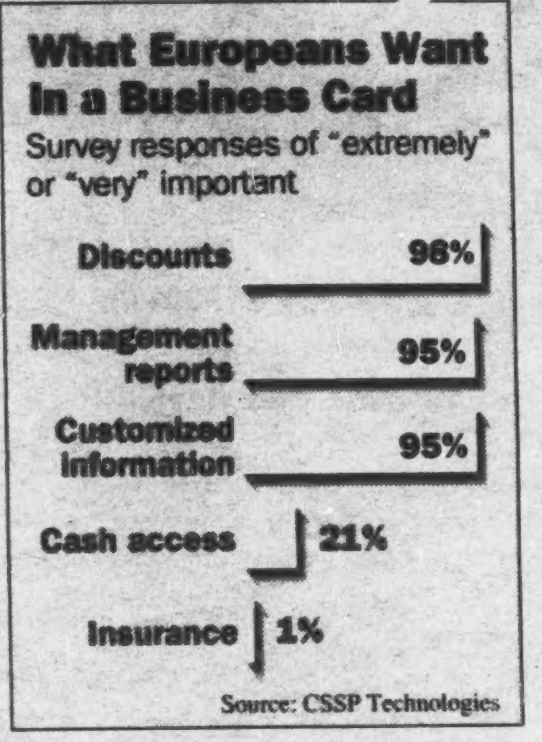
The economic unification of the 12-nation European Community in 1992 is seen as boosting small-business growth.

Already, Europe is seeing an entrepreneurial boom like that which hit the United States in the 1980s. The community has 25 million small businesses, accounting for more than 95% of all companies, according to Russell Prince, president of CSSP Technologies, a New York-based consulting company.

Raising Venture Capital

The 12 nations raised more than $5.1 billion in venture capital in 1987, which is $200 million more than U.S. companies raised the same year.

The removal of tariffs and border restrictions will give smaller businesses easier access to a market of 320 million people – which is larger than either the United States or Japan.



What Europeans Want In a Business Card
Survey responses of "extremely" or "very" important

Source: CSSP Technologies

"The removal of barriers will help small businesses exploit other markets over the long term," said Richard Cullen, head of product development at Visa in London.

Small-business spending on travel is $150 billion a year, not including $200 billion for restaurant and gasoline bills, according to Mr. Cullen.

Mr. Prince said about 17 million Europeans incur business expenses and 97% of small-business owners would now acquire a credit card, provided its annual fee were not significantly higher than those on personal cards. He based his conclusions on a survey of 387 small-business people in six nations.

"Big, private-sector industries do not exist in a lot of these places now, so the economy will be driven by smaller businesses," said Mr. Prince. He estimated that Europe would see $1.5 trillion in total purchases by small businesses between now and 1992.

But marketing of credit cards aimed at small to medium-sized businesses is almost nonexistent. Few such products exist, and their structures vary widely by country and bank.

The Visa product, although not mandatory for association members, will unify products under a single logo and marketing approach, said Mr. Cullen.

The Visa card will come with a variety of travel and entertainment benefits, including an emergency message service and document-courier service anywhere on the globe.

In Britain, American Express recently made membership in the Royal Automobile Club automatic for business customers, giving access to a nationwide repair service.

A Banking Connection

Visa's focus on the business-card market is not new. Eight months ago, it launched a management information system called the Business Card Response System. This gives detailed reports on expenditures by company employees.

Asked about his competitors, Mr. Cullen said neither American Express nor Diners Club has access to the 2,500-bank European network that Visa does or the banking relationships that go with it.

"You don't want to sell a credit card. You want to sell a package of services," said Mr. Prince, the consultant. "Small companies are always looking for information that will better enable them to handle their businesses."

Indeed, information services came up as one of the most valuable characteristics of a credit card product in a survey of European small businesses done by CSSP Technologies.

Customized Newsletters

Mr. Prince said he advocates customized newsletters to deliver information to European cardholders. Businessmen are very concerned about financial matters, products, and services that relate to their industries, the survey found.

A newsletter "can be cost-effective, and the fact that you offer a service at break-even makes you look so much the better," he said.

Research by Mr. Prince also showed that European businessmen prefer one multipurpose card to a variety of credit, debit, and check-cashing cards. The best card, he said, would be usable for any type of payment and would be tied to an interest-bearing money market account. □

Foreign Rates, Inflation Fears Hobble the Fed

By ROBERT TRIGAUX

ANALYSIS: *Follow-up on the news*

WASHINGTON — Fears of inflation in the United States and continued high interest rates abroad appear to have all but killed opportunities for the Federal Reserve to ease its monetary policy anytime soon.

The Fed, whose Federal Open Market Committee met last week to set credit policy, will continue to target the federal funds rate at 8.25%, despite signs that the economy is continuing to droop, analysts forecast.

James P. Winder, economist at Merrill Lynch Capital Markets, believes "monetary policy was left unchanged at the FOMC meeting last week."

"Concerns about inflation at home and rising interest rates abroad give policymakers no room to address the weakness in the U.S. economy," he said.

Wholesale prices surged 1.8% in January, the biggest jump since the 1974 energy crisis and again fueled by a huge increase in oil and gas prices, the government said Friday.

With such inflationary numbers, "How can the Fed ease?" asked Robert A. Brusca, chief economist at Nikko Securities Co. International in New York.

Adding to rate pressures are Japan and West Germany, whose high rates make it even more difficult for the Fed to lower domestic rates and still attract needed foreign investors. Japanese rates are expected to inch upward in anticipation of its Feb. 18 elections. West Germany, suffering a recent bout of inflation and the added instability of East Germany's future, is expected to keep rates high.

Bad News for Banks

Such pressures on the Fed to keep rates up will hurt financial institutions hopeful that further easing in the near term might avoid a recession and spur credit demand. But, some analysts argue, higher rates may help those institutions by bolstering a nervous bond market that views any further Fed easing as a sign that it is caving into recession fears before it has gotten a handle on inflation.

"The Fed will not move on its short-term policy," said Richard C. Trainer, vice president and senior economist at the Bank of Tokyo in New York. "If the Fed eases too soon, and breaches Greenspan's gradualism of monetary policy, it will trigger the psychology of worsening in-

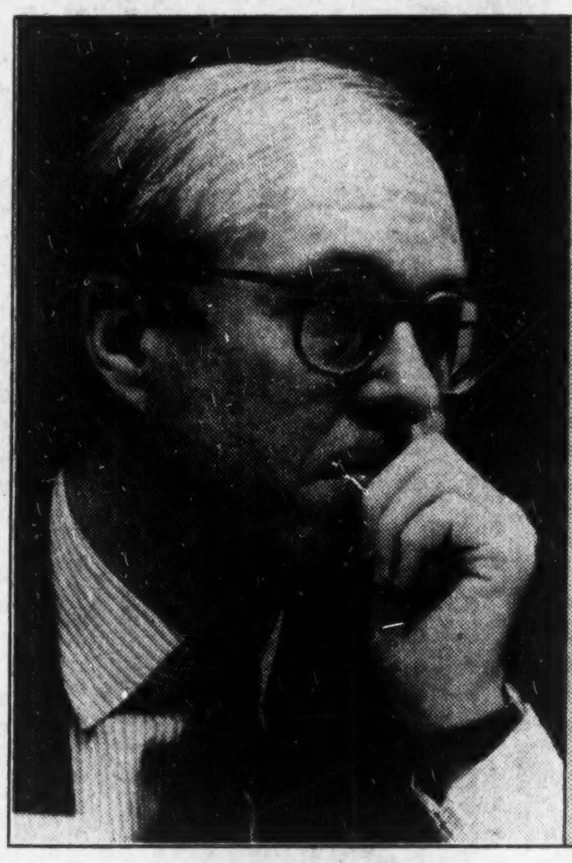
Kearney Exit Seen as Blow to RTC

Resignation Cuts Credibility of Bush S&L Cleanup



Kearney's RTC Woes

- **Bureaucracy and infighting mired the agency.**
- **A dispute on how to raise working capital has dragged on for months.**
- **Red tape discouraged investors, slowing S&L sales.**
- **Key RTC posts remain unfilled.**

Louise Krafft

By BARBARA A. REHM

WASHINGTON — Daniel P. Kearney's abrupt resignation Friday from his job overseeing the Resolution Trust Corp. is being viewed as the latest and most embarrassing proof yet that the government's blueprint for cleaning up the thrift industry is seriously flawed.

Critics have lashed out at the RTC almost since its inception last summer, saying bureaucracy and infighting were crippling efforts to sell or liquidate billions of dollars of seized thrift assets. Mr. Kearney's departure, because of what he considered excessive interference by the Treasury Department, deals a severe blow to the government's already low credibility.

"The disarray and the indecision are now publicly evident and this will do nothing but increase the cost of the bailout and delay the resolution of pending cases," said Rep. Henry B. Gonzalez, chairman of the House Banking Committee.

The Texas Democrat added that the resignation is "more evidence of the growing disarray in the Bush administration's implementation of the savings and loan bailout."

Exit May Firm Anti-RTC Mood

John D. Hawke Jr., a partner with Arnold & Porter, said Mr. Kearney's exit might help consolidate opinion that the organization set up to implement the bailout is the very thing that is keeping it from occurring.

"There is need to revamp the structure," he said. "It is such a cumbersome operation that it has really become catatonic."

Mr. Kearney's resignation as president and chief executive officer of the RTC oversight board, which sets policy for the agency, stemmed from a dispute with senior Treasury officials, especially John Robson, the deputy secretary.

"I have concluded that the role of president and CEO does not currently afford me the authority that I believe is essential

Rival Thrift Trade Groups Talk Merger – Informally

By WENDY GROVER

NEW YORK — Facing rapid declines in membership, the two rival thrift trade associations are considering a merger.

Officials of the U.S. League of Savings Institutions and the smaller National Council of Savings Institutions said last week that they are discussing a merger only in a preliminary way. The idea may gain momentum this week when several thrift executives plan to confer in New York.

"We'll talk about it as individuals," said National Council chairman David Sullivan. They will not officially represent the trade groups or their individual members, he said.

Necessity Presses Them

Although officials said a formal merger agreement is not imminent, the two organizations may reconcile their longstanding policy differences out of necessity. Each association has lost well over 100 members this year, from Jan. 1 totals at the U.S. League of 2,754 and at the National Council of 479.

"When you've tried to promote your own services as superior, it takes a little time to change the attitude and say, 'Maybe these are our friends, and we should join them,' " said Kenneth Seaton, chairman of the U.S. League, in an interview.

The Possible Partners

Bank Helps Crack a Laundering Operation

By KAREN GULLO

NEW YORK — Employees at a branch of Key Bank in Newburgh, N.Y., helped drug enforcement agents crack a major money-laundering operation in New Jersey with ties to Panama and Colombia, a federal prosecutor said Friday.

U.S. Attorney Samuel A. Alito Jr. in Newark, N.J., said the bank's actions were instrumental in bringing charges against 25 people and five international corporations for conspiring to violate U.S. currency laws.

Federal officials said that if the charges are proved, it will be the largest money-laundering crime ever prosecuted in New Jersey, but they did not disclose the total dollar amount.

Conviction Last Year

The U.S. attorney last year won a conviction against Roberto Calleja, a former manager of the Forest Hill office of First Fidelity Bank, Newark, for helping to launder an estimated $6.5 million to $11 million between 1982 and 1985.

Mr. Alito said one of the defendants in the current case mailed $73,000 in checks and money orders to the Key Bank office, requesting that they be deposited in an account held by Paulina DeQuintero, a Colombian woman. Suspicious bank employees contacted the Internal Revenue Service in Albany,

PEOPLE *in the news*

Sense of Humor Misfires For a Top Money Manager

By KENNETH CLINE

ATLANTA — William R. Hackney 3d is best known by friends and acquaintances for his sense of humor. But last week he wasn't doing much laughing.

The chief investment officer with First Union Corp.'s capital management group wrote a tongue-in-cheek article for the bank's investment newsletter "Vision" in which he referred to Germans as "Huns" and Japanese as "Nips." Mr. Hackney intended to satirize American fears of foreign investment, but some readers missed the point and complained about the unflattering terms he used for two of the top trading partners of the United States.

The Charlotte, N.C.-based banking company later apologized for the article.

A First Union spokesman said Mr. Hackney, 41, would not be available to speak with reporters. But friends and acqaintances of Mr. Hackney said he is well known for his sense of humor and probably never intended to offend anyone.

"Everybody that knows him knows that's not the way he meant it," said Clifton McIntire, a broker with Shearson Lehman Hutton in Charlotte.

A stock analyst, who did not wish to be identified, said he remembered Mr. Hackney from the late 1970s, when he had handled First Union's investor relations. "I think he's perceived as someone who has a sense of humor and is given to writing that way," the analyst said. "As I recall, he's outspoken, and I think we had some laughs."

Mr. McIntire worked with Mr. Hackney at E.F. Hutton from 1980 to 1982, when Mr. Hackney was Hutton's regional research director in Charlotte. The two men remained friends after Mr. Hackney returned to First Union, where he had worked in the trust division from 1974 to 1980, and have talked since the newsletter flap became public early last week.

"He's a good guy, very level-headed, and sorry they took it that way," Mr. McIntire said. "I wouldn't say he's upset about it, but no one likes people to misinterpret them, and if there was some misunderstanding out there, he would be bothered by that misunderstanding."

According to Mr. McIntire, Mr. Hackney uses satire in his newsletter articles to simplify complicated financial issues. "He's always got something in there of trying to use an analogy that somebody can understand to get his point across," Mr. McIntire said. "Most of the people that follow him like him and understand what he means."

Since 1982, Mr. Hackney has managed First Union's capital management group, where he is ultimately responsible for $7 billion in common stock, bond, and money market investments for individual, corporate, and institutional clients.

The group's equity fund performance has placed it among the top 10% of money managers nationally during the past five years, according to First Union. Mr. Hackney's articles in the *Vision* newsletter are intended to provide investment advice.

A native of Charlotte, Mr. Hackney earned a bachelor's degree from the University of North Carolina at Chapel Hill. He earned a master's degree in business administration from the Citadel while serving as an officer in the U.S. Marine Corps. He is a chartered financial analyst. □

Feud Brews Over Stock in Freddie Mac

By PHIL ROOSEVELT

NEW YORK — A move by the Federal Home Loan Mortgage Corp., or Freddie Mac, to retire some its stock has pitted the agency in a bitter war of words with the 12 Federal Home Loan banks that hold the shares.

The presidents of the banks are calling Freddie Mac selfish and uninformed. The mortgage agency, in turn, says the presidents are ungracious.

At issue are 100,000 shares of nonvoting stock in Freddie Mac that were issued to the 12 banks in 1970 for the mortgage agency's initial capitalization. Saying the original purpose of the issue has been served, Freddie Mac last week announced it would retire the stock – at the original price of $1,000 a share.

The 12 presidents claim the repurchase should reward their banks with some substantial price appreciation – though they do not specify how much.

Brendsel Cited

Thurman C. Connell, president of the Federal Home Loan Bank of Des Moines and head of the caucus of Home Loan bank presidents, took direct aim at Freddie Mac's chairman and chief executive.

"When Leland Brendsel, the newly elected board chairman, boasts that Freddie Mac has made enormous strides in 20 years, he neglects to state that his board has chosen to ignore the interests of the very Home Loan banks that gave birth to Freddie Mac," Mr. Connell said in a statement distributed on behalf of all the presidents.

A Freddie Mac spokeswoman said, "We take extreme exception to [the presidents' statements] – not only to their arguments, but to the tone." The statements, she added, are "extremely ungracious." □

Marine Midland Posts A $120 Million Loss

By GORDON MATTHEWS

NEW YORK — Marine Midland Banks Inc. posted a fourth-quarter loss of $119.9 million after more than doubling its provision for loan losses. For the full year, the company had net income of $13.9 million, down 91% from a year earlier.

Marine Midland's provision in the quarter was $263.3 million and included a $175 million special reserve against domestic loans. A bank spokesman declined to say what portion of this concerned highly leveraged transactions.

In the quarter a year ago, the provision totaled $102.6 million. That included an added reserve against foreign loans.

Move Is Explained

Marine called the move a "prudent step to insure that Marine's domestic loan-loss reserve remains appropriate in light of uncertainty in the economic outlook." Without the special charge to profits, net income would have been $43 million in the fourth quarter and $177 million for the full year.

Marine said the weak commercial real estate market was responsible for most of the $245 million increase in fourth-quarter nonperforming loans compared with last year's figure. The bank also said the higher level of fourth-quarter chargeoffs was primarily attributable to commercial real estate loans.

In both the quarter and the year, Marine said basic banking franchise posted strong gains, and that income from fees and services charges was higher while operating expense growth was moderate.

Marine is wholly owned by Hongkong and Shanghai Banking Corp. The $27 billion-asset company is the nation's largest foreign-owned banking subsidiary. □

Corrections

Page one articles on Feb. 8 and Feb. 9 incorrectly reported how regulators are defining highly leveraged transactions. A loan must be classified as financing a leveraged transaction in two cases: when it pushes a company's liabilities higher than 75% of its assets, or when a company's total debt doubles as a result of the loan and its total debt exceeds 50% of assets.

■

A Feb. 9 article ("Fuji's Heller Taking Stake in Hungarian Merchant Bank," page 10) misstated the capital of a new Hungarian merchant bank in which Heller International Corp. will be taking a stake. The correct amount is $16 million. □

Bankers Scorn Stock Shifts, But They Can't Ignore Them

As bankers follow the market prices of their companies' stocks every day, many must feel they are living in a horror movie.

Prices have tumbled so rapidly that some banks have seen their stocks drop by one-third in value in a couple of weeks – wiping out gains slowly built up over several years. And most bankers whose equities have been hit have every reason to ask: "Has our operation been so bad as to justify this debacle?"

To this observer, at least, the answer is a resounding "No."

Trampled by the Herd

Surely, some banks' loan losses and operating performance have justified their sharp declines in share price. But in far too many instances, the declines have simply resulted from the fact that the banks are in territories where other banks are in trouble.

What we have seen, then, is a vindication of the old adage: "When they raid the sporting house, they take the piano player, too."

Why?

What has to be remembered as we analyze today's bank stock market is that trading in most shares is extremely thin, making prices highly volatile. In some instances, buying or selling as little as $25,000 worth of the stock in a multibillion-dollar thrift or bank can move the share price 5% or more.

Market Makers Vulnerable

One can't blame the market makers. They can lose their shirts holding a thinly traded bank stock if demand for it dries up and sellers keep calling them.

'When they raid the sporting house, they take the piano player, too.'

Thus, they protect themselves by lowering the quote.

But other factors also make bank shares highly volatile, especially on the downside:

- Pension fund managers hate to admit they have held a loser. Thus, they dump those stocks before a statement date, no matter the price they get. (Often, they buy back the same stocks at higher prices as soon as the shares return to favor.)
- People take losses for tax purposes – a major factor in December's bank stock disaster.

- Short sellers then see profits in dumping bank shares they don't own – exacerbating the decline.
- Finally, brokerage firms and brokers urge sales once a stock goes "south" – because this gives them transactions to recommend that can generate sales and commissions.

Impact on Performance

What do these factors mean for a bank, its long-run viability, and performance?

Many top bank executives say stock movements mean nothing. In this regard, I remember a CEO who was glad when the local papers stopped quoting his stock's price in the era before NASDAQ; he got fewer complaints from shareholders when they could no longer follow the issue.

But acute bankers worry about declines in share prices for several reasons:

- They penalize shareholders who must sell and employees whose retirement income is based on share price at the time they close out their profit-sharing programs.
- They hurt employee morale and tarnish a bank's image in the minds of many in the community.
- They make some holders of large deposits – above the Federal Deposit Insurance Corp. insurance ceiling – become wary and withdraw funds.
- They make it almost impossible to raise new capital without serious dilution of shareholder equity – making it harder to meet regulatory capital requirements.
- And they make buying the bank more tempting to other banks and to nonbanks interested in tendering for the shares and capturing control.

What Can Be Done?

What can a CEO do about this problem? Most say, "Very little." Yet this can be when years of effort to build a solid base of shareholders truly pay off.

Unfortunately, hardly any banks set the stage for this payoff by explaining, while share prices are rising, that price movements are insignificant to their overall operations.

It is ironic that one of the most important points of public contact – the marketplace for a bank's shares – is virtually out of the banker's control. All he can do is follow his own stock in the paper and on the screen.

But while bankers would like to explain to the public that what happens to share prices really does not reflect the bank's long-range prospects, it is frequently hard to sell this to the public when stock prices fall. ☐

"SOUND OFF"

South Africa recently announced it would negotiate to free long-time political prisoner Nelson Mandela and lift a 30-year-old ban on the African National Congress in the hope of ending the country's status as an international pariah. Suzanne Christy, of the American Banker's feature's staff, asked:

Q How far must South Africa go in easing repression before the U.S. government should allow banks to resume lending there?

Mark Goebel
Director of Communications
Institute of International Bankers

Before the U.S. even considers lifting economic sanctions, South Africa has to incorporate and share power with the black constituency. Then they have to set out a clear plan on how they will make this happen. What we have so far are promises.

We shouldn't even be talking about lifting sanctions yet. Instead, the U.S. government should use further economic leverage as a carrot to encourage South Africa to set forth a concrete plan.

In certain aspects, the situation is similar to the one in Eastern Europe. Both have gotten over the hurdle of deciding that changes need to be made.

But superficial changes are not going to placate the world or get the sanctions lifted.

Donna Katzin
Director
South Africa Interfaith Center
on Corporate Responsibility

I don't see banks trying to reenter markets they have left. If anything, the situation is more volatile than ever before. We shouldn't even consider investment until a substantial move to nonracial democracy has been made.

There is some real question about the authenticity of the changes. Even if they release Nelson Mandela, that does not mean he can live as a free man, nor can any of the 28 million blacks.

The challenge is not to lift the sanctions, but to increase pressure in a meaningful way so South Africa is forced to move toward peaceful change. It is a delicate situation. If the abolition of apartheid is not forthcoming, there are no guarantees that the road will remain open to peaceful change.

We cannot let the South African regime get away with cosmetic or window-dressing type of changes.

A bill that would increase sanctions is now moving through [a] House Banking subcommittee, and would affect both overseas and U.S. banks and oblige banks to increase their pressures in a time-triggered fashion.

Even though there is no new lending permitted, U.S. banks play a key role in facilitating South African financial transactions. Banks that are creditors to South Africa can convert their short-term debt into 10-year loans, which they have been renegotiating. This postpones the action on apartheid by taking off the immediate pressures on Pretoria. We consider additional time to be the fundamental equivalent of new credit.

Salih Booker
Staff consultant
House Foreign Affairs
Subcommittee on Africa

The Anti-Apartheid Act of 1986, which included the prohibition of lending to the South African government, is very clear on the conditions that must be met to terminate the sanctions. Basically, there are five conditions: political prisoners must be released; the state of emergency must be lifted; political parties must be unbanned; the Group Area Act and Population Registration Act must be repealed; and an agreement must be reached to enter into good-faith negotiations without preconditions.

The President can also suspend or modify any or all of the conditions. Congress has 30 days to disapprove his actions.

But I don't see any pressure developing to lift sanctions even now.

Roger Wilkins
Professor and chair of history
George Mason University

We shouldn't even be thinking about lifting the economic sanctions. When they were first imposed, critics said they would harm those people we were trying to help. Well, they were obviously wrong. These sanctions have had great impact on forcing the South African government to the table on issues of political freedom.

While South Africa is not there yet, talking is better than shooting. The momentum is there, and we can't turn the clock back. If [President F.W.] de Klerk does not move ahead, there is bound to be even more bloodshed.

There is a new South Africa about to be born. And the American business community should want to end this uncertainty and see South Africa settle down and normalize as soon as possible. If I were an American businessperson, I wouldn't be in any hurry to lift the sanctions. ☐

Big Bank Profits Hurt by Provisions

By L. MICHAEL CACACE

NEW YORK — Net income of the nation's 25 largest bank holding companies plunged 91% last year, as many of these banks took special loan-loss provisions in the third and fourth quarters to offset loans to restructuring countries and troubled domestic real estate loans, according to an *American Banker* survey.

As a group, the top 25 banking companies earned $1.1 billion in 1989, compared with $11.9 billion in 1988. Twelve of the top 25 reported special loan-loss provisions totaling $11.1 billion. Of the 12, eight reported losses for the year.

J.P. Morgan, the nation's fourth-largest banking company, posted the the largest loss, $1.275 billion for 1989. This loss included a $2 billion third-quarter provision for losses on lesser-developed-country debt.

The troubled Bank of New England Corp., Boston, with an estimated loss for 1989 of $1.05 billion, posted the second-largest loss last year. The company expects to make a $1.5 billion loan-loss provision in the fourth quarter.

Security Pacific Corp., Los Angeles, was the top earner last year, with net income of $740.6 million, up 15.9% from the year before, when it ranked seventh.

The nation's top earner in 1988, Citicorp, saw earnings plunge 71% to $498 million last year. The decline was attributable to its $1 billion fourth-quarter writedown of LDC debt.

Citicorp remains the largest U.S. banking company, with assets of $230.6 billion at year-end 1989, up 8.9% from a restated $211.7 billion the year before.

As a group, the top 25 bank companies posted a rise in assets of 7.5% last year, to $1.39 trillion. The group's net income for the first quarter totaled $3 billion, up 7.9% from the comparable period in 1988.

Bogus Land Sales Cited in Hearings On Lincoln S&L

By BILL ATKINSON

WASHINGTON — The third round of court hearings began Friday in the highly charged case between Lincoln Savings and Loan Association and the Office of Thrift Supervision with testimony that Lincoln used numerous real estate transactions to generate earnings through alleged sham sales of land.

Testimony is expected to be heard well into this week as Lincoln, which is based in Irvine, Calif., brings in a platoon of expert witnesses to rebut charges that the S&L used shady accounting methods in 15 major real estate transactions.

The failed thrift, a subsidiary of American Continental Corp., Phoenix, went into conservatorship last April and a month later sued the thrift office and its former chairman, M. Danny Wall, in U.S. District Court in Washington, charging that the takeover damaged Lincoln and reduced its net worth.

On Friday, Roger A. Johnson, a partner in Kenneth Leventhal & Co., which conducted a review of the 15 real estate deals, reiterated previous assertions that Lincoln used the transactions to generate earnings through alleged land flips and sham sales. Mr. Johnson testified before Judge Stanley Sporkin at the U.S. District Court for the District of Columbia. □

Rival Thrift Trade Groups Discuss Merger

Continued from *page* **1**

"We should be moving into a time when there's a greater opportunity to merge than before."

Mr. Sullivan of the National Council, in confirming the meeting for merger talks, cautioned that it is not necessarily "an indication of any merger."

Informal Discussions

In addition to Mr. Sullivan, who is president of Mechanics & Farmers Bank, Bridgeport, Conn., the informal meeting this week will include Robert B. O'Brien, chairman and chief executive officer of Carteret Savings Bank, Morristown, N.J., and Harry W. Albright Jr., chairman and chief executive of Dime Savings Bank of New York, Garden City.

The Dime, like several other sizable thrifts, belongs to both groups. Mr. O'Brien, vice chairman of the U.S. League, is past president of the National Savings and Loan League, a predecessor of the National Council.

Mr. Seaton, the U.S. League chairman who is also chairman and chief executive of D&N Savings Bank, Hancock, Mich., said the consolidation idea had come up in "informal discussions" in recent years. Executives who are active in both associations acted as liaison between the leadership groups, he said.

Split on Thrifts' Edge

On legislative issues, the U.S. League has generally supported preservation of a distinct thrift industry, but the National Council has advocated rules that put thrifts on a more equal footing with banks and other financial institutions.

Calling for unity, Mr. Seaton said, "the perception is still there that we were beat up" by last year's thrift-reform legislation.

The industry's shrinkage – with some members seized by regulators or merging out of existence – may put an end to the thrift trade groups' longstanding fragmentation. Before formation of the National Council in 1983, the industry had three associations.

The U.S. League, older and bigger of the two survivors, suffered a 10% drop in membership last year. Another 179 institutions have notified the league that they will not renew their memberships this year, and the total is expected to go higher.

"Membership is declining, and we planned and budgeted for that decline," said James Grohl, senior vice president at the U.S. League. The group also reduced its staff by 50, to 450.

The National Council, which is dominated by northeastern institutions from the former National Association of Mutual Savings Banks, has lost 120 members this year and gained nine. The council, with a current staff of 55, recently laid off 13 workers and decided not to fill eight other vacancies. □

Inflation Fears Put the Fed in a Bind

Continued from *page* **1**

flation." Mr. Trainer, a former economist at the Federal Reserve Bank of New York, said the fed funds rate, now targeted by the Fed at 8.25%, will be stuck there for at least another six weeks – unless dramatic signs emerge of a decline in the domestic economy.

Indeed, not all FOMC members are eager to ease. According to the minutes released Friday of its Dec. 18-19 meeting, Fed Governor Wayne Angell and Federal Reserve Bank of St. Louis President Thomas Melzer dissented from the majority and insisted that the Fed not ease its policies.

Analysts noted hopefully that rising rates in the U.S. may have plateaued. Last week's successful quarterly refunding by the Treasury attracted a participation rate by foreign investors of only 23% – the lowest in two years. This signals that although global investors are shopping for rates, U.S. investors were satisfied with Treasury rates. □

Bank Helps Nail Laundering Ring

Continued from *page* **1**

N.Y., which touched off a further investigation.

The attempted deposit came to the bank in an Express Mail package with the return address of the laundering ring's alleged central figure, Julio Montes Cardona of Piscataway, N.J. When Mr. Cardona called Key Bank in June 1989, seeking return of the funds, the bank refused to send them back.

Ms. DeQuintero later authorized Key Bank, a subsidiary of Albany-based KeyCorp, to return the money. The bank issued Mr. Cardona a check for the account's $16,331.18 balance, but the IRS seized the $73,000 in checks and money orders.

The arrests last week were the result of a nine-month undercover investigation into a complex scheme involving millions of dollars in illicit drug profits laundered through banks in New Jersey and Florida. The money orders and cashier's checks obtained in the investigation were in amounts less than $10,000, the threshold that requires reporting of cash transactions to the IRS.

Money was allegedly laundered through Miami offices of Florida National Bank, Bank Leumi le-Israel, and Chase Bank International, along with several banks in New Jersey that prosecutors did not name. None of those banks is believed to have conspired with the defendants. □

No Big Changes Expected at RTC After Kearney

By BARBARA A. REHM

WASHINGTON — Daniel P. Kearney's resignation from the Resolution Trust Corp. Oversight Board last week may have spurred a wave of criticism over how the thrift bailout is being handled, but it is not likely to prompt significant changes.

Congressional hearings questioning the need for an Oversight Board are not likely to materialize, and efforts to streamline the maze of agencies handling the bailout will probably also fail, according to observers on Capitol Hill.

ANALYSIS: *Follow-up on the news*

Rep. Bruce F. Vento, D-Minn., and Rep. Doug Barnard Jr., D-Ga., announced on Friday that they would invite Mr. Kearney, the board's former president and chief executive officer, to discuss what caused him to quit.

But Mr. Kearney has not yet taken advantage of opportunities to retaliate against Treasury Department officials who, he claims, kept him on a tight leash. In fact, Mr. Kearney took off for Mexico over the weekend without granting any interviews to reporters. People who know him say he does not plan to spill his guts at a congressional hearing – unless he is subpoenaed. Congressional staffers say the lawmakers are unlikely to go that far.

"We wanted to get Kearney's perspective," said an aide to Mr. Vento. "If he's not going to testify, I'm not sure what we'll do."

Treasury Stands Pat

As for Treasury, it appears undaunted and as convinced as ever that it has an obligation to keep close tabs on the Overisght Board's operation.

"The Oversight Board was put there to be the oversight to the RTC. That's what we expected it to be in the past, and that's what we expect it to be in future," said Treasury spokeswoman Desiree Tucker-Sorini.

Tensions should be smoothed a bit by the appointment of acting president and chief executive officer William Taylor, the Federal Reserve Board's director of bank supervision. He helped set up the Oversight Board after the bailout law was enacted last August.

"I was getting ready to go home [Friday]," Mr. Taylor said in an interview on Monday. "Instead I came up here and I've been here ever since." (See story on page 2.)

Mr. Taylor is a savvy career

Salomon Executive Urges End To Industry Barriers

By JAMES R. KRAUS

NEW YORK — In one of the most far-reaching calls to date for a revamping of the U.S. financial system, Salomon Brothers president Thomas W. Strauss on Monday called for the removal of all barriers separating commercial and investment banks. He said the removal would allow U.S. financial institutions to better compete in the world marketplace.

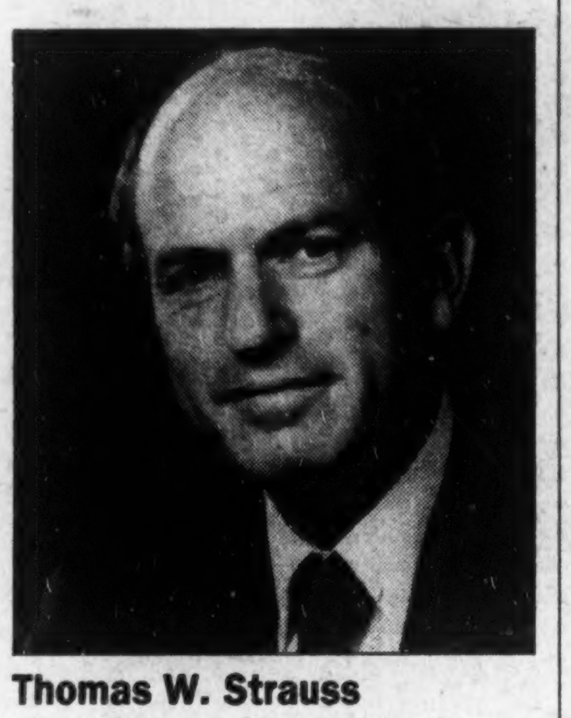
"This means repeal of Glass-Steagall, McFadden, and the Bank Holding Company Act," Mr. Strauss said in a luncheon address to the Institute of International Bankers.

"[These acts] have led to an inability to diversify risks."

The Glass-Steagall Act separates investment banking from commercial banking, the McFadden Act restricts branching across state lines, and the Bank Holding Company Act separates ownership of financial institutions from commercial institutions.

Beyond SIA Proposals

Mr. Strauss' call for a dismantling of all barriers separating banks and securities firms goes beyond proposals advanced by the Securities Industry Association in December. That group advocated a repeal of the Glass-Steagall Act for noninsured bank units in return for access to the Fed's discount window by securities firms.



Thomas W. Strauss
President, Salomon Brothers

Although the trade association has gradually eased its opposition to giving commercial banks securities powers, it has not gone so far as to call for a outright repeal of the Glass-Steagall Act.

An SIA spokesman declined to comment on Mr. Strauss' address. Salomon Brothers is a member of the association.

Mr. Strauss called for simple functional regulation, whereby

Comptroller Warns Banks To Clean Up Realty Loans

By ROBERT TRIGAUX

WASHINGTON — The Comptroller of the Currency has warned the banks it supervises to tighten up their real estate lending practices. Those that do not comply could face lending restrictions and higher capital requirements.

In an advisory letter sent late last week to nationally chartered banks, Comptroller Robert L. Clarke called for immediate attention to "fundamental deficiencies" and "negative trends in national bank lending." The Comptroller last issued a formal warning to national banks about real estate problems in December 1988.

Regulators said the letter reflects growing agency concern that some national banks are sacrificing good lending habits in the face of strong competition for real estate deals.

Agreements at Two Banks

In the troubled New England market, where real estate values have plummeted, the Comptrol-

1989 Results Show Rebound In Southwest

By STEVE KLINKERMAN

DALLAS — Improved fourth-quarter earnings capped a turnaround year for most big Southwest banks and set the region's banking industry solidly on the road to recovery.

The rejuvenation ended five years in which energy and real estate nosedives crunched the economy and bank earnings, causing most big Texas banks to fail. Though they won't soon be star performers, most Southwest survivors can expect further progress in 1990.

"The worst is over for Southwest banks," said Frank Anderson, a senior analyst with Stephens Inc., a brokerage in Little Rock, Ark.

Cleanups Take Hold

In Texas, two big banks that were products of late-1980s rescues reported solid profits last year and even some loan growth. A third big bank cleaned house in 1989 and is expected to report profits in 1990, but a fourth big bank stumbled badly.

Meanwhile, the two biggest

Maneuver by Arbitragers Sends Chase's Shares to a 52-Week Low

By JOHN EVANS

Like the stocks of most big banking companies, Chase Manhattan Corp. shares are tumbling these days. But in addition to bearish investors, Chase must contend with an unlikely foe – Wall Street arbitragers.

The arbitragers, analysts say, are selling Chase's shares short and have become a factor in the stock's sharp decline, to a 52-week low of 27⅞ late Monday afternoon. And to add insult to injury, they are covering their short positions by purchasing stock from Chase at a 5% discount to the market.

The arbitragers can do this because, if they own even a few shares of Chase stock, they are entitled to buy additional shares once a month at the 5% discount under a dividend reinvestment program introduced in the 1989 fourth quarter.

Chase Volume Soars

And arbitragers' selling has sent volume in Chase's shares soaring during the five trading days each month when the shares' average price is tabulated to establish the price at which Chase offers the discounted stock.

PEOPLE *in the news*

Taylor Plunges In as CEO Of RTC Oversight Board

By BARBARA A. REHM

Bill Taylor was getting ready to go home for the weekend last Friday when his phone rang. Instead of hopping in his Chevette and heading for the Virginia suburbs, the Federal Reserve Board's director of bank supervision grabbed a cab for the Resolution Trust Corp. Oversight Board's offices on Connecticut Avenue.

He was there all weekend.

William Taylor, 50, got the call to take over the thrift-bailout agency after its first president and chief executive, Daniel P. Kearney, abruptly resigned Friday.

Mr. Taylor was named acting president and CEO of the board, and it is not clear how long he will remain in the job. But he said in an interview Monday that "I'm going to run this as if it's not" temporary.

William Taylor

"I told them my basic plan is to put our heads down and go to work," he said, referring to the agency's 40-member staff.

It is clear that Mr. Taylor would like to avoid the controversy that enveloped Mr. Kearney's exit.

Mr. Kearney left after just four months because he felt Treasury officials were preventing him from doing his job with nitpicking interference.

Mr. Taylor is no stranger to the intricacies and politics of the administration's thrift cleanup. Last August, after the bailout law was enacted, he took a leave from the Fed to help set up the Oversight Board. And his name briefly surfaced as a possible successor to M. Danny Wall as director of the Office of Thrift Supervision.

Treasury Secretary Nicholas F. Brady is chairman of the RTC Oversight Board; Fed Chairman Alan Greenspan and Housing and Urban Development Secretary Jack Kemp are members. The board was established to set policy for and monitor the RTC.

The latter agency, which shares the Federal Deposit Insurance Corp.'s board, is selling or liquidating the nation's hundreds of insolvent thrifts.

Mr. Taylor is optimistic but realistic about his relationship with Treasury officials and the complicated cleanup structure's suitability for the job.

"I see this as a very straightforward thing," he said. "Brady is the chairman, and Kemp and Greenspan are members of the board, and I work for them." He called the organization "unique" but insisted: "I don't see any reason why it can't work."

Mr. Taylor's installation is likely to shore up confidence in the fledgling agency. He is viewed on Capitol Hill, in the agencies, and throughout the banking and thrift industries as a no-nonsense regulator who does not try to paper over a bad situation with polite talk.

Not counting a 1970s sabbatical in the private sector, Mr. Taylor has spent his life working for the Fed and is regarded as a man with unquestionable integrity.

RTC Chairman L. William Seidman said of Mr. Taylor yesterday: "We think he'll be doing his usual excellent job. He is a fine public servant, and we look forward to working with him." ☐

NEWS *briefs*

Utah Company to Acquire United Savings of Oregon

Stockholders of United Savings Bank, Salem, Ore., have approved a merger with First Security Corp., Salt Lake City.

M.J. Burford, United Savings Bank's president and chief executive officer, announced that the merger had been approved by more than 77% of the shareholders and would close on March 2.

Regulatory authorities have already approved the merger.

First Security has assets of $5.8 billion.

Moody's Downgrades Midlantic Debt Issues

NEW YORK — Moody's Investors Service said it has downgraded Midlantic Corp.'s ratings, as well as that of its subsidiaries, affecting about $700 million of debt.

Moody's said the downgrades were based on the continuing deterioration in asset quality for Midlantic's member banks, especially in the real estate loan portfolio.

— Reuters

2 Massachusetts Banks Plan 'Merger of Equals'

Andover Bancorp and First Essex Bancorp said they had signed a definitive agreement under which the companies will merge into a single holding company in a tax-free exchange of stock.

The combination is expected to create the seventh-largest savings institution in Massachusetts, they said.

The new company, to be named Andover-Essex Bancorp, will have assets of about $1.3 billion and 20 banking offices in Massachusetts and New Hampshire, they said.

The two companies said the transaction was structured as a "merger of equals."

— Reuters

Wells Goes Fishing in Boston Harbor

Top Developers Wooed as Region's Banks Pull Back

By SAM ZUCKERMAN

SAN FRANCISCO — With New England's big banks making few new loans on the region's depressed commercial real estate, Wells Fargo Bank may open a Boston loan production office.

As part of an aggressive effort to increase business with the area's top developers, the San Francisco-based bank has hired the Boston consulting firm Morris & Morse to study the feasibility of opening such an office.

Meanwhile, the bank in recent months began "calling on the best developers in that area," said vice chairman David M. Petrone, its top real estate official. It hopes to lure customers who traditionally have borrowed from such financially troubled institutions as Bank of New England and Bank of Boston, he said.

Wells Woos Builder on BNE Board

The Wells Fargo & Co. subsidiary is "talking on an intense basis" with The Flatley Co., one of the largest commercial developers in Massachusetts, about assuming mortgages on existing properties, said a source familiar with the talks.

Wells contacted Flatley more than six months ago, before big real estate losses at New England banks had been announced, the source said.

Flatley's main bank lender has been Bank of New England, and its president, Thomas J. Flatley, is on the bank's board of directors. A Flatley official refused to comment.

Although Wells' retail banking operations are concentrated in California, it is a national commercial real estate lender. Wells Fargo Realty Advisors, its principal real estate lending arm, has nine offices outside California, including in Chicago, Atlanta, and Washington.

Washington Office Now Covers Northeast

Customers in the Northeast, including New England, are served from Washington. About 30% of the bank's $4.6 billion in real estate construction loans were made outside California.

Most New England banks have virtually stopped new commercial real estate lending due either to losses on their existing portfolios or to pressure from bank regulators, according to bankers and developers in the region.

"It is very difficult to get any type of financing right now. Most Boston banks are pretty much are out of commission," said David A. Neskey, chief financial officer of Spaulding & Slye, a major Boston developer that has borrowed from Wells Fargo for five years.

Few institutions from outside the region appear to have moved in. "We have not seen any increased activity from non-Northeastern banks," said Gary D. Smith, vice president for commercial real estate at Fleet/Norstar Financial Group, Providence, R.I.

Wells Fargo is the exception, Mr. Neskey said. ☐

Bank ATMs to Be Allowed in Post Offices

By YVETTE D. KANTROW

NEW YORK — The U.S. Postal Service on Wednesday will formally invite banks to rent space in post office lobbies to install automated teller machines.

The announcement was originally scheduled next Sunday at an American Bankers Association meeting in Scottsdale, Ariz. But the Postal Service moved up the date when a report on the plan appeared in *Bank Letter*, a newsletter published by *Institutional Investor* in New York.

According to *Bank Letter*, the Postal Service is seeking contracts to place ATMs in 700 post offices. The contracts are expected to generate about $2 million in revenue by September, the newsletter said.

A spokesman for the Postal Service said Monday the service was still working on the final details of the request for proposals from banks.

The Postal Service has been piloting an ATM program for several months with BankAmerica Corp.'s Seattle-First National Bank. According to Richard P. Yanak, a longtime executive in the electronic banking industry, an ATM appeared in a Seattle post office in 1974.

"This is not a terribly new idea," said Mr. Yanak, who is now president of New England Network Inc., which operates the Yankee24 regional ATM network. "They're just getting around to spreading it around the country."

Mr. Yanak said he doubts that the program will result in a massive number of ATMs in post office. "The only way you can make any sense of installing an ATM is to have volume," he said. "And people just don't visit the post office as often as they do supermarkets," where ATMs are already common.

To turn a profit, an ATM located away from a bank branch must handle approximately 6,000 transactions a month, he said. Many urban areas already have enough ATMs installed in banks, supermarkets, and convenience stores. Therefore, banks may not want to spend additional money to rent space in post offices.

> **The Postal Service is seeking to place ATMs in 700 post offices.**

"Post office people will have no responsibility for these machines," Mr. Yanak added. ☐

COMMENT/*By Sanford Rose*

Revisiting Diversification

Whatever the ultimate cause of bank failure, it is clear that the proximate cause is deteriorating credit quality. Large banks fail when loan losses so erode earnings that uninsured creditors become frightened and refuse to roll over deposit and nondeposit funds. Small banks fail when rising loan losses cause regulators to declare them insolvent.

In turn, deteriorating credit quality always – yes, always – betokens inadequate diversification. Continental Illinois Bank (now Continental Bank) failed in 1984 because it made the mistake of lending to a group of middle-market borrowers whose business fortunes were too closely intertwined (energy companies). It thus ignored a basic principle of risk spreading.

The Texas banks obviously failed for much the same reasons. BankAmerica nearly failed in the mid-'80s because it lent too much to a group of borrowers – principally agricultural and real estate – who shared a common vulnerability to the threat of disinflation. And many Northeast banks are today imperiled because of overconcentrated real estate portfolios.

The risk in a portfolio of loan assets depends on three factors: (1) the risk of each individual loan asset; (2) the share of the portfolio devoted to each loan asset; and (3) the correlation among loan assets – that is, the extent to which borrower fortunes tend to move together or covary.

Bankers spend a great deal of time assessing individual loan risks through analysis of borrower balance sheets. But they usually devote scant attention to the other two components of risk.

Trouble Is Unexpected

Balance-sheet analysis will reveal the average or expected probability of loan default. But the true riskiness of a portfolio depends on the unexpected losses – the chances that, in any given year, losses will diverge substantially from their mean probability.

This magnitude is measured by the standard deviation – the square root of the variance of losses from their mean. And the standard deviation of loan losses – the likelihood of unpleasant yearly variations in loan-loss experience – is crucially affected by the extent of portfolio diversification.

The general principle is that as the number of its borrowers increases, a bank reduces overall risks by diminishing its exposure, as a percentage of the total portfolio, to any particular source of potential loss. Hence the variability of losses declines – that is, actual losses deviate less from their expected or mean value. And to the extent that losses become more predictable, it is increasingly possible to offset their impact by prior adjustments in loan pricing.

Changing the Mix

Just as the bank can lower its risk by reaching out to more borrowers, it can also do so by lending to a group of borrowers who are less interdependent and therefore less likely to default simultaneously.

A bank that not only enlarges the customer base but also changes the customer mix so as to lower, even very slightly, the correlation among borrowers – their mutual dependence on the state of the economy – can often achieve a quite dramatic decline in its standard deviation of loan losses.

Many bankers profess a knowledge of these principles of diversification. Yet few apparently act on this knowledge. For example, while it is admittedly quite difficult for banks to measure the degree of interdependence or correlation in their borrower populations, only a handful of banks make formal efforts to do so, relying instead on such comforting bromides as "we try to avoid undue loan concentrations" or "we lend to a great variety of customers in our service areas."

Such approaches to diversification are patently inadequate. There is no substitute for an attempt, however arduous, to measure the extent to which borrower business destinies are interrelated. And because the fortunes of borrowers in any given region of the country tend to be much more interdependent than those of borrowers selected from different regions, banks usually cannot achieve the requisite degree of diversification by concentration on only one service area.

Perverse Results

What's more, the fact that banks do no quantitative analysis means that their national loan purchase and sales activities, which are in part designed as a vehicle for improved diversification, may also fall short of achieving the desired objective. Lacking data, banks quite conceivably will sell off loans whose returns are minimally correlated with the other loans in their portfolios and buy loans whose returns are more closely correlated, thereby increasing rather than reducing their risks.

Some years ago, an attempt was made to improve bank diversification by organizing pools of commercial loans. The idea was to link the benefits of loan specialization with those of diversification.

Banks typically argue, with much justice, that their forte is specialization, by which they achieve economies of scale in credit evaluation. But banks can specialize without the need to retain overconcentrated loan portfolios.

Individual banks can originate loans only to companies in industries and in areas about which they have the greatest knowledge. Then they can put these disparate loans into central pools that mirror the national distribution of commercial credits. In turn, they can take back certificates of participation, or proportional shares, in these pools,

This type of pooling is probably the most efficient method of minimizing the degree of borrower interdependence in bank portfolios. It can thus greatly reduce the variability of loan losses.

CRIME BLOTTER/*By Tom Leander*

Thrift Agency Brings Charge in Colorado

The Office of Thrift Supervision has filed a complaint against Thomas Rapp of Greeley, Colo., and 11 members of his family for violations of the Change in Bank Control Act.

The OTS charges that the defendants violated the law in acquiring more than 40% of the common stock of First Northern Savings and Loan Association in Greeley in 1985, without giving 60 days' prior written notice.

The OTS complaint alleges that Mr. Rapp made misrepresentations about the extent of his and his family's stockholdings in the thrift when state and federal regulatory agencies inquired into the matter in 1986.

The OTS is seeking a permanent injunction that would require the defendants to sell their First Northern Savings stock.

Mr. Rapp could not be reached for comment. His lawyer, James Cage, a partner at the Denver law firm of Berryhill, Benjamin, Cage & North, said, "The Rapps have attempted throughout their dealings with the OTS and with [the OTS's] predecessor to cooperate fully." Mr. Cage said Mr. Rapps would file an answer to the complaint in federal court on Feb. 19.

The Change in Bank Control Act defines the control of a bank holding company as the power to vote 25% of any class of voting stock of an insured institution.

The complaint, based on evidence obtained by the OTS in cooperation with the Colorado state regulators, alleges that in July 1985, Mr. Rapp and members of his family acquired 53,500 shares of First Northern Savings voting stock.

That, combined with earlier acquisitions, brought the family's holdings to 89,500 shares, representing 45% of the company's total outstanding shares.

Fugitive in a Fraud To Return to U.S.

A 27-year-old Kansas City businessman, currently in jail in Hong Kong for carrying a false passport, will be returned to this country to face bank fraud charges, officials of the Federal Bureau of Investigation said.

David Riggs was charged by a federal grand jury last April with 29 counts of defrauding five Kansas City, Mo., banks by obtaining loans for fictitious purchases of audio and visual equipment.

Mr. Riggs allegedly carried out his scam by submitting false invoices to buy the equipment from a dummy company between 1985 and 1987. Neither the company nor the equipment actually existed. The FBI did not disclose how much money Mr. Riggs allegedly defrauded from the banks.

Mr. Riggs fled to the Cayman Islands in June 1987. He was arrested in Hong Kong in January 1989, for using a false Australian passport.

Cash to Be Returned In Crazy Eddie Case

Rejecting an argument that repatriation of assets from a foreign bank account will violate the Fifth Amendment right that protects against self-incrimination, a New York federal judge has ordered Eddie Antar, the owner of the defunct Crazy Eddie electronics chain, to return $52 million to the United States.

Mr. Antar, under investigation by the Securities and Exchange Commission for allegedly inflating the stock of his former company, last year transferred the $52 million to Bank Leumi in Israel. U.S. District Judge Nicolas Politan ordered the return of the money pending the outcome of the SEC investigation.

Mr. Antar's lawyer, Justin Feldman, argued that the repatriation of Mr. Antar's assets, which would involve disclosing to the government details of his Bank Leumi account, would violate his Fifth Amendment rights that protect citizens from being forced to testify against themselves. He said that the government has not presented proof that Mr. Antar was involved in fraud.

But Judge Politan rejected the argument, and said that the "bizarre" way Mr. Antar transferred his assets to Israel indictated he would be likely to "pick up and run, and the lord knows where," if he loses the case. The judge said Mr. Antar cleaned out his New York accounts by buying treasurer's checks in "bizarre amounts" such as $2,000,896.66.

Sovran Branch Is Hit 3 Times by One Man

An unidentified man robbed the same Sovran Bank branch in Washington three times in three weeks last month.

Detective Robert Flatley of the Washington police said that during each heist, the man, wearing a pair of sunglasses and a wool cap, walked into the Sovran branch on Martin Luther King Jr. Avenue, warned a teller that he had a gun, and demanded money. After each heist, he fled on foot. The bank would not disclose the amount of cash that the repeat offender glommed. Police are still looking for suspects, police said. □

CAPITAL

S&L Bailout Seen Hurting Branch Sales

By GORDON MATTHEWS

NEW YORK — Sales of branch offices, one of the few capital-raising avenues open to many thrift institutions, have been hurt by the thrift law, and even more pain could be on the way, observers say.

"The law created a glut of branch sellers, and few buyers because of the capital restraints on goodwill," said Linda Farrell, senior vice president of Kaplan Smith & Associates, a consulting company in Glendale, Calif., that is active in branch sales.

"Premiums at mediocre or low-quality branches are down," she said, but top premiums of up to 7% of deposits can still be fetched for large, well-located branches in growing areas.

"Not many desirable branches have been offered by federal regulators, and prices on the best offices are still what I would have expected six months or a year ago," she noted.

But that could change. Since yearend, regulators have seized some major institutions with large branch networks representing sizable slices in their markets. Sales of those branches, or even the waiting period before they are sold, could affect all other branch sales.

Bearers of Glad Tidings

While not a panacea, branch sales can bring a double helping of good news for thrifts trying to meet the stricter capital requirements under the thrift law, known formally as the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

With limited capital market access, many thrifts are shrinking themselves through sales of assets as part of their capital adequacy plans. And for many thrifts, branch networks are the biggest and best assets available.

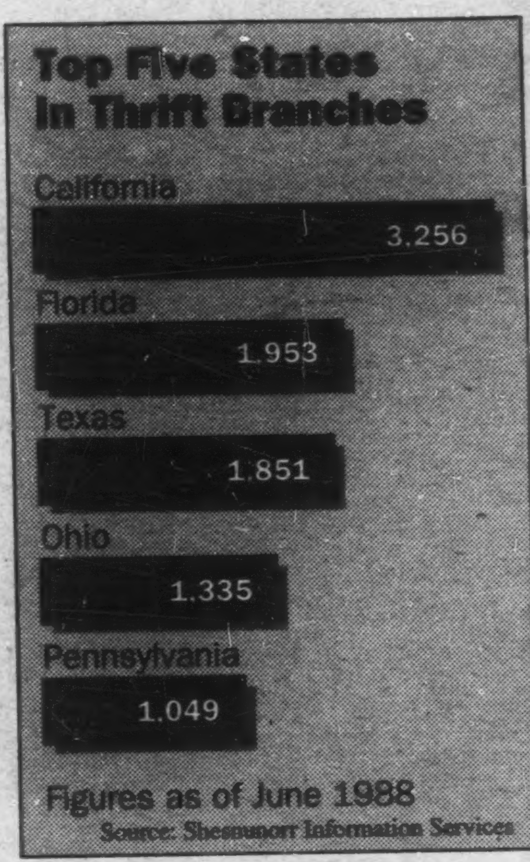
There are fears that all branch prices could be depressed by the sale of branches owned by such major institutions as Centrust Savings Bank, Miami; City Federal Savings Bank, Bedminster, N.J.; Empire of America Federal Savings Bank, Buffalo; and Atlantic Financial Federal, Bala-Cynwyd, Pa.

All have been seized by regulators since December and placed in the hands of the Resolution Trust Corp..

RTC Imposes Uncertainties

Centrust, Florida's largest thrift, was to have sold 2.4 billion of deposits in 63 branches to Great Western Bank, Los Angeles. But the RTC takeover has made that deal uncertain.

The largest thrift in New Jersey, City Federal, has a statewide, 77-branch network. It is one of the state's largest branch systems and includes many desirable locations. If potential bidders decide to wait for the sale of this franchise, other branch sales could be depressed.



Figures as of June 1988
Source: Sheshunoff Information Services

"Our experience is that we haven't yet seen a decline in thrift branch premiums, but everyone expects an impact from the City Federal situation," said Michael M. Horn, a former New Jersey state banking commissioner who is now executive vice president of Ryan, Beck & Co.

Empire of America has 125 branches in New York, California, Florida, Michigan, and Texas. Three of those states are among the top five in thrift branches.

Branch sales in the Northeast could be large in number, but the economic slowdown there is adding to troubles of banks as well as thrifts. Bank of New England Corp., Boston, has been trying to market some branches as part of a program to improve its capital position.

Premiums paid for branches vary widely. The normal range in most cases is a 4% to 6% premium on deposits being acquired, Mr. Horn said.

The largest branch deal so far has been the sale of $5.2 billion of deposits in 54 branches by Meritor Financial, Philadelphia, to Mellon Bank Corp., Pittsburgh. In that $3.55 million deal, Meritor received a healthy 6.5% premium for some of its best branches.

Rumblings from Drexel

The credit markets were roiled Monday with rumors that Drexel Burnham Lambert Group had lost its bank financing and may be filing for bankruptcy. At least one lender may have withdrawn bank lines used to back the Wall Street firm's commercial paper, sources said, and pulled other short-term funding.

"I assume that we have the normal banking lines regarding that paper," said Drexel spokesman Stephen Anreder, adding that he does not comment on rumors. In a prepared statement, Drexel announced its intent to find a "major investor or merger partner for the firm."

In December, shortly after Standard & Poor's Corp. lowered the credit rating on Drexel's commercial paper, the firm had about 2% of its total debt, or $500 million, of outstanding paper. The rest of its borrowings came from bank loans, repos, and long-term debt, Mr. Anreder said at the time.

DEALS

Bank Group Full for Holiday Unit

By LISABETH WEINER

Hard-fought efforts to arrange bank financing for Promus Companies Inc., a subsidiary newly spun off from Holiday Corp., were finally completed over the weekend when Citibank, Bankers Trust, and Credit Lyonnais said they would join Sumitomo Banking Ltd. in providing $1.01 billion to the company.

Commercial banking sources said the units of Citicorp and Bankers Trust New York Corp. started negotiating for a spot on the deal last week. Each of the banks will assume one-quarter of the deal – about $252 million – and each of the banks will carry the title of managing agent.

Sumitomo holds $400 million in letters of credit for the company that will be assumed by the new credit. Since December, Sumitomo had been billed as the lead on the deal. Although negotiations with other banks had been intense and dragged on for some time, no final deal could ever be structured.

Banking sources familiar with the deal believe that Promus asked Citibank and Bankers Trust to join the negotiations last week because time was running short. The company needs the money to pay a $30-a-share dividend on Feb. 22.

"I think, after a while Promus said, 'Listen, we need to have this money. Who is capable of doing it? Citibank and Bankers Trust are two players who can move quickly and have the strongest syndication capability,' " said one commercial banking source close to the transaction.

Sumitomo apparently ran into problems negotiating with other banks because it had promised the company a cheap transaction. For instance, Sumitomo had the deal priced early on at prime plus 75 basis points. Up-front fees were initially set at 1.5% to 1.75%. The deal now bears interest at prime plus 150 basis points or the London interbank offered rate plus 250 basis points. Although the company did not disclose the up-front fees, sources believe they are now in the neighborhood of 2.25% to 2.5%.

The apparent losers in the contest are Bank of New York and Bank of Nova Scotia, which were known to be in serious discussions with Sumitomo for a position in the deal since last December.

At any event, commercial bankers are confident this will be a very successful selldown.

"Given the emptiness of the market, this will go O.K.," said the banker.

The deal consists of a $400 million letter of credit that supports outstanding bonds, a $410 million seven-year reducing term loan, and a $200 million five-year revolving credit/term loan facility. Promus will pay an annual letter-of-credit fee of 2.5% for the existing $400 million letter of credit and an annual commitment fee of 0.5% on the unused portion of the term loan and revolving credit facilities.

Bankers Trust Organizes Mosler Recap Syndicate

Bankers Trust is looking to assemble a syndicate to aid in providing an $80 million loan for the recapitalization of Mosler Inc., a manufacturer of safes and security devices.

Commercial banking sources said the unit of Bankers Trust New York Corp. could easily have provided the entire loan itself. But given today's uncertain markets and the disdain toward debt, no bank is anxious to finance a transaction alone, especially when it's for a highly leveraged deal.

The $80 million term loan will be replaced by a $90 million permanent facility that will comprise an $80 million term loan and a $10 million revolving credit agreement.

Pricing on the deal is at the prime lending rate plus 150 basis points or the London interbank offered rate plus 250 basis points. The company will pay a commitment fee of 0.5% on the unused portion of the financing.

Along with the bank debt, the deal includes the assumption of $80 million of senior subordinated debt that was used in 1986 for the company's leveraged buyout, the issuance of $20 million of junior subordinated pay-in-kind notes, and $10.4 million for the assumption of an employee stock ownership plan.

In addition, $25 million of equity will be kicked into the deal; $14 million of this sum will come Kelso Investment Associates, one of the owners of the company; $8 million from management; and $3 million from an ESOP.

— Lisabeth Weiner

Adler & Shaykin LBO Fund Draws Bank Investments

Commercial banks are still putting money into leveraged buyout funds, even though the market for buyouts has hit a lull.

The latest buyout fund raised by Adler & Shaykin, the $178.35 million Adler & Shaykin Fund II LP, got investments from five banks, according to Leonard Shaykin, managing partner. Two of the banks, Manufacturers Hanover Trust Co. and First Fidelity Bank, have invested in previous funds. And the New York buyout firm added three new investors – Long Term Credit Bank of Japan and the banking units of Chemical Banking Corp. and Mellon Bank Corp.

Commercial banks invest in buyout funds partly for the returns, which have historically been over 30%, but more for the opportunity to participate as senior lenders in deals. Often banks that invest in a firm's fund get the right to a first look at deals from that firm.

Mellon put between $5 million and $10 million into five different funds, according to Jamie Stewart, an executive vice president, and is not looking for any more such investments.

"We picked five funds that we thought were compatible with the type of deals that we want to do," Mr. Stewart said.

Real Estate Woes Open Door for Other Lenders

By DAVID NEUSTADT

NEW YORK — Regulatory warnings about the dangers of real estate lending have clearly put a crimp in the market, but some institutions see that as a chance to gain business.

The latest caution came last week, when the Comptroller of the Currency told nationally chartered banks to tighten up on real estate loans. That came on the heels of highly publicized loan woes at a number of banks, particularly in New England.

ANALYSIS: *Follow-up on the news*

The warnings and losses have had a sobering effect on lenders, bankers said. "Right now, real estate lending in general as an activity is in disarray, especially construction lending," said Robert Mueller, an executive vice president at Bank of New York.

But while many banks have slowed lending or withdrawn from the market completely, some institutions are stepping in, albeit gingerly.

"We see very few players out there – it is a tremendous opportunity," said William Evans, a first vice president at Swiss Bank. "We will never completely replace U.S. banks, but we can make substantial inroads in this period."

Foreign Banks Hiring

Japanese, Canadian, and European banks are hiring some experienced real estate lenders, according to Edward Dellon, a managing partner at Dellon & Taras Partners, a New York executive search firm that specializes in real estate.

The new players are not rushing in to fill the void, however. Some Japanese banks, especially the trust banks, already have a great deal of Japanese real estate loans on their books. Indeed, three Japanese trust banks were recently downgraded because of their real estate exposure in their home country. That is expected to limit their willingness to take on similar loans here.

Japanese Less Aggressive

"Japanese banks have been more aggressive in the past but will be less aggressive this year," a Japanese banker said.

And the weak market will restrain everyone.

"There is a flight to quality," said Mr. Evans of Swiss Bank. "Only the better deals are getting done, and even those require higher pricing and tougher covenants."

"There are people looking for opportunities, but they are do-

Public Prefers Check Copies To Originals, Survey Finds

By KAREN GULLO

NEW YORK — Most consumers would prefer copies of checks produced by imaging systems to the original checks that are returned with monthly statements, an opinion survey by Trans Data Corp. found.

The survey, done in November and December, also found that many consumers would be willing to pay for the check-image option. And many people who prefer return of the original checks would accept images if they were less costly.

The study is one of the first to gauge consumer reaction to the emerging technology, in which electronically reproduced images substitute for canceled checks and similar documents.

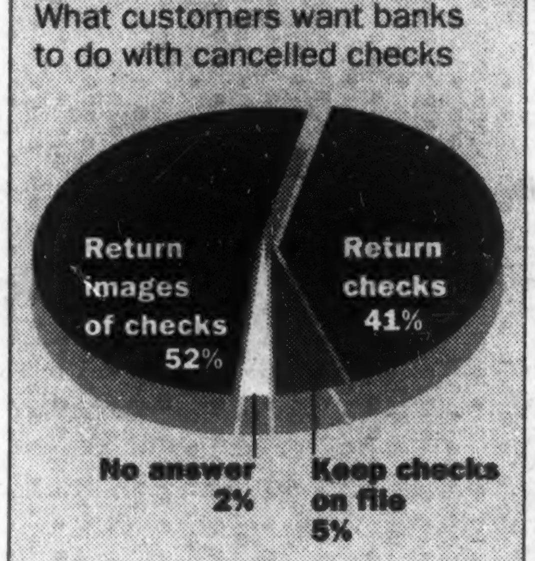
Path to Competitive Edge?

Most previous studies have established only that image processing can substantially reduce back-office costs. The Trans Data findings indicate financial institutions that move quickly into image processing could also gain a competitive edge in consumer marketing.

Trans Data, a research affiliate of the *American Banker*, found that 52% of consumers preferred to get copies of check images, while 41% preferred return of the actual checks.

The Allure of Images

What customers want banks to do with cancelled checks



Source: Trans Data Corp.

Only 5% preferred a safekeeping service, in which banks would hold onto the checks and send the customers a document listing check numbers and amounts. Expressing no preference were 1% of the respondents, and 1% said they didn't know.

Fee-Income Opportunity

The apparent preference for images suggests that these systems can "create new fee-income opportunity and carry significant market share implications" in addition to cost-saving benefits, said Steven Matzke, research associate at Trans Data in Wayne, Pa.

Bank Squeeze Forced Hand Of Faltering Drexel Parent

By LISABETH WEINER
and JED HOROWITZ

A refusal by commercial banks to lend money to the holding company of Drexel Burnham Lambert Inc. precipitated Drexel's decision to consider filing for bankruptcy protection, bankers said Tuesday.

They said that Drexel met with them late Monday evening, pleading for funds to pay off commercial paper that was coming due. But the bankers did not want to increase their exposure to the Drexel holding company, whose portfolio of stocks and bonds is less creditworthy than that of its broker-dealer.

"Why would we lend money to the holding company?" one money-center executive asked. "It has no cash-generating capability."

With the exception of Citibank – which has a $100 million exposure to Drexel Burnham Lambert Group, the holding company – banks lend primarily to the broker-dealer subsidiary. Their cumulative loans are

The Last Days of Danny Wall

By JIM McTAGUE

WASHINGTON — Danny Wall is going out with a whimper.

Vilified by fellow regulators, denounced by members of Congress, and taunted by the press for his handling of the savings and loan crisis, the nation's departing thrift regulator still refuses to strike back.

Finger-pointing goes against his style, a somber and reflective Mr. Wall said during a recent interview.

"I don't believe in bringing other people down," he said. "Part of it's my Midwest upbringing. And part of it is my religion."

"Dan is the G. Gordon Liddy of the thrift crisis," said one industry insider. "He's willing to hold his hand to the fire rather than say anything."

The Office of Thrift Supervision is in the midst of a high-profile investigation of the role played by Neil Bush, the President's son, as the director of a Denver thrift that failed.

But Mr. Wall insisted it is not motivated by revenge against the President for failing to defend him. "I haven't

Securities Industry Group Losing Its Chief Lobbyist

By BARBARA A. REHM

WASHINGTON — After 14 years with the Securities Industry Association, Don Crawford is moving on.

Mr. Crawford resigned as the group's top lobbyist here last week. SIA's official release explains that Mr. Crawford resigned his post as senior vice president and director of government relations "to avoid potential conflict while considering certain job offers in Washington."

In an interview Tuesday, Mr. Crawford said he did not think he had much of a future at the SIA. "I'm obviously not going to be president of this association any time soon," he said. "I don't even think that if Ed were to leave tomorrow they would offer me the job."

Edward I. O'Brien is president of the New York-based SIA. He could not be reached for comment.

In a major policy shift for the SIA, the trade group in December said it would no longer oppose the dismantling of the Glass-Steagall Act, which separates commercial and investment banking. Washington sources suggested the policy change had spurred the trade group to seek new leadership in its lobbying. "The powers that be, after pushing through their restructuring plan, simply wanted a change," said one Senate staffer.

Mr. Crawford said he had been considering for a year whether to leave the trade group to become a partner with a law firm here. "I'm turning 50, we have a new chairman, and the time had come," he said.

"I've had some preliminary conversations, but I really didn't want to engage much until I put these people on notice. Maybe I'm old fashioned," he said of his job search to date.

No successor has been named and Mr. Crawford plans to continue working for SIA for a couple months to "provide an orderly transition."

Mr. Crawford said it was unlikely that any of the three lobbyists working for him – Steve Small on taxation, John Paret on securities, and Jack O'Rourke on banking – would be promoted to take his place.

"The current thinking is that they will be looking outside the SIA," he said. "There is probably a desire to bring in a high-profile lobbyist."

The SIA does a large amount of its lobbying through several law firms here, including Royer, Mehle, and Babyak, and O'Connor & Hannan.

Mr. Crawford is well-regarded here. "I think he is a real good guy," said J. Denis O'Toole, a lobbyist with the U.S. League of Savings Institutions. "I guess things are changing in the SIA as they are in the rest of the financial markets."

Upon hearing the news, John Betar, a lobbyist with the Association of Bank Holding Companies, said: "That's bad because I think Don's a top notch guy."

Mr. Crawford, 49, joined SIA in 1976 as vice president of regulatory relations and moved up to director of the government relations division in 1979.

Before joining the SIA, Mr. Crawford was assistant general counsel from 1972 to 1976 for Shearson Hayden Stone Inc., a predecessor of the present Shearson Lehman Hutton. He had been a member of the Hayden Stone staff. He is a graduate of Villanova University and holds a law degree from the University of Maryland.

Strickland, SunTrust Banks CEO, Taps James Williams as Successor

Robert Strickland, chairman and chief executive of SunTrust Banks Inc., said Tuesday that he would recommend to the board that James. B. Williams be elected president and chief executive following the company's annual meeting in April.

Mr. Williams, 56, is currently vice chairman.

Mr. Strickland, who will be 63 in May, said the elevation of Mr. Williams to CEO was intended to insure "a smooth transition of responsibilities to our senior management." The company's bylaws require that Mr. Strickland retire in June, 1992.

As part of that transition, Mr. Strickland said he would recommend that SunTrust's president, Joel R. Wells, Jr., 61, be elected chairman.

Mr. Strickland, who will remain chairman of the executive committee, said he planned to continue "as an active member of the senior management group" until he retires.

Mr. Strickland, Mr. Wells, and Mr. Williams have held their current positions since the company was established in 1984 following the merger of Sun Banks Inc. and Trust Company of Georgia in 1984.

After graduating from Emory University with a bachelor's degree, Mr. Williams joined Trust Company of Georgia in 1957 as a member of the bank's management training program.

Mr. Wells, who holds a law degree from the University of Florida, was a lawyer in Orlando for several years. □

Western Banks Post Strong Gains

Heavy Loan Demand, Stable Interest Margins Cited

By SAM ZUCKERMAN

SAN FRANCISCO — Fueled by strong loan volume and stable interest margins, healthy profit gains were reported by leading banking companies in most of the West.

But analysts say a slowdown in the economy and rising commercial vacancy rates may signal an end to boom times this year.

Banking giants BankAmerica Corp., Wells Fargo & Co. and Security Pacific Corp. reported record profits in the fourth quarter, as did various small and medium-size institutions, including U.S. Bancorp, Portland, Ore., and Union Bank, San Francisco.

Trouble in Arizona

Indeed, the only major trouble spot was Arizona, where banks are still reeling from the collapse of the state's real estate market.

Interest margins stayed relatively stable for most western banks in the fourth quarter, compared with a big falloff the previous quarter. Analysts noted that many banks waited to lower their prime lending rate until after the new year, suggesting that a renewed margin squeeze is possible in the first quarter of 1990.

Although the expected crash in California real estate prices – a major Wall Street concern at the end of 1989 – failed to materialize, analysts cautioned that

Insurance Issue Spurs Rare FDIC Hearing

By BARBARA A. REHM

WASHINGTON — Under pressure from thrifts that stand to lose as much as $4 billion of deposits, the Federal Deposit Insurance Corp. took the unusual step Tuesday of scheduling a public hearing for March 14 on its plan to cap deposit insurance at $100,000 for all deferred compensation plans.

The thrift-bailout law put the FDIC in charge of both the bank and thrift insurance funds. Because each fund offered slightly different coverage, the FDIC in December proposed regulations to standardize the coverage.

One part of those regulations would scale back insurance that thrifts currently offer to employees of state and local governments and certain nonprofit, tax-exempt organizations that save for their retirement through deferred compensation plans.

Banks may insure these plans only up to $100,000, but thrifts may insure each participant in the plan up to $100,000. As a result, the banking industry has little of the $20 billion worth of deposits in deferred compensation plans, while the thrift industry has about 20% of the market, according to thrift industry estimates.

The FDIC says it is not sure of the size of the market for these plans, but it is responding to the outcry it has heard from thrifts that hold deposits from deferred compensation plans and from the state and local governments that sponsor them.

The hearing will be the agency's first since July 12, 1985, when it held one on a regulation to permit banks into real estate development and insurance underwriting. That plan was later withdrawn.

The thrift industry is hoping for a similar victory. The industry needs all the deposits it can get, and these plans – called "457 plans" after the section in the tax code that established deferred compensation plans – offer a stable source of funds.

"There is no doubt this is a growing business," said Gary G. Gilbert, director of banking agencies liaison at the U.S. League of Savings Institutions. "These days how many sources of real stable deposits can you rely on?"

In addition to scheduling the hearing, the FDIC on Tuesday postponed the deadline for commenting on the plan to March 23. □

Postal ATM Plan Defended

By YVETTE D. KANTROW

NEW YORK — A U.S. Postal Service official said Tuesday that, contrary to some bankers' assumptions, post offices attract enough customers to provide ample demand for automated teller machines.

The Postal Service this week is requesting proposals from financial institutions interested in installing ATMs in 700 post office lobbies.

"More than 6 million transactions are conducted every day nationwide in postal lobbies," Gordon Morison, an assistant postmaster general, said in a telephone interview. "Almost every household has a member that makes a visit to a postal lobby on a monthly basis."

Doubts on Volume

As news of the ATM plan spread this week through the electronic banking industry, some bankers said that post office ATMs may not be able to generate enough transaction volume to make the machines cost-effective.

But Mr. Morison said a Postal Service pilot program with BankAmerica Corp.'s Seattle-First National Bank – now in its sixth month – has demonstrated a demand for post office ATMs.

Seattle-Area Transactions

"Transactions have been growing, and we've had inquiries from other banks," he said. Transaction totals for the Seattle-area test have not been disclosed.

The Seafirst pilot program will be expanded this year to test the ATM dispensing of "plastic stamps." The stamps were designed specifically for ATMs, Mr. Morison said. They will have a self-adhesive backing and be printed in sheets of 12 that have the same dimensions as dollar bills. □

Survey Gives Check Imaging a Boost

Continued from *page* **1**

Few companies use images in customer statements because the technology is so new. Among those that do are First Interstate Bank of Washington, a unit of First Interstate Bancorp, and American Express Travel Related Services Co., which sends images of sales drafts with monthly account statements.

American Express positioned its service as a customer benefit by calling it "enhanced country-club billing."

1,024 Consumers Took Part

Since image technology is new to the public, Trans Data sent a sample statement with check images to 1,024 randomly selected consumers who had previously been screened and agreed to participate.

More than half the consumers who preferred copies of check images said they would pay more to get such bank statements. Most also specified they would pay $2 or more a month extra.

Of consumers who preferred to get original checks with their statements, 34% said they would be willing to accept copies of check images if it cost them less than regular statements.

The survey strongly indicated that banks not installing image-based check processing could lose customers to banks that do.

Many Potential Switchers

A "significant portion" of consumers in the study said they would switch to another bank if their bank did not offer copies of checks produced by imaging systems. Under an agreement with the study's sponsor, Trans Data could not divulge the actual proportion of potential switchers. □

U.S.-Built Trading System in Tokyo

By JEANNE IIDA

NEW YORK — Mitsubishi Bank has installed a trading-floor system in Tokyo designed by Sun Microsystems Inc. and Micrognosis Inc. that the companies say improves traders' ability to manage risk and identify trading opportunities.

In a major sale of high-powered financial-workstation technology developed in the United States, Mitsubishi bought more than 300 Sun workstations equipped with trading software from Micrognosis.

The development is similar to one announced last week by Bankers Trust New York Corp. and Digital Equipment Corp. While the 250-terminal Bankers Trust system in London can receive information in a digital format only, the system at Mitsubishi receives information in both the digital format and in the more common video format. Both the Bankers Trust and Mitsubishi systems have been online since December, and details are only now becoming public as competition among trading-floor vendors heats up.

Need to Manipulate Data

Many banks want systems that are capable of receiving digital information that is easily manipulated and analyzed on a workstation, said James L. Williams, vice president of marketing for Micrognosis. Video information can only be displayed.

But banks are reluctant to switch entirely to digital format, because only a handful of market-data feeds – such as Telerate and Reuters – are now available in digital form, Mr. Williams said.

"Micrognosis is providing an environment where customers can slowly migrate to a digital environment," said Jordan Graham, financial services marketing manager for Sun.

The workstations are multitasking, meaning that the computer can perform several functions at once, with some taking place off the screen. Traders can display information from several external data sources at once, and from programs running on computers within the bank. At the same time, the workstation can perform analytical calculations on data extracted from one of the sources.

The systems range in price from $15,000 to $40,000, Mr. Graham said. □

Mellon Launches Check-Issuing Service

By JEANNE IIDA

NEW YORK — Mellon Bank has introduced a payment service that takes over a company's check printing and mailing process and provides a link to a financial electronic data interchange.

It generates and mails all the check payments a company makes, regardless of which bank the check is drawn upon.

The service is aimed at companies that are trying to streamline paper-based accounts-payable systems, the company said.

Mellon's cash-management group is offering the product, called the Check Issuance Service. The service generates and mails all the check payments a company must make, regardless of which bank the check is drawn upon.

Companies frequently need to maintain numerous check-issuing locations or store various check stocks in a central location, according to Mellon. The new service simplifies that process and improves security, the bank said. The service can be used to handle regional payrolls, dividends, or general accounts payable.

Out of the Check-Writing Mode

"We view this as a major transitionary product," said James Stasik, senior vice president and group head of global cash management for Mellon Bank.

"This gets companies out of the check-writing mode," he said. "One step is to stop generating paper internally," as the check-issuance service does. "The next step is to stop generating paper externally," using the electronic data interchange, which automates the company-to-company exchange of trade documents and payment information.

Link to Remedi

Mellon can generate checks drawn on its own account or on another bank's account. If the checks are drawn on Mellon's account, however, customers can also access information about issued, paid, and stopped checks via Telecash, Mellon's information-reporting and transaction system.

The service can also be linked to Mellon's financial EDI service, called Remedi.

Mellon will transmit the check register in a format the customer wants, either electronically or on paper. □

HIGH FIBER

Financial institutions across the country are strengthening targeted areas of their operations with software from SSI. They're purchasing healthy, fat-free products for electronic funds transfer, check processing, securities recordkeeping, lease accounting, charged-off loan recovery, plus mortgage loan production, secondary marketing and servicing. They're gaining powerful, efficient solutions to their specific needs. To find out how SSI can help energize **your** operation, call or write us today!

COMMENT/ *By Michael E. Volpe and Ronald L. Koprowski*

Managers Must Set Example In Treatment of Employees

A branch employee gets an idea to increase the number of new accounts. He wants to photocopy some hokey, generic certificate that entitles the bearer to three months of free checking or share drafts if he or she opens a new account. Each teller would then give the certificates indiscriminately, while asking the customer to "tell a friend about us." You're the branch or district manager in charge: What do you do?

Most managers would thank the employee for the idea but suggest that the marketing department handle it. Some managers would deprecate the idea as "beneath our image." What actually happened? (This is a true incident.)

In the institution where this occurred – one of the largest banks in America – the employee was empowered to make this decision for himself. He photocopied 1,200 of these hokey certificates and gave them out. Result: 600 new accounts were opened. So much for "our image."

Key Is Management Attitude

What is the point to this? It is not that this was a good idea. In some other place, at some other time, this idea may have not worked at all.

But it does show that when employees have the confidence of their managers, they can and will relate to the customers with improved service and attention and thus higher productivity. The key is not the certificates but management's attitude toward workers.

Thomas Horton, in the *San Francisco Chronicle,* has reported the results of academic studies at major universities. They can be summarized very succinctly, thus: Staff members treat customers the same way management treats them as employees.

Don't Disregard the Obvious

This result should not surprise us (it sounds very similar to the Golden Rule, doesn't it?), but its obviousness is often disregarded by managers. If managers, however, learn to use this principle every day, they can dramatically increase the productivity of their staff.

A typical case involves a company committed to protecting the integrity of its credit procedures. As a result management had developed, and staff were commanded to follow, systematic procedures to eliminate the 5% of routine customer abuses.

Customers who requested a correction to their accounts needed to comply fully with the procedures. If they did not, delays would occur. Does this seem like a reasonable management practice? It is certainly responsible in terms of protecting the institution.

'Employees mirror the attitudes of their managers and the 'culture' in which they work.'

From the customers' perspective, this approach was a disaster. The problem was simple: 95% of the decent, honest customers were being treated as if they were part of the 5% of troublemakers.

The true harm of this policy was felt when the institution tried to change to a "user friendly" credit procedure. The employees were reluctant to adopt the new system because they still believed that management would punish them when credit problems were discovered.

Here was a case where management's initial success at stopping credit abuses led to later difficulties in correcting poor service problems. Management ultimately realized that over the long haul the restrictive procedures reduced employee productivity and profitability.

Employees Mirror Managers

Employees do in fact mirror the attitudes of their managers and the "culture" in which they work. They do not necessarily mirror their managers' policies. "Do as I say, not as I do" doesn't fly in the workplace.

Too often when we experience incidents of poor customer service, we fail to recognize that often the employee is mirroring the work habits of a larger organizational culture. Since poor service is the red flag of low productivity, every occurrence can be expensive to the company.

An outrageous but true example occurred several years ago when a shopper approached a new accounts person whose desk was buried in piles of unfinished work and inquired about some of the institution's accounts. The service representative responded, "I'm much too busy. Why don't you go across the street to the competitor and open the account over there, because they have a very competitive account."

Not an Isolated Example

It would be easy to dismiss this case as an isolated example – it is certainly an extreme one – but that would not be wise. The representative felt that he was being more helpful in sending the prospective customer away.

To the outside consultant this was one of many symptoms of a management culture that was insensitive to employee concerns. Management was, in effect, unconsciously training its staff to be counterproductive. If this employee had not felt considerable pressure to put a higher priority on the "work" on the desk rather than the new prospect, he might well have opened a new account.

As consultants, we see examples of this mirroring effect every day. One of our colleagues has an insurance client who lets customer claim forms pile up in cardboard boxes when the paper flow gets too intense.

Round File Method

They manage this pile in a very interesting way. They don't process the claims; they throw them out after six months. . . . After all, they rationalize, in six months most customers either

Trading Whiz Slows Down. Jay Pomrenze, a Bankers Trust *wunderkind* who manages its worldwide trading activities, is winding down his activities and may leave the bank by summer, sources say.

Mr. Pomrenze, who is an ordained rabbi, plans to take a leave of absence to spend time with his family in Israel, according to sources, and will not formally resign. He was promoted to head all trading in 1988 after Bankers Trust reported a record gain in the foreign currency unit he headed. Mr. Pomrenze, 39, joined Bankers Trust in 1973, fresh from graduate school at New York University.

"Jay is a frenetic human being," speculated a former colleague, "and he may just want to slow down."

At an analyst's presentation last year, global markets chief Eugene B. Shanks pointed to Mr. Pomrenze to illustrate that "quality, tenured staff" is Banker Trust's greatest strength in managing its trading risk.

Fury at the Fed. Staffers at the Federal Reserve Bank of New York say a furious E. Gerald Corrigan has imposed a temporary job freeze and a 10% cut in travel plans after reviewing their budgets for 1990.

Mr. Corrigan, the bank's president, summoned senior managers late on a Friday afternoon last month to announce the austerity plan after discovering they had exceeded his $275 million budget target by $3 million.

One source says Mr. Corrigan, a career Fed employee, is considering a run for public office and wants to show that he can tightly manage a 3,900-person business.

Nonsense, replies Fed spokesman Peter Bakstansky. "He's an apolitical guy who loves what he does and is proud of his sound internal management skills."

The spokesman confirms that Mr. Corrigan has imposed a three-month hiring freeze and travel cutbacks. That's because Federal Reserve banks try to live within strictures of the budget-trimming Gramm-Rudman law, though they are not technically subject to it, Mr. Bakstansky said.

No Ford in Its Future. About a dozen senior managers of American Residential Mortgage Corp., First Nationwide Bank's large mortgage-banking unit, are moving to buy the 44-branch company, say industry sources.

First Nationwide, the thrift unit of Ford Motor Co., bought American Residential just two years ago. It wants to shed it as part of a broad strategic refocusing, sources say.

American Residential, which originates about $3.5 billion of mortgages a year, was put on the block around September. An unidentified venture capital concern is working with senior managers, sources say.

John M. Robbins Jr., president of American Residential, declined to comment.

* * *

Civil Banking Wars. Last week's fracas about possible capital-rule infractions at the AMBAC mortgage insurance subsidiary of Citicorp was instigated by Sen. Steve Symms, R-Idaho, who sits on no banking committee. What piqued the senator's interest?

"The capital question was called to our attention by a constituent bank in Idaho," says Joseph Cobb, a Symms staffer. "It's a small bank," which fears that evasion of capital rules "could cause another S&L problem." He would not identify the institution.

A Manhattan public relations firm released correspondence between the senator and banking regulators that indicates Citicorp and other bank owners of insurers must beef up capital to maintain their units under new risk-based capital requirements.

Financial Guaranty Insurance Corp., an AMBAC competitor, first raised the issue last year but denies any tie to Mr. Symms. Until last year, J.P. Morgan & Co. controlled about 20% of FGIC but sold its stake to a unit of GE Capital Corp. A Morgan spokesman said the sale was unrelated to the risk-based capital rules. Citicorp officials insist they will keep AMBAC and remain in compliance with capital rules.

Coast-to-Coast Cuts. California Federal Bank, the nation's fourth-largest thrift, laid off about 120 data processing and administrative employees in the past two weeks, a spokesman for the California thrift says.

He flatly denied a market rumor that up to 600 people had been axed in a cost-cutting move.

On the East Coast, Marine Midland Banks' radical restructuring puts the kibosh on any money-center aspirations it once harbored. The New York institution, owned by Hongkong and Shanghai Banking Corp., is phasing out various corporate lending units – including its leveraged transaction units – and focusing on community and middle-market banking, a spokesman says. He would not reveal the number of employees being fired.

PC Usage Alters Customer Relationships with Trust Banks

By RICHARD LAYNE

NEW YORK — A boom in global investing is changing the way banks provide custody service to their big institutional clients. Customers armed with personal computers are demanding more information more often, and big banks are pouring millions of dollars into their computer systems to rev up a technologically sleepy business.

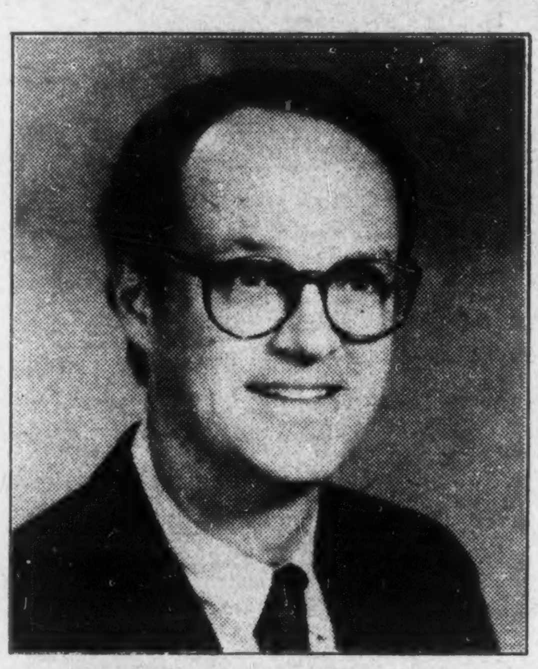
Northern Trust Co., one of the 10 biggest trust banks, is testing a new computer system in its London office. The system will be installed over the next six months. Chase Manhattan Bank, which leads U.S. banks with $90 billion in foreign-based assets under custody, is part way through a complete overhaul of its system.

Independent processors, such as SEI Corp., Wayne, Pa., which provides global custody service for more than 30 of the 100 largest banks, are also adding more reporting features to their software.

"We are changing our view of this business," said Marshall N. Carter, senior vice president at Chase. "This used to be mainframe transaction processing type of business. It is rapidly becoming an information business, providing investors with information on their portfolio." Chase, SEI, Bankers Trust Co. and others are encouraging their customers to use personal computers to tap into the trust systems.

Customers Focus on Data

Trust service providers will continue to perform the transactions that are at the core of the business, recording the sale or purchase of a security. But customers have come to focus on the information around that transaction, from reconciling dividends to managing cash positions. Banks are redoing or building custody systems that allow daily updates – rather than monthly reports that have been the norm – about the status of transactions and the cash position. That information can help a fund manager decide what holdings to buy or sell. Increasingly, those trading decisions involve foreign-issued securities.



Marshall N. Carter
Chase Manhattan

Before 1980, less than 1% of an institutional investor's portfolio was in foreign-issued securities. But a move toward diversification has increased that considerably, although domestic investment still accounts for more than 95% of both public and private fund portfolios, according to Northern Trust. In 1989, U.S. pension funds had $200 billion invested abroad. Bankers predict that figure will reach $500 billion by 1993. Some large funds have as much as 10% of their investments in foreign-issued securities.

Globalization and Growth

"Globalization on the part of our domestic clients is what has drawn us into the business and has provided a large part of our growth in the past couple of years in master trust and master custody," said Jeffrey F. Ruzicka, senior vice president at Northern Trust, which derives nearly half its operating income from fees for trust and other services. The Chicago-based company has $17 billion in foreign-issued assets under custody, almost 10% of its overall $220 billion in custody assets.

That increase in global custody business warranted an investment in the supporting computer systems, which have not provided the as much on-line information as domestic custody systems. "We have to offer a common level of service no matter where a client has its assets," said Jon E. Socolofsky, senior vice president at Northern Trust.

Project with Nynex Unit

Northern Trust's new system, which has been a two-year joint development project with BIS, a unit of Nynex that specializes in software for international business, is designed to let customers find out more information on the value of portfolios via a desktop personal computer. The new system allows an improved, daily reporting of foreign currency positions – critical for funds managers evaluating potential risk due to monetary fluctuations.

Customers with personal computers are demanding more information more often.

Last March, Chase Manhattan started to allow its mutual fund and pension fund customers to use personal computers to check the status of their portfolios daily. More than half of their customers can now use a personal computer to look at their asset holdings, dividends, and failed trades on a daily basis. The bank also upgraded its multicurrency accounting process, enabling customers to get daily reports rather than wait for a monthly review.

Chase plans to make other aspects of global custody processing available electronically to its customers, including tax reclamation and notices of corporate actions. "This type of service is a logical progression," said Peter Derrenbacher, vice president at Chase. "If you call up the phone company, they hit a button and get your history on line."

Last year, SEI offered customers access to its Invest 3000 system via personal computer. James R. Spencer, senior vice president of the Wayne, Pa.-based company, said that he is currently working on making the trust information available through a user-friendly overlay called Windows, a software program with graphic capabilities sold by Microsoft Inc. ☐

STRATEGIES

Private-Banking Clients Attracted By Access to PCs

The demand for readily available information on investment porfolios is not limited to institutions and fund managers. As part of private-banking services, some banks are letting customers monitor their investment portfolios the way big pension funds do.

Northern Trust Corp. is one of the custody service providers that let select private banking customers access trust accounting systems via personal computer. Smaller trust operations, such as Marine Midland Banks, also offer this service to high-net-worth individuals. Units of CoreStates Financial Corp. plan to offer a similar service.

As providers of custody services, these banks safekeep securities and perform the necessary record keeping, cash management, tax reclamation, and corporate actions. Banks may also as a trust managers for private-banking individuals, investing and managing their assets. Typically, institutional investors use outside money managers for investment advice and depend on banks to do the record keeping regarding the sale and purchase of assets.

Marine Midland which uses Wayne, Pa.-based SEI Corp. to provide custody processing, began offering institutional and private-banking clients access from personal computers 18 months ago.

Several high-net-worth individuals – along with 20 institutional investors and other funds – now check their portfolios, under bank custody, via personal computers, according to SEI.

CoreStates, another SEI client, plans a similar service for high-net-worth individuals, although CoreStates bankers said there is no set date for the introduction. CoreStates said that adding such a service is technologically easy, but it must be bundled with other banking services.

Northern Trust has a slightly more exclusive approach. The bank offers this service only to individuals whose assets and use of money managers are akin to an endowment or a pension fund, said Jon E. Socolofsky, senior vice president at the Chicago-based bank company.

"They want a package of services that looks like a pension plan or an endowment," Mr. Socolofsky said. Typically, those individuals may use several money managers to invest their assets.

For those high-net-worth individuals, the electronic delivery of information is part of a package of services offered by the bank. "That is not the normal service to provide or be asked for by the majority of our personal banking clients," Mr. Socolofsky said.

ISSUES

Big Network Management Purchases Set

By KAREN GULLO

NEW YORK — Financial institutions are planning major purchases this year of computer systems that manage communications networks.

These network management systems are key to banks and other companies whose very survival depends on the reliability of both voice and data communications. An hour of network downtime could cost a bank hundreds of thousands of dollars.

Senior information-systems managers at banks, financial institutions, and other corporations ranked network management as the No. 1 emerging computer technology in a recent survey by the Index Group, a Boston consulting firm.

50% Spending Rise Planned

Banks plan to increase spending for network management products by an average of nearly 50%, according to a separate survey by Business Research Group, Newton, Mass.

And banks are paying their network management executives more, too. The average salary of a network manager in the financial services industry rose 7.2% in 1989, to $56,954, from $52,322 in 1988, according to a survey by *Network World*, a trade publication.

Popular Vendors

Networks bankers would consider buying

IBM	62%[1]
AT&T	32
DEC	28
Cincom Netmaster	15
MCI	13
Hewlett Packard	4
Sprint	4
Other	6

Source: Business Research Group, Newton, Mass.

[1] Percentages total more than 100 because some bankers are considering more than one system.

Banks are particularly interested in acquiring products that consolidate management of various network levels under a single umbrella. Integrated network management systems simplify the monitoring of network behavior and performance by automating many reporting functions now done manually.

Nynex System Installed

Just last week, National Westminster Bank USA installed an integrated network system from Nynex Corp. in its Melville, N.Y., network control center. The system will simplify management by consolidating information from 10 systems. A key component is artificial intelligence software that alerts bank managers to network problems.

Network management systems carry a high price tag, so bankers, most of whom are buying these systems for the first time, are cautious.

"Everyone is doing a lot of looking," said Patricia A. Farwid, vice president of the information processing group at Mellon Bank, the Mellon Corp. subsidiary. "The prices range from a quarter of a million to $800,000."

Mellon Considers AT&T

Ms. Farwig said Mellon has evaluated a network management system from American Telephone & Telegraph Co. "It has the best design in terms of future direction but still has a hefty price tag," she said. "And the product is not complete, so you'd be buying into what's to come." The system costs $300,000 or more, depending on the configuration.

The AT&T system is among bankers' leading choices, according to the Business Research Group survey. Of the 47% of surveyed banks that said they planned to install an integrated network management system, 32% said they were considering AT&T (see chart).

But 62% of the banks are considering the NetView system from IBM Corp. ☐

With Drexel Hurt, Risk May Rise for S&Ls

By BILL ATKINSON

WASHINGTON — Stunned by news of the financial problems at Drexel Burnham Lambert Group, financial analysts warned that large junk bond holders in the thrift industry could take a financial beating at the end of this quarter when they report the value of their holdings.

Nearly 200 thrifts held junk bonds worth about $13 billion in their investment portfolios as of Sept. 30, said thrift regulators. And the Resolution Trust Corp., the government's conservator of seized thrifts, recently has seen its junk bond holdings swell to $2.6 billion. Analysts say RTC holdings include some of the weakest portfolios in the junk bond industry.

Drexel Needs Billions

Drexel, the Wall Street firm that embraced the market for high-risk, high-yield bonds, said it would need hundreds of millions of dollars in financing to pay off short-term borrowings. The announcement could hurt S&Ls, which under the 1989 thrift-bailout law are required to dispose of all junk bonds by 1994 or put them into a separate subsidiary.

S&Ls recently began marking-to-market their junk bond portfolios, and if the current declines persist in values registered by junk bonds, S&Ls could suffer losses, said Bert Ely, a thrift consultant.

"If that market doesn't come back by the end of March, we are going to see some institutions taking some hits on this," Mr. Ely said.

Additional Market Pressure

"If Drexel is experiencing problems in its role of making a secondary market in junk bonds, it could put additional pressure on junk bond markets," said Steven Roberts, a principal with Peat Marwick Main & Co. If the problems are corrected in a short period of time, there may be no lasting effect, he suggested.

"There are going to be some hurts out there," Mr. Ely said. "One of the problems right now is that the market has lost a lot of its liquidity. It is going to be a while before the market loosens up and starts to return to a normal condition."

One thrift in particular that Mr. Ely is concerned with is Beverly Hills, Calif.-based Columbia Savings and Loan, which at the end of September had 35.4% of its assets tied up in a $4.1 billion junk bond portfolio, according to Sheshunoff & Co. of Austin, Tex. Columbia officials could not be reached for comment before press time.

Besides Columbia, other large junk bond holders include California's Imperial Savings and Loan of San Diego, with a $1.3 billion portfolio; American Savings Bank of Stockton, with a $493 million portfolio; and Miami-based Centrust Bank, with $714 million portfolio.

Centrust recently failed and could pose a problem for the RTC. According to Kenneth H. Thomas, a Miami bank and thrift consultant who follows the junk bond market, 90% of Centrust's portfolio is made up of Drexel junk bonds. He said they are particularly risky because "most of Drexel's junk bonds did not syndicate out to other houses."

"I'm not at all optimistic for the short- or long-term prospects of the junk bond market. Everything that has happened to date has happened when the economy has remained fairly strong," he said."

Mr. Thomas said the RTC has a $2.6 billion junk bond portfolio and missed an opportunity between last March and June to sell much of it. "I have some serious questions of what the overall strategy of the RTC is."

Henry Peltz, an analyst with Keefe, Bruyette & Woods, said some institutions are already bailing out of the junk bond market. Northeast Savings' portfolio dropped to $25.7 million at the end of 1989, compared to $379.6 million at the end of 1988, Mr. Peltz said.

Mr. Peltz called Drexel's announcement "sinister," saying that confidence in junk bonds may continue to erode and corporations may have more problems attaining capital to pay off debts.

There is some hope for a recovery, however, Mr. Ely said. "We have a serious emergency situation, but it will bounce back some."

Mr. Ely expects that S&Ls will hold on to their junk bonds until the market corrects itself. "People are not going to be dumping this stuff in a panic," he said. ☐

Through the eye of the fiduciary.

When it comes to trust investments, it's Federated's only line of sight.

Your ability to execute your fiduciary responsibility in an ever-changing financial marketplace and complex regulatory climate requires a special vision—and an investment approach aligned with that vision.

That's how *we* see it.

Many mutual fund companies offer trust departments the same generic funds that they distribute to the general public. Not Federated. Our *MultiTrust*® Systems of investment products and services are designed to meet the focused investment needs of the fiduciary...so you can allocate assets efficiently, and concentrate on new business development.

Spanning market sectors and maturity ranges, MultiTrust portfolios are managed by teams of experts who apply structured, highly disciplined methodologies to every decision.

We back these investments with value-added services that can make the critical difference in your success.

We'll keep you up to date on regulatory issues.

Provide practical marketing support.

Connect you to user-friendly technology for up-to-the-minute trading, information, and recordkeeping.

And, for the highest level of personal attention, we'll service your account with a regional team of dedicated specialists.

To learn more about how Federated investment products line up with your department's vision, call a Federated representative toll-free 1-800-245-5040.

Through the eye of the fiduciary. It's our only perspective.

Imaging May Do Double Duty If Appeal Is Real

By KAREN GULLO

ANALYSIS: Follow-up on the news

NEW YORK — As bankers investigate – and in a few cases begin installing – image-processing systems to cut operating costs, it is becoming apparent that this technological advance is no longer an issue only for technologists.

Most attention to date has been on reducing or eliminating paper documents in banks' back-office operations. But research is beginning to show that image processing has widespread marketing appeal that can have an impact on the entire industry, and not just on the big banks that have already found uses for the technology in operations hidden from public view.

"Every bank is going to have to look at justifying the technology in areas other than cost cutting," said Charles McDonough, a partner with Andersen Consulting, Detroit.

One intriguing possibility is that consumers would be drawn to a service in which canceled checks, normally returned with monthly bank statements, would be replaced by miniaturized copies that are easier to handle and file.

More than half of consumers responding to a survey late last year by Trans Data Corp. said they would prefer images to canceled checks, and many said they would switch banks to get such a service.

In another survey by Trans Data, an affiliate of the *American Banker*, 30% of responding bankers said they are interested in implementing imaging systems for check processing, remittance/lockbox, and mortgage loan applications within the next five years. One of the long-term benefits of the technology, the bankers said, will be in the area of printing statements from stored images.

Cost-Saving Benefit

But the short-term business case for image technology at most banks is weighted heavily on the side of reduced administrative costs – and for good reason.

"We're implementing it just on the business case that it will save us $65 million in operating costs, without even looking at the marketing aspects," said Jack A. Brown, first vice president at Security Pacific Automation Co. "But in the long term, we will have to leverage the technology everywhere we can."

Gonzalez Says $100,000 Ceiling Favors Affluent

By ROBERT M. GARSSON

WASHINGTON — Henry B. Gonzalez, chairman of the House Banking Committee, jumped into the deposit insurance debate Wednesday, charging that the present $100,000 coverage amounts to "government guarantees for the most affluent in the society." He has scheduled hearings on deposit insurance to start Feb. 21.

Taking direct aim at an issue that strikes an emotional chord among bankers, especially those from community institutions, the populist Texas Democrat said banks and their customers have no "divine right" to coverage of $100,000 per account.

Community banks, however,

First Interstate Sells 40% of Issue to KKR

By SAM ZUCKERMAN

SAN FRANCISCO — In a move that could make it a takeover target, First Interstate Bancorp announced Wednesday that a partnership affiliated with the leveraged buyout firm Kohlberg Kravis Roberts & Co. has bought about 40% of the troubled company's 8.6 million-share public stock offering.

The KKR group's agreement to buy 3.5 million shares for $115 million gave First Interstate the boost it needed to successfully complete the stock offering, which allowed the company to raise $276 million. The company plans to use most of the money to shore up its troubled Texas unit.

However, an adviser to First Interstate acknowledged that the massive investment by a group connected to one of the country's most renowned acquisition specialists could put the company into play.

"That's a risk," said the adviser, who asked not to be identified.

With stocks of banks across the country down as much 25% to 30% in the past four months, some observers say that the banking industry may now experience a surge of takeover speculation.

"For speculators and arbitragers, the pieces may be worth more than the whole," said Michael J. Conover, a Los Angeles investment banker. "They might feel comfortable that they could make some money."

Former Treasury Secretary William E. Simon and his merchant banking partners, for example, stand to more than double a $60 million investment in First Interstate Bank of Hawaii made one year ago if a planned sale of the bank to First Hawaiian Bancorp goes through.

'For Investment Purposes Only'

A First Interstate spokesman denied the Los Angeles-based company is a takeover target. And KKR, which has reaped millions of dollars in profits by orchestrating corporate restructurings, indicated its purchase

The Aftermath of Drexel's Collapse

Regulators Not Likely to Treat A Big Bank Failure Same Way

By ROBERT M. GARSSON

WASHINGTON — Despite the spectacular collapse of Wall Street giant Drexel Burnham Lambert Group Inc., the doctrine that some commercial banks are too big to fail appears to have survived intact.

Regulators, representatives from the financial services industry, and congressional aides all seem to agree that the differences between broker-dealers and insured commercial banks are too great for the Drexel bankruptcy to affect the future handling of big bank failures.

"I just don't see that there's much relationship between the failure of a firm like Drexel and that of a big bank," said Lyle Gramley, a former member of the Federal Reserve Board and now chief economist for the Mortgage Bankers Association.

Federal Deposit Insurance Corp. Chairman L. William Seidman reiterated Wednesday that the too-big-to-fail doctrine was a fact of life,

12 Banks Still Lending to Broker After Parent's Bankruptcy Filing

By JED HOROWITZ

NEW YORK — Although Drexel Burnham Lambert Group Inc. filed for bankruptcy Tuesday, about a dozen banks continue to provide several hundred million dollars in overnight loans to the company's broker-dealer subsidiary as it seeks an orderly liquidation, bankers said Wednesday.

Funding is continuing "at approximately the same levels" at which Drexel borrowed last week, the head of broker lending at a New York money-center bank said. Neither he nor Drexel would put a number to the borrowing, but the firm is known to have sought at least $250 million Monday to replace commercial paper and other lost sources of funding.

The banker said regulators have not pressured banks to continue lending.

Despite fears that the broker-dealer could plunge into insolvency as rapidly as its parent, the banks have strategic and business interests

Citibank Hires GE Executive Known for Urban School Aid

By FRANKLIN SMITH

Paul M. Ostergard is not an educator by training, but his experience organizing educational programs for inner-city students brought him to the attention of the nation's largest bank. This week, Mr. Ostergard becomes vice president of corporate contributions for Citibank, where he will supervise $22 million in annual donations for education, human services, and the arts.

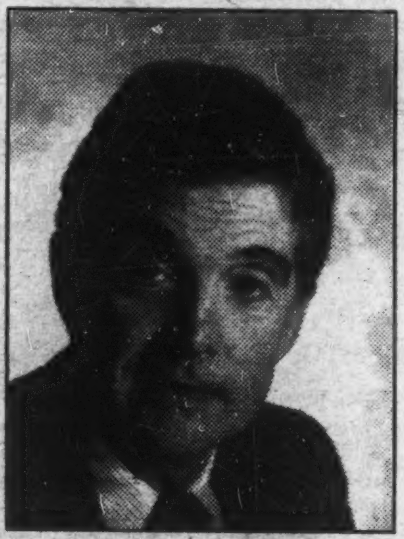
Mr. Ostergard, 50, spent 16 years with General Electric Co., Fairfield, Conn., most recently as head of its contributions program and president of the GE Foundation. There he pioneered the notion of business partnerships with poorly funded or inner-city schools to prepare students for college.

He said that at New York-based Citibank he expects to continue seeking ways to improve access to higher education.

"There is a need to put more emphasis on looking at every youngster in our school systems to see if they are capable of doing work beyond the high school level," Mr. Ostergard said. "We need to make sure the students are adequately prepared for the college or university level."

Citibank and its parent, Citicorp, recently committed almost $11 million in grants to help improve student achievement at needy public schools.

"I was reponsible for overseeing contributions to some 35 inner-city schools across the country in a major effort by GE to help turn these schools around," Mr. Ostergard said. "GE volunteers, mentors, and tutors all worked together to help build the students' self-esteem."



Paul M. Ostergard

As concern grows about the quality of the work force, education has become a major beneficiary of corporate giving. Nationally, corporate aid to education was $2.1 billion in 1988, or 44% of all charitable contributions by corporations, according to the *Chronicle of Philanthropy*, based in Washington. Of that aid, 65% went to colleges and universities, 9% to precollege institutions, and 22% to other programs.

"There are new ways to approach the inner-city school problems showing concern about the students' welfare and education," Mr. Ostergard said. "We can encourage human services organizations to bring programs to the schools to help in the educational process, along with helping prepare the students for colleges and the work force."

A 1961 graduate of Case Western Reserve University, Mr. Ostergard received a law degree from the University of Michigan and a master in public administration from Harvard University. Before joining GE, he was counsel to the Pennsylvania Co. and Trans World Air Lines, and served in the Air Force in Vietnam.

"I felt I had made my contribution to GE and wanted to make a change," Mr. Ostergard said. "Citibank interested me because of its new emphasis on education, and I want to sharpen its corporate contributions and advance its commitment to this area."

Mr. Ostergard reports to Sandra Meyer, senior officer for corporate affairs. □

Midwest Bank Earnings Edge Up

Most Institutions Do Well, but Writeoffs Cut Gains

By NANINE ALEXANDER

CHICAGO — Midwest banks posted modest profits in the fourth quarter as many institutions opted to clean up their balance sheets with writedowns and increases in provisions for sour loans.

"With a few exceptions, the performance of midwestern banks is generally still good," said Steven R. Schroll, managing director of research at Piper, Jaffray & Hopwood Inc. "But the economy has softened and the Midwest is not immune."

Earnings gains on average were in the 3% to 4% range, in line with analysts' expectations. However, some analysts said they were surprised - and concerned - by the scope of the writedowns and the loan provisions taken.

Eye on Problem Loans

"Any increase in problem loans is something that must be watched at this stage in the business cycle," said Harriet Hancock, an analyst at Chicago Corp.

Despite their concerns, analysts said the fourth quarter was an opportune time to take writedowns and increase provisions. "In a slowdown, asset quality suffers, so it makes sense to build reserves before that," Kenneth F. Puglisi, senior vice president for research at Keefe, Bruyette & Woods Inc.

Mellon Bank Corp. and PNC Financial Corp. reported huge declines related to big loan-loss provisions for Third World loans. Mellon's profit dropped 87.5% to $6 million because of a $100 million provision.

PNC Profits Plunge

PNC Financial's earnings plunged 98.7% to $1.5 million after it took a $180 million provision. Both institutions are based in Pittsburgh.

At Michigan National Corp., profits rose 3.4% to $24.2 million despite a $24 million addition to its loan-loss reserve. Mr. Puglisi said the provision was about three times greater than he had expected.

Vernon L. Patterson, a vice president at Farmington Hills-based Michigan National, said the company took the move because it wanted to do "everything we could to strengthen the balance sheet."

First Bank Still Weak

First Bank System Inc. continued to be the region's most troubled bank. The Minneapolis-based bank company reported a $107 million loss after increasing its provisions for credit losses to $175 million, compared with $23.9 million a year earlier. Total provisions for the year were $253.5 million, up from $76.0 million in 1988.

First Chicago Corp. increased its loan-loss provisions 50% to $75 million, a move that contributed to a 10% drop in earnings to $122.9 million, or $1.77 a share. The company's nonperforming assets increased to $1.1 billion, or 3.8% of the company's total loan portfolio, from $876 million, or 3.1% of its portfolio, at the end of 1988.

Continental Bank Corp., which reported a $58 million

Corrections

Citibank has provided further details of its relationship to Prospect Street Investment Management Co., as described in a Feb. 9 article, "2 Bank Funds Bravely Target Leveraged Loans" (page 1). Citibank says it acted as investment banker, placement agent, and helped structure Prospect Street Senior Portfolio LP, but put no equity into the deal.

The fund is capitalized with 80% senior debt and 20% subordinated debt and equity. Citibank says the rating agencies base their evaluation of the paper on the rating of the company that issues the surety bond, not on the degree of overcollateralization.

■

A Feb. 12 article ("Big Bank Profits Hurt by Provisions," page 12) incorrectly identified the top banking industry earner for 1989. It was BankAmericaCorp., with net income of $820 million.

BFS Bancorp Sues Suitor, Alleging Legal Violations

NEW YORK — BFS Bancorp said it filed suit against First Capital Group Inc. in U.S. District Court in Delaware, alleging violations of federal securities and banking laws and proxy solicitation rules.

Actions disclosed by First Capital in an amended 13D filing with the Securities and Exchange Commission prompted the lawsuit, said Bristol, Conn.-based BFS. The Office of Thrift Supervision is also reviewing the matter, according to the company.

Last month, BFS rejected a $16-a-share acquisition offer from First Capital.

2 Japanese Banks' Issues Given New Ratings by S&P

NEW YORK — Standard & Poor's Corp. said it downgraded Mitsui Bank Ltd.'s senior debt and long-term letter-of-credit-supported issues to A-plus from AA-minus.

The rating agency affirmed the A1-plus rating of the bank's commercial paper, certificates of deposit, and short-term letter-of-credit-backed issues, as well as the same rating on Mitsui Bank Canada's certificates of deposit and the global commercial paper program of Mitsui Finance International.

The rating on Taiyo Kobe Bank's commercial paper, certificates of deposit, and letter-of-credit-backed issues was raised to A1-plus from A1.

Bank of New England Sale

BOSTON — Bank of New England Corp. said it completed the sale for $100 million of the Canadian portion of its McCullagh Leasing unit to General Electric Co. □

Imaging Could Bring Big Payoff

Continued from *page* **1**

That means using it to generate fees for the bank by charging for image statements and other image-based services. The Trans Data consumer survey showed that not only would customers prefer to receive copies of checks produced by imaging systems rather than the original documents, but many are willing to pay for the option.

Appeal Must Be There

This presents tremendous fee-generating opportunities for banks, but bank marketers must first be convinced that image-enhanced services truly have mass appeal.

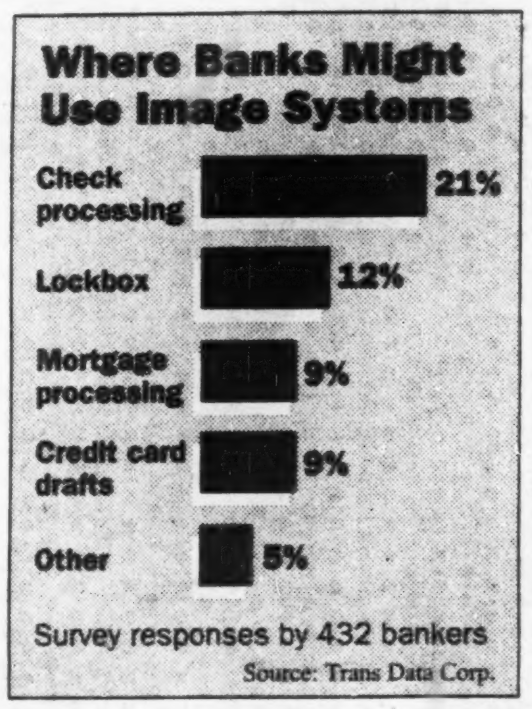
"Usually, you have the marketing people asking the operations people to develop systems to help them do something," said Steven Matzke, research associate with Trans Data in Wayne, Pa. "In this case, the operations people have had the technology for two years and haven't told the marketing people it exists."

Most of the emphasis to date has been on document processing and filing. In one common application, loan documents are converted into electronic images and stored in computer files, allowing banks to eliminate paper and streamline data communications.

Images are also useful in transmitting documents across long distances. MasterCard International has instituted a system allowing banks to obtain images of original credit card drafts within a few days. It typically takes 20 days to retrieve and send actual copies through the mail.

The shorter-term focus on cost-cutting opportunities has been a natural outgrowth of the wave of mergers, consolidations, and other profit-enhancing strategies.

"Companies are in general struggling to cost-justify their information systems," said Jane Stanhope, senior analyst at Cap International, a Norwell, Mass., subsidiary of Nynex Corp. "You can quantify cost savings in operations easier than you can quantify the benefits of increased customer services."



Survey responses by 432 bankers

Source: Trans Data Corp.

Equipment Is Costly

Image processing equipment is expensive, and many large banks that are implementing the technology want to justify the expense first and look at the marketing applications later.

"It's so new that you have to make it work before you can do too much 'blue sky,' " said Gilbert Arbuckle, senior vice president in the information management and research department at Mellon Bank, which is implementing image systems in its wholesale loan and check processing areas.

"It would be very difficult to make a business case to pay for equipment based on customer service benefits," said Mr. Arbuckle. "The equipment doesn't come cheap."

Ms. Stanhope said the major suppliers of image technology, including such as companies as International Business Machines Corp., Unisys Corp., and NCR Corp. have yet to supply complete systems that will allow banks to take full advantage of the technology's potential in marketing and customer service.

NCR Software to Work with Other Brands

By KAREN GULLO

NEW YORK — NCR Corp. this week introduced a line of software that will allow the company's computers to work with computer systems and software from other suppliers.

The software is based on the concept of "open, cooperative computing," meaning that different computers and software can operate together and that computing tasks can be shared among systems in a corporation.

For instance, information inside IBM or Digital Equipment Corp. computers at a bank headquarters can be shared with and computed by NCR systems at branches. Programs that operate under IBM's Operating System/2 and other standard computing platforms will also run on NCR systems.

Glibert P. Williamson, president of Dayton, Ohio-based NCR, said the company will begin selling the software, called Cooperation, in the second half of this year. A new set of financial software for the banking industry developed under the Cooperation concept will be introduced in the third quarter.

"Most banks have four or five different mainframes doing different things – ATM processing, customer information, or trust applications – and different people would have different terminals to access these mainframes," said Mr. Williamson.

"Cooperation will allow the branches to tap into data bases on those mainframes and provide the information to allow selling at the platform level," he said.

Cooperation costs from $30,000 to $90,000 for a system accommodating 16 users, and $90,000 to $180,000 for 64-user system.

Cooperation consists of basic computing components such as software management, security, and communications, plus a set of services for retrieving, managing, editing, and sending information among a variety of computers.

NCR will continue to support customers' existing software, but all new computer systems, including imaging systems for document and item processing due late this year, will operate under the Cooperation umbrella.

The new software is compatible with existing software, but some programs in use at banks will have to be changed to run in the Cooperation framework. ☐

MTI to Buy Trade Services Software Unit

By JEANNE IIDA

NEW YORK — Management Technologies Inc., a New York software vendor specializing in international banking programs, has agreed to acquire the Trade Services System division of Warrington Financial Systems Inc.

MTI will add to its product line the Warrington unit's letter of credit and collection software. MTI plans to buy all of Warrington's outstanding shares for a sum to be determined at the closing Feb. 28.

Sungard Pays $65.3 Million

Early last month, Sungard Data Systems Inc., Wayne, Pa., announced it would pay $65.3 million for all of Warrington except the trade services division. The bulk of Warrington's revenue comes from securities-related back-office software. Sungard provides backup computer services in addition to securities processing systems.

Warrington's trade services division, based in Cambridge, Mass., will become a wholly owned subsidiary of MTI.

Integrated Product Line

MTI offers systems for international banking areas, including commercial lending, foreign exchange, electronic funds transfer, money market trading, and wholesale demand deposit accounting. It plans to integrate the Warrington software into its product line to make it easier for bankers to keep track of their risk levels.

MTI also offers an integrated back-office system that runs on IBM and IBM-compatible mainframe computers. A version runs on fault-tolerant machines from Stratus Computer Corp. that are also marketed by IBM as the System/88.

The version for Stratus also has a trading-room system for foreign exchange and money market dealing, as well as back-office processing.

Useful to Regional Banks

MTI said the Warrington products, in conjunction with the rest of its offerings, could also be used by regional banks to enhance cash management reports to corporate customers.

"There's a trend away from giving the same DDA [demand deposit accounting] system to retail as to corporate clients," said Barrington J. Fludgate, chairman of MTI. He said his company's software can handle the large-volume transactions of corporate accounts and can break down information into greater detail than is required for retail customers. ☐

"Citicorp's Comprehensive Banking System helped us grow from $200 million to $600 million. Now we're counting on it for the next leap forward."

"We selected the Comprehensive Banking System software because we expected it to keep us competitive," recalls Thomas J. O'Shane, president of First Western Bancorp of New Castle, Pennsylvania. "It has."

"With CBS we can originate or enhance new products quickly, keeping us ahead of our competition. With the stability, flexibility and growth capacity of CBS, our founding bank, First National Bank of Western Pennsylvania, has grown from $200 million in assets to $350 million.

"Beyond that, the Comprehensive Banking System software easily absorbed the additional load experienced with our acquisition of Beaver Trust Company. That acquisition nearly doubled our assets to $600 million.

"We are currently negotiating another acquisition which will bring us to over $1 billion in assets. We anticipate that the IBM AS/400 hardware and Comprehensive Banking System software will take the merger in stride.

"As far as we're concerned, CBS and IBM are the unbeatable data processing combination."

If you would like to know more about the flexibility and reliability of Comprehensive Banking System software or to talk with other bankers using the system, contact Joan Skimmons, Citicorp Information Resources, Four Stamford Forum, Stamford, Connecticut 06901, Telephone (800) 243-4222 or (203) 351-4900.

COMMENT/*By Stephen H. Axilrod*

Message from the Markets

The U.S. credit markets have just weathered a very difficult period. The worst is probably over, but skies are far from clear and the wind direction is best described as variable.

The markets had to absorb a large supply of Treasury and related issues, including long-term offerings at the time of the recent regular quarterly refunding and an unusually long 40-year issue from the Resolution Funding Corp. to finance the bailout of thrifts. It took an extraordinary backup in market rates from the lows of late last year to make these financings go.

There were good reasons for the backup, apart from the weight of new supply. The Fed had come to a pause in the easing process, and it began to look – from policymakers' comments if not from the flow of data – as if the pause would be prolonged. Moreover, interest rates had risen sharply in key markets abroad. And a few basis points can be added from the decision to offer something so novel and risky as a 40-year RFC bond in a market environment that was uncertain at best.

A market movement such as we have witnessed in bonds generally also has deeper roots – recognizable only later as they spread more widely. For instance, the October 1987 stock market crash had many proximate causes – program trading, unusually high price-earnings ratios, a feared breakdown in international cooperation – all of which have been tortuously analyzed.

Mr. Axilrod is vice chairman of Nikko Securities Co., New York.

End of a Speculative Era

But in a deeper sense the crash marked the end of a long period of speculative wealth creation, in large part debt-financed, and a shift toward more conservative attitudes in markets. The collapse of the junk bond business accelerated. Acquisitions, leveraged buyouts, and the like became less easy to promote and finance, and real estate prices weakened more broadly around the country.

A shift toward more conservative attitudes was basically good for bonds, but only for relatively safe ones, Treasuries in particular. That shift supported the bond market for some time, and still does to a degree.

However, the bond market got carried away with the idea that the economy was weak and it would be simple for the Federal Reserve to control inflation. The economy probably is on the weak side, but the bond market now realizes that it will not be simple for the Fed to control inflation. That's the underlying message from the yield backup since the beginning of the year.

It won't be simple because more inflation than the Fed apparently will tolerate now seems to be embedded in the economy. The basic problem lies with labor costs.

After rising at a very moderate pace for several years, unit labor costs ratcheted up to about a 4.5% rate of gain last year. That happened partly because a number of years had passed without further progress in reducing price inflation, and during the past two years inflation had actually crept up.

Thus, with the economy near full employment and real income threatening to deteriorate, wage pressures were bound to become stronger. The wonder is that they have remained fairly well contained even so.

Monetary policy is now in a vise. It cannot ease significantly without building more inflation than it wants into the economy. It cannot tighten significantly without putting even more downward pressure on corporate profits and precipitating a deeper recession than it would like to see. Bonds have been priced to better reflect the dilemma and risks inherent in that situation.

Reaction from Abroad

The constraints faced by domestic monetary policy in the United States were made even clearer by actions taken abroad. Interest rates have risen sharply in Germany and Japan, as those countries decided to curb their own inflation potential. Inflation rates there are less than in the United States, but the value of their currencies had been declining on exchange markets and threatening even more inflation.

Their actions signal that the United States can no longer expect foreign countries readily to support spending here. In effect, it has now become more expensive for the United States to attract funds from abroad. Actions taken abroad have effectively tightened monetary policy here even while the Federal Reserve has, by its own lights, maintained an unchanged stance.

Whatever type of landing is ultimately made by the U.S. economy as it adjusts to lower inflation, the markets have told us that it will not be as soft as seemed probable a few months ago. Indeed, the landing of the U.S. economy could get particularly hard if efforts are made – either directly here or indirectly as a result of actions abroad – to reduce inflation too rapidly. Some progress in fighting inflation must finally be made, but the various fragilities in U.S. markets – with the Drexel Burnham situation only the latest indicator – all argue for making progress slowly. ☐

THE LOBBYISTS/*By Barbara A. Rehm*

ABA Fights Insurers

Banking industry lobbyists are waging a counteroffensive against the insurance lobby's campaign to convince Congress that states should not be permitted to let banks enter the insurance business.

It's not clear which side is winning, but House Banking's financial institutions subcommittee has scheduled hearings for April 4-5 on the matter.

The furor began late last year when a federal appeals court cleared the way for **Merchants National Corp.** to sell insurance through two state bank subsidiaries in Indiana. Indiana law, unlike federal law, permits banks to sell insurance.

Philip S. Corwin

In January, the **Independent Insurance Agents of America** papered Capitol Hill with warnings that the decision opened the door for states to grant all sorts of new powers to banks.

This month a coalition of bank trade groups led by the **American Bankers Association** responded with its own letter to lawmakers.

Ten House Banking Committee staffers on Monday viewed a videotape produced by the ABA that explains the benefits of letting banks into the insurance business, namely, greater competition and lower prices for consumers.

"There is no substantive objection," from the staffers claims **Philip S. Corwin**, the ABA's director of operations and retail banking. "In fact, there is a lot of agreement that consumers would be better off."

If the insurers push for a bill to ban banks from insurance, Mr. Corwin says, "That is something the industry is completely unified in fighting . . . I think that would be the biggest battle since the powers moratorium." In 1987, Congress barred regulators from expanding bank powers for a year.

* * *

Consumer Legislation Is Lilac's Prime Target

Fifty banking lobbyists are in Boca Raton, Fla., this week for the annual meeting of the **Legislative Liaison Advisory Council**, or Lilac, as the group is called.

"This meeting has, over the years, grown to be a fairly important meeting," said **Edward L. Yingling**, executive director government relations at the **American Bankers Association.** "It's a real opportunity to get together, learn, build team spirit, and lay out the strategy for the coming year."

Charles J. Zwick, chairman and chief executive officer of **Southeast Banking Corp.**, Miami, is the keynote speaker. Mr. Yingling said the lobbyists usually invite a banker to give them an overview of the industry.

These lobbyists' No. 1 goal is fending off consumer interest legislation, such as measures that require banks to cash government checks or provide lifeline checking. But they are also interested in battling attempts to use banks in the war on drugs. Of special interest right now is a bill being contemplated by Sen. John Kerry, D-Mass., which would revoke a bank's charter if it was caught laundering money.

Lawmakers addressing the group include: **Sen. Ernest F. Hollings**, D-S.C.; **Sen. John Breaux**, D-La.; and **Sen. Bob Graham**, D-Fla.; **Rep John Hiler**, R-Ind.; **Rep. Bill McCollum**, R-Fla.; and **Rep. Joe Moakley**, D-Mass.

* * *

Hohlt to Quit League

Controversial S&L lobbyist **Richard F. Hohlt** is leaving the **U.S. League of Savings Institutions** staff. Soon after March 16, his 10-year anniversary with the trade association, Mr. Hohlt will become an industry consultant.

Mr. Hohlt is likely to hook up with an existing consulting firm, but plans to devote half of his time to a contract with the league.

Richard Hohlt

"He is going to go out on his own, bottom line, but I have asked him to stay on as a consultant with 50% of his time," says league president **Frederick L. Webber.**

The league has gone through a spectacular metamorphosis in the past few years, from lobbying powerhouse to lobbying pussycat.

Mr. Webber admits that since he took over in November 1988, he has tried to recast the league's image as a trade group ready to work with – not against – the government.

Mr. Hohlt, 41, is part of the old guard at the league. He is alternately credited and blamed with persuading lawmakers back in 1987 to keep the recapitalization of the insolvent Federal Savings and Loan Insurance Corp. to $10 billion, a sum that turned out to be a fraction of what was needed.

A second bailout followed – $50 billion last August – but this time things didn't turn out so well for the industry. The law imposes tough capital requirements and numerous operating restrictions on thrifts. Thus the industry is divided into those institutions that can survive the federal bailout and those that are doomed by it.

This division is making it tough for the league to represent the industry.

Mr. Webber insists that Mr. Hohlt is leaving mainly because he has salted away 10 years with the association and is ready for new challenges.

"I don't think Rick is a victim," he says. "He has a strong constituency in my membership. With this we get the best of both worlds."

Mr. Hohlt refused to answer questions about his future. ☐

DEALS

Guarantor Grows Wary of Junk-Bond-Backed Note Issues

By CAREN CHESLER-MARSH

Securitization of leveraged-buyout loans and junk bonds may be in for a slowdown because Financial Security Assurance, the guarantor that made many of these deals possible, is temporarily curtailing its activity in this market.

FSA will cease to guarantee floating-rate note issues in Europe, where many of these deals have been done, until the outstanding issues begin to trade better, according to Peter Hoey, managing director at FSA.

Earlier last year these deals – typically 10-year floating-rate note issues – were trading at spreads of 20 to 25 basis points over the London interbank offered rate. They are now trading closer to 35 basis points over Libor.

Most market officials attribute that drop in price to oversupply in the market and the perception that many more deals will follow. In the fourth quarter alone, five transactions totaling $789 million in new deals were launched that carried FSA guarantees. All but one were backed by junk bonds. The other deal was collateralized with bank loans to highly leveraged companies.

"That busy period of activity caused the market to be apprehensive that they would be looking at about $3 billion [in new deals] a year," Mr. Hoey said. "That was a mistaken assumption on the market's part. Nevertheless, we felt it necessary to ensure the market that we would exhibit discipline."

Mr. Hoey points to one deal in particular that he believes pushed the market to the limit: a $625 million deal structured by Banque Nationale de Paris that was backed by 30 LBO loans. "That particular transaction really resulted in the congestion. Prior to that, we had a much more orderly flow," Mr. Hoey said.

The investor base was limited by two major factors, he explained. The deal was subject to withholding tax in certain countries, and it was offered as registered securities – whereas most Eurobonds are in bearer form.

When demand for any issue is limited, the available buyers can charge a premium for the securities. And at $625 million, it was much larger than the previous deals.

Participants in that transaction, however, do not believe it was their deal that moved the market. "Trading levels started deteriorating back in July and August," one source said, causing spreads on FSA paper to widen.

While tax considerations may have limited the investor base somewhat, the deal is nearly all sold and is scheduled to close today, according to Adam Lerrick, managing director of Greenwich, Conn.-based Voute Coats Stuart & O'Grady LP, which helped structure the deal.

Other monoline insurers, such as Capital Markets Assurance Corp., are trying to break into the credit-enhancement market.

Barclays Tops Foreign Banks as Load Agent In U.S. Loan Syndications

Pilgrim Bank Loan Fund Reaches $1 Billion Limit

The Pilgrim Prime Rate Trust, the first mutual fund to invest in bank loans, has reached $1 billion in assets.

The fund, which began in May of 1988, received approval from the Securities and Exchange Commission to grow to $1 billion from $500 million. By slowly taking in $3 million to $4.5 million in new capital a day, it has reached that limit.

Taking capital in slowly is one of the reasons Pilgrim is unique among the bank loan funds. Many of them, such as Merrill Lynch Prime Fund Inc. and Eaton Vance Prime Rate Reserves, have raised most of their funds in one lump sum.

"We have the leisure to sit and study the credits," because the money trickles in slowly, said Palomba Weingarten, chairman and chief executive officer of the Pilgrim Group Inc., which manages the fund.

Pilgrim's slower approach to raising capital is more efficient, Ms. Weingarten said, because it has meant that nearly all of the capital is now invested in bank loans.

Merrill's $1.7 billion fund, and Eaton Vance's $1.75 billion fund, for instance, are not fully invested in bank loans yet – although Eaton is 85% invested. The unused capital is invested in commercial paper.

Since commercial paper yields are typically lower than bank loan yields, that would ostensibly make it more difficult for those funds to hit their yield targets. But Ron Molloy, vice president and portfolio manager at Merrill Lynch's fund, says this process was accounted for when the fund was created. Investing in commercial paper as an intermediate device, "is the way it works," he said.

Pilgrim's fund now holds 72 credits, although Pilgrim's Ms. Weingarten declined to name any of the credits. It has held 95 different credits over its 20-month life. Some of these were sold by Pilgrim, others merely paid down. For instance, the fund once owned a $3 million loan participation to Campeau Corp., but that was paid down last summer when Allied Department Stores sold its Ann Taylor franchise.

While the fund will buy highly leveraged deals, it shies away from foreign commodity-based loans, high-technology loans, and loans to single-product companies. It prefers loans to manufacturing and service companies and holds major positions in the supermarket sector, Ms. Weingarten said.

Chemical Underwrites ESOP Private Placement

Chemical Banking Corp. recently beat out a Wall Street firm as private-placement agent on a $110 million ESOP plan by taking a page from Wall Street practice and underwriting the deal itself.

The employee stock ownership plan financing is for Southern New England Telephone Co. Usually with a private placement, the agent just finds investors. But in this case, Chemical is making the loan itself, and then assigning it to the permanent investors – six insurance companies.

Ironically, the Wall Street firm competing against Chemical was not willing to take that unusual approach for a private placement – even though underwriting, of course, is standard practice in the Street's public market corporate bond deals.

"We were anxious to get the ESOP in place," explained Lynn Carroll, a staff specialist at the company based in Hartford, Conn. The company wanted to set up its ESOP before the tax laws change again, she said.

Southern New England Telephone was planning to install an ESOP last year, but held off when legislation was introduced last summer changing the tax law. As a result, the company does not qualify for the old regulation that made ESOP debt partially tax-exempt.

"We didn't want to be caught again," Ms. Carroll said.

Demand was strong for the double-A-rated debt, which was priced at 95 basis points over six-year Treasury bonds, according to a market source.

Banks had an advantage in raising ESOP debt when it was tax-exempt. When the law changed, it was assumed that investment banks would win most of the business from highly rated public companies, since those companies were likely to tap the public debt market.

Resolution Trust Corporation

Asset Review
Contracting Opportunities

Firms with expertise in the fields of accounting, auditing, real estate, and law are being sought to evaluate asset portfolios of savings associations operating under the direction of Resolution Trust Corporation conservators. The RTC currently has more than 300 savings associations with assets in excess of $125 billion under its supervision. These institutions vary in size and geographic location; therefore, proposals from national and local firms (or groups of firms) will be considered.

Documents explaining the potential opportunities will be available March 1, 1990. If you wish to receive a complete description of the services required, along with the requisite RTC Contractor Registration Forms, please respond in writing by that date to:

Limited Value Seen in Power To Underwrite

By ROBERT M. GARSSON

WASHINGTON — By early summer, a handful of U.S. commercial banks could begin underwriting corporate stocks for the first time since the Depression. But that historic step may only mask the fact that the newest underwriting powers are of limited value for most of the banking industry.

ANALYSIS: *Follow-up on the news*

Commercial banks have already been given the green light by the Federal Reserve to underwrite corporate debt, commercial paper, municipal revenue bonds, and asset-backed securities – within strict limits. Now, J.P. Morgan & Co., Bankers Trust New York Corp., and Citicorp are likely to get the nod to underwrite common stock.

But the new powers "haven't been very important yet," said Ronald Mandle, a bank stock analyst with Sanford C. Bernstein & Co. "Some banks have gotten some incremental income. But it's not the kind of thing that's going to change anybody's return on equity or how we look at their stock price."

To many observers, the most important aspect of the new powers is that they have given banks an opportunity to become familiar with corporate debt and equity underwriting in anticipation of full-scale repeal of the Glass-Steagall Act.

And for a handful of big banks, the Fed's approval of common stock underwriting is expected to come just as corporate America shifts its emphasis from debt to equity.

A Curiosity

For most banks, new underwriting powers have been more a curiosity than a matter of strategic importance.

Starting in 1987, the Fed – seizing upon a loophole in Section 20 of the Glass-Steagall Act – began to authorize banks to underwrite securities that were previously out of bounds. The powers were accompanied by some tough restrictions.

Here's the Rub

First, revenues from the new activities cannot exceed 10% of the revenues from underwriting activities that are explicitly permitted banks, such as underwriting municipal revenue bonds. Second, banking concerns are required to erect firewalls designed to put some distance between the insured bank and its underwriting affiliate.

The percentage limitation has

Schumer Proposes a Twist On IRAs to Boost Savings

By ROBERT M. GARSSON

Charles E. Schumer
Democrat of New York

WASHINGTON — Dissatisfied with the administration's proposal for a tax-advantaged family savings account, Rep. Charles E. Schumer, D-N.Y., wants to reinvigorate the individual retirement account with a "deduct now, save later" plan.

Mr. Schumer's bill, which he said he plans to introduce shortly, is likely to add momentum to legislative efforts to beef up the U.S. rate of savings. Congress returns today from a weeklong break.

Deduction When Returns Filed

Mr. Schumer's bill would permit families to take a deduction at the time they file their tax returns. However, they would not have to contribute money to the plan until the next tax year.

That means the IRA can be funded with cash already returned by the government.

In addition, the senior House Banking Committee Democrat said he plans to propose a payroll deduction feature that would permit banks and other financial services providers to market IRAs to companies, as well as to individuals – much as 401(k) plans are marketed now.

"The lack of savings in this country is the greatest problem our economy faces," Mr. Schumer said in an interview last week.

The Bush proposal, he said, is welcome in that it spotlights the problem. But it doesn't go far enough.

"It was budget driven," he said. "The tax benefits are too far down the road" for the plan to attract most Americans.

Round One: Bankers Best Credit Unions In Colorado

By ELLEN MEMMELAAR

NEW YORK — In a bank-credit union skirmish that could reverberate nationally, bankers in Colorado won a victory in committee on legislation that would prevent state and local governments from subsidizing credit unions.

The bill, promoted by the Colorado Bankers Association as part of a broader offensive against credit unions, passed a legislative committee last week and could go to a vote in the state House of Representatives within a week.

Although the bill is expected to have minimal impact on existing credit union operations, its passage could indicate that credit unions are vulnerable to the attack that bankers are mounting against their tax-exempt status.

The Colorado legislation has already gone further than any

Scottish Bank Will Acquire BankWorcester

By TOM LEANDER
and JOHN EVANS

In a move to expand its New England presence, Royal Bank of Scotland Group announced Friday that its U.S. subsidiary has agreed to buy BankWorcester Corp., Worcester, Mass., for $149 million in cash.

Royal Bank of Scotland already owns Citizens Financial Group Inc., a $3 billion-asset banking company based in Providence R.I. BankWorcester, parent of Worcester County Institution for Savings, is a profitable thrift with $1.2 billion in assets.

'Important New Market'

The acquisition will enable Citizens "to develop an important new market in Massachusetts and to increase" its customer base, said George Mathewson, Royal Bank's director of strategic planning. He said Royal also hopes to acquire banks or thrifts in Connecticut, but declined to disclose how large an presence it hopes to establish in the United States.

Although analysts said it was too early to predict whether Royal's purchase would usher in a wave of bank and thrift acqui-

Big Canadian Banks Look South For Acquisition Opportunities

By JAMES R. KRAUS

NEW YORK — Stymied in their efforts to expand into Asia, Europe, and Latin America, three of Canada's big banks are launching a new push south of the border.

Last month, Bank of Montreal chairman Matthew W. Barrett told the bank's annual meeting in Montreal that he plans to double earnings from the United States, to 50% of the bank's profits, from about 25% now.

The bank's parent, Bankmont Financial Corp., already owns Harris Bankcorp Inc., a $12.1 billion-asset, Chicago-based banking company.

Acquisitions Likely

Royal Bank of Canada and Canadian Imperial Bank of Commerce, meanwhile, have publicly stated that they intend to increase their U.S. business, most likely through acquisitions.

Neither bank has set a growth target, but both have said they want to boost their U.S. presence by getting into retail banking and expanding lending to small and medium-size corporations.

Two other banks, Bank of Nova Scotia and Toronto Dominion Bank are for the moment refraining from expansion in the U.S. market. Bank of Nova Scotia, second-biggest Canadian lender in the United States after Bank of Montreal, is determined to retain an international presence, however. Toronto Dominion has ruled out acquisitions in the United States but has applied for limited securities underwriting powers.

PEOPLE *in the news*

U.S. MasterCard Marketer Has a Handle on Audience

By YVETTE D. KANTROW

LOS ANGELES — Several weeks ago, Keith Kendrick went shopping for a diamond engagement ring. Although he was not getting married, the pressure was intense. The ring was to be a prop in a forthcoming MasterCard television commercial, and it had to appeal to what Mr. Kendrick calls Mainstream America.

"It couldn't cost more than $1,000," said Mr. Kendrick. Otherwise, he said, the commercial would just not be believable to the people that MasterCard most wants to reach.

As senior vice president in charge of marketing in the newly created U.S. credit card group at MasterCard International, Mr. Kendrick must make sure the association's advertising strikes the right chord in Middle America. The new campaign, created by the Lintas: New York ad agency and set for launch on March 19, will continue to use the "Master the Moment" theme. But in Mr. Kendrick's words, the updated ads feature "people who look like people you know doing things that the average American does.

"These are real people confronting real issues," he said, referring to an approach that he hopes will differentiate MasterCard from the more upscale, travel-oriented advertising of American Express and Visa.

Mr. Kendrick, 32, joined New York-based MasterCard in 1985 as an assistant to then-president Russell Hogg, working on planning projects. He had earned a master's degree at Northwestern University and came to MasterCard from Chemed Corp., Cincinnati.

Keith Kendrick

Mr. Kendrick was most recently vice president and business manager of the gold MasterCard, and takes credit for helping to turn that product into a leading premium card.

Logo Has Been Given Fresh Look

His new role involves responsibility for marketing all credit card products, and he reports to executive vice president Peter S.P. Dimsey. That job makes him an integral player in MasterCard president Alex W. Hart's plan to build on MasterCard's brand recognition, which some consumer research has shown to be as strong, and perhaps stronger than, Visa's.

It is a challenge that Mr. Kendrick seems more than ready to accept.

"American Express, Optima, and Discover – their IDs are very important," he said. "Our role is to have a strong brand that's easily recognizable as a high-value MasterCard." As part of that effort, the association at its annual meeting last week unveiled a more brightly colored logo using a more contemporary-looking type face.

Mr. Kendrick seems well-suited to lead MasterCard's quest for Middle America. Given his clean-cut appearance, it is easy to imagine Mr. Kendrick as the young man in one of MasterCard's new commercials who persuades his girlfriend not to leave town by presenting her with an engagement ring – the very one that Mr. Kendrick shopped for. ☐

Chemical Unit Imposes 20% Job Cut

By JED HOROWITZ

NEW YORK — Chemical Bank in the past two weeks cut 100 of 500 jobs in its New York City-based human resources department, bank spokesmen confirmed.

The layoffs are part of a continuing housecleaning at Chemical Banking Corp., the nation's sixth-largest banking company.

This year, Chemical has acknowledged cutting 80 jobs at an Ohio-based residential mortgage subsidiary, 20 marketing and administrative posts in the New York-area branch system, and another 20 in the leveraged leasing and product development areas of the capital markets group.

The latest round of pink slips affected employees ranging from vice presidents in compensation planning to clerks who process benefit statements, a spokesman said. Some slots had been vacant, he said, but he would not specify how many employees were let go.

The latest layoffs affect no one in line businesses, but selective trimming is occurring there as well, according to bank sources.

An outsider familiar with the human resources department said he was told that Chemical Bank – which employed 16,500 at yearend – is aiming for a 20% cost reduction in this year's first quarter. Cutbacks have included using two-color rather than four-color printing for internal employee publications.

The Chemical spokesman said he would not comment on speculation.

The holding company, which employs 29,000 people, includes workers in Chemical's Texas Commerce Bancshares and Chemical Bank New Jersey subsidiaries.

The company's noninterest expense rose 11.4% last year, to $2.73 billion, largely because of costs at the two subsidiaries. The spokesman would not comment on the extent of layoffs at those units. ☐

Federal Regulators Seize Franklin Savings

By BILL ATKINSON

WASHINGTON — Franklin Savings Association, an Ottawa, Kan., thrift that made heavy investments in mortgage securities, was placed into conservatorship on Friday by the Office of Thrift Supervision.

The seizure occurred just one day after Franklin's top management expressed optimism that an examination by thrift regulators into several accounting issues would have a favorable outcome.

The $11.4 billion-asset institution was the largest in Kansas and at midyear 1989 was 24th-largest in the thrift industry. After recognizing losses required by the OTS it will have a negative $44.3 million in tangible-core capital, said Marc Adams, a spokesman for the thrift regulator.

Franklin will maintain normal business hours and operations under the Resolution Trust Corp., which will run the institution until its assets can be sold or otherwise taken off the government's books. John Carr, former chief executive officer of Beverly Hills, Calif.-based Gibraltar Savings, was appointed the RTC's managing agent.

Last Thursday, the institution reported $3 million in income for the fourth quarter of 1989, reversing a $21.5 million loss in the year-earlier period. In disclosing its earnings, Franklin said that federal regulators were investigating several accounting issues, including treatment of $200 million of deferred losses on financial futures contracts used for hedging purposes.

Franklin grew rapidly from just $200 million in assets in 1981 through purchases of high-yield, high-risk mortgage securities and derivative products. ☐

Bank of New England Plans 11% Layoff

By DAVID NEUSTADT

NEW YORK — Bank of New England plans to lay off as many as 2,000 employees, about 11% of its 17,500 work force, according to a report from Reuters. A bank spokeswoman told the wire service that the layoffs would be in addition to reductions from attrition and sales of assets.

"Essentially we have a very preliminary number of approximately 2,000 layoffs across the company," the spokeswoman told Reuters. "It could be lower, but it it won't be higher."

Bank of New England chairman H. Ridgley Bullock had previously announced that layoffs were likely.

Cutting 2,000 employees could save the bank more than $60 million a year or about 50 cents a share, estimated J. Richard Fredericks, a bank analyst at Montgomery Securities in San Francisco.

Fourth-Quarter Loss Expected

Analysts are still waiting for the bank to announce its fourth-quarter results. The bank has said that it expects to post a loss of about $1 billion.

Meanwhile, the joint House-Senate banks committee of the Connecticut legislature passed a bill on Friday that would permit interstate banking, according to Preston King, president of the Connecticut Bankers Association. Mr. King said he expects to see the bill signed into law before the end of March.

The bill would allow Bank of New England to sell Connecticut Bank & Trust Co. to a bank from outside New England. Citicorp, Chase Manhattan Corp., and Fleet/Northstar Financial Group are mentioned as the most likely buyers.

In its current form, the bill would also allow out-of-state banks to set up new banks in Connecticut after three years. But that part of the bill is very controversial and may not make it through the Legislature, Mr. King said. ☐

Drexel Brokers Charged in Scam

By ROBERT M. GARSSON

WASHINGTON — The Federal Deposit Insurance Corp. charged last week that employees of Drexel Burnham Lambert Inc. and the former E.F. Hutton & Co. schemed to divert insured deposits from a Texas thrift to shore up an attempted takeover of U.S. Home Corp.

In a suit filed in U.S. District Court in Dallas, the FDIC said Guaranty Federal Savings and Loan Association lost $68.5 million as a result of the scheme, while the brokers involved gained $49.6 million in commissions and markups. Guaranty Federal, which had $2 billion in assets, failed in 1988.

The FDIC suit says that Drexel was U.S. Home's investment banker at the time of the attempted takeover, and it charges that personnel in Drexel's Beverly Hills office advised and encouraged Paul Sau-Ki Cheng and Simon E. Heath to attempt the takeover.

The suit accuses the pair, former cochairman of Guaranty Federal, of diverting profits from the trades of U.S. government securities into private accounts, while channeling losses into the thrift's account.

The FDIC is seeking $129.2 million in actual damages and $387.6 million in punitive damages. ☐

How To Materially Lower Volatility of Loan Losses

Many bankers are coming to the realization that they are undermanaging the risk in their commercial-loan portfolios. Loan risk is both individual and collective. It depends on the default probability of specific loans. But it also depends on the relationship among default probabilities.

Banks lay considerable stress on individual loan risks but pay scant attention to collective ones. The industry needs to develop more confidence in the available tools for assessing and modifying collective risks.

Consider two loans, A and B, made to borrowers with equally powerful balance sheets and therefore equal probabilities of default. Loan A, however, is likely to default when the rest of the bank's portfolio is experiencing little or no difficulty, while loan B is apt to go bad when the rest of the portfolio is also going into the tank. Loan A is said to be negatively or inversely correlated with the rest of the portfolio. Loan B is said to be positively correlated.

Quite obviously, despite the fact that both loans are equally risky when viewed individually, the bank should prefer A to B because adding that loan to the portfolio will lower the risk of simultaneous defaults while adding loan B will increase that risk. Indeed, because borrower A is a more desirable customer from the bank's overall viewpoint, it should be willing to consider charging him a lower loan price than it charges borrower B.

In point of fact, few banks set their loan charges according to an analysis of how the fortunes of new borrowers are likely to move together or "covary" with those of the existing borrower population. Banks don't normally compute borrower covariances or correlations, primarily because of doubts about the value of such calculations.

To be sure, correlations among borrowers are not especially stable over time. But that may not be very important.

The key question is whether groups of borrowers who are negatively correlated tend to remain so, to greater or lesser degrees, and whether the same is true for those who are positively correlated. If the answer is yes, a bank can normally benefit by adding to the portfolio borrowers with historically inverse default relationships and eliminating from the portfolio those with traditionally positive loss linkages.

Retrospective Tinkering

To test the usefulness of historic correlation data, Oliver, Wyman & Co., a New York-based consultant to the financial services industry, constructed the following example. It took the actual 1988 customer mix of a real-life bank and assumed that this same mix had obtained during the period from 1973 through 1980. It then calculated the 1973-1980 standard deviation of loan losses – the square root of the variance of losses from their mean value – for this mix of loans. The calculation was made using data on the correlation of bankruptcies among industries during that same eight-year period. Since the standard deviation measures the extent by which actual losses diverge from their average or expected value, it is a valid proxy for overall credit risk.

The next step was to do some retrospective portfolio tinkering, based again on the 1973-1980 bankruptcy data. Oliver, Wyman found that roughly 10% of all industries were negatively correlated from 1973 through 1980.

For example, the correlation of losses between the chemical and the textile industries amounted to a negative .34. This means that every 1% increase in loss rates among chemical producers was associated with a 0.34% decrease in loss rates among textile makers.

'Do borrowers who are negatively correlated tend to remain so?'

Such a negative correlation seems intuitively plausible since chemicals are widely used in fabric manufacture. So the textile industry may benefit from falling chemical prices, which of course damage the chemical companies, and may be hurt by rising chemical prices, which help the chemical companies.

Other negative relationships are somewhat less intuitive. For example, an improvement in the fortunes of general contractors was associated with a decline in the fortunes of the textile industry. Loss correlations between the two amounted to a negative .65 from 1973 through 1980.

Of course, many businesses were positively correlated – and often strongly so. Examples were food manufacturing and retail furniture as well as other retail and some services industries.

Favoring the Negative

Oliver, Wyman simply increased the proportion of the portfolio lent to pairs of industries showing high negative correlations and concomitantly decreased the portfolio weighting for pairs of businesses exhibiting high positive associations. For example, it increased loans to textiles and chemicals and reduced those to the retail and services sectors.

Then it recomputed the standard deviation of losses. This exercise in retrospective portfolio tinkering managed to lower 1973-1980 loan-loss variability by some 17%. (The consultant might also have lowered the bank's risk by substituting loans to pairs of borrowers who were less positively correlated than other pairs of borrowers. It may be possible to find industries that are somewhat interdependent but always more independent of each other than are other industries.)

To test the permanence of the improvement in credit quality, the consulting firm redid the experiment for a recent period. That is, it calculated the standard deviation of losses from 1981 through 1988 for the bank's original portfolio as well as for the portfolio with the revised loan weightings. This time, of course, it based the calculation on the correlation of bankruptcies since 1980.

If the correlations prevailing in the 1973-1980 period were directionally valid, then the portfolio adjustments made using these data would serve the bank well in subsequent years. That, in fact, turned out to be the case. The standard deviation of losses for the portfolio with the revised loan weightings was 32% lower during the 1981-1988 period than that for the unadjusted portfolio.

History Isn't Bunk

The upshot seems to be that banks can materially improve prospective credit quality through retrospective analysis. Negative loss correlations among industries tend to remain negative and positive correlations tend to remain positive. This may not be true for all types of borrowers, but it is apparently true for enough of them to warrant intensive study of the available historic data on customer covariances.

A bank that succeeds in reducing loan-loss variability can afford to operate with less capital per dollar of loan assets. If loss volatility was previously so great that the bank felt compelled to hold more capital than the regulators required, a reduction in that volatility can lead to

CRIME BLOTTER/ *By Tom Leander*

Con Artist Draws 25-Year Sentence

A federal judge in Bloomington, Ind., sentenced Bridget Jones last week to 25 years in federal prison for her part in a $10 million laundering scheme.

According to Bloomington U.S. Attorney Patrick Chesley, Ms. Jones and her former husband, Richard Jones, traveled the United States promoting loans from their private finance company to people attending financial planning seminars.

Mr. Chesley said the couple offered million-dollar loans for flat rates between $2,000 and $4,000, and then left town, without turning over any money to customers. Ms. Jones deposited the $10 million earned in the scam in 120 bank accounts, and then wired the money to a numbered account in Uebersee Banc, Zurich. They subsequently wired the money to a correspondent bank in New York.

Richard Jones died in 1986. Ms. Jones was convicted of mail fraud and conspiracy in 1987.

Thief Strikes While Cops Are on Clue Hunt

As police were combing the vault of Somerset Savings Bank in Somerville, Mass., for clues following a robbery, a thief hit a nearby branch of the same bank.

At 8:30 a.m. on Feb. 10, two robbers apparently cut a two-foot-square hole from an office over the bank vault at the Somerset branch in Union Square, then shimmied down into the vault and stole an undisclosed amount of money, according to Somerville police Officer Timothy Nargi.

When two bank employees opened the vault, they were ordered to lie on the floor as the thieves fled.

As police were investigating Union Square branch crime, a blonde man walked into Somerset Savings Bank banch on Broadway and told a teller, "I have a bomb." The teller handed over about $200 and the man fled, police said.

The two heists were unconnected, according to Officer Nargi of the Somerville police.

Police on Coast Kill ATM Crime Suspect

A police officer shot and killed a suspect after he allegedly robbed a man at a Bank of America automated teller machine in Long Beach, Calif.

On the night of Feb. 9, a passing motorist tipped off Long Beach police from a car phone that a "suspicious individual" was hiding in the bushes near a Bank of America ATM, according to officer George Fox, a Long Beach homicide detective.

When officers James Hill and Ralph Robbins reached the bank, which was on the corner of Willow Street and Daisy Avenue in Long Beach, they saw two suspects beating a man who had apparently just withdrawn cash.

One of the suspects made a run at Officer Hill clutching a "gunlike" object, the officers later said. Officer Long fired and hit the man, who continued to flee.

Officer Robbins pursued the man for two blocks, where he shot and killed him where he was crouched behind a car. The man was still holding the object, which turned out to be the victim's black wallet, Officer Fox said.

Police identified the slain suspect as 22-year-old Dennis Moore. The second suspect, 24-year-old Keith Hughes of Compton, Calif., was arrested near the ATM. There will be an investigation into the shooting, Officer Fox said.

Big Canadian Banks Launch Push South of the Border

Continued from *page* **1**

Royal Bank chairman Allan Taylor told analysts in September that he is studying one or more U.S. retail banking acquisitions. The bank also plans to be a major player in increased cross-border trade arising from the U.S.-Canada trade agreement; it will open a branch in Buffalo this month.

Securities Underwriting Power

Both Royal Bank and Canadian Imperial obtained securities underwriting powers from the Federal Reserve Board last month in a move to broaden their activities in the United States.

The two banks plan to use their new powers to underwrite and distribute corporate debt issues on behalf of their Canadian and multinational customers.

In addition to underwriting, Bank of Montreal, Royal Bank, and Canadian Imperial seek to develop a more sophisticated range of activities, including asset securitization, private placements, mergers and acquisitions, corporate restructurings, equipment leasing, and treasury operations linked to interest and foreign exchange management.

Mr. Barrett said much of Bank of Montreal's growth will come from "leveraging" its U.S. operations. The rest will be generated by acquisition-based expansion, he said.

Expanding Retail Presence

"We would like to be a bigger retail bank in the U.S. The U.S. banking market is very fragmented, while we operate out of 1,500 locations in Canada," Mr. Barrett said, referring to the tradition of nationwide banking in Canada. "We've a lot to bring to the party in the U.S."

He wouldn't disclose potential acquisition targets, although he said Bank of Montreal would be free, through regional interstate banking compacts taking effect within a year, to expand into 30 states from its Illinois base.

"Our expansion in neighboring states," Mr. Barrett said, "is likely to be directed from Chicago towards the New York area, where we also operate, to try and develop that elusive thing, synergy, in our banking operations."

Mr. Barrett stressed that Bank of Montreal was in "no hurry" to make an acquisition, indicating that he's prepared to wait for the right candidate to emerge.

How Canadian Banks Rank as U.S. Players
Data as of midyear 1989

	Assets ($ in billions)	Full banking offices
Bank of Montreal	$18.9	16
Bank of Nova Scotia, Toronto	$8.1	9
Toronto Dominion Bank	$5.6	4
Royal Bank of Canada, Montreal	$4.5	8
Canadian Imperial Bank of Commerce, Toronto	$3.9	9
National Bank of Canada, Montreal	$1.3	4
Totals	$42.4	50

Source: American Banker

Bank of Montreal, Royal Bank, and Canadian Imperial rank among the top 10 in North America. Royal Bank had $95 billion in assets as of October 1989, of which $5.9 billion were held in the United States. Canadian Imperial had $84 billion in assets, $8.65 billion in the United States; Bank of Montreal, $67 billion, $12.1 billion in the United States.

All have had a U.S. connection since they set up offices in the last century to serve expanding trade and industry. Bank of Montreal has had a New York agency since 1858 and a Chicago agency since 1861. Royal Bank has had a U.S. office since 1899, and Canadian Imperial, a New York branch since 1872.

In the 1970s, the three banks became heavily involved in real estate and energy-related lending in the United States.

More recently, they have been among the leading banks in arranging financing for leveraged buyouts. For example, Canadian Imperial has about 60% of its $2.2 billion leveraged-buyout loan portfolio in U.S. credits and 38.5% of its real estate loan portfolio, or $1.77 billion, in the United States.

Factors Prompt Refocusing

Several factors have prompted these Canadian banks to refocus on the United States. Bankers and analysts say that Canada is overbanked, competition is getting tougher, there is little room to expand, and margins on lending at home are razor thin.

They add that Canadian banks lack the resources to compete against the big European banks and cannot obtain much market share in Japan because of protectionist sentiment there. The banks also have lost interest in lending to the debt-ridden Latin American countries.

Royal Bank, Canadian Imperial, Bank of Montreal, Bank of Nova Scotia, and Toronto Dominion hold 82.5% of the $443 billion in Canadian banking assets.

"Canada's a market about the same size as California," said Allyn W. Keiser, senior vice president and general manager of Canadian Imperial's New York branch. "It's much smaller and offers much less incremental opportunity. In the U.S., we've got a much greater opportunity to grow."

U.S. Thrift Acquisitions?

Analysts add that Canadian bankers believe the growing number of U.S. savings and loan associations being sold because of the thrift industry crisis will permit them to acquire banking franchises at cheap prices.

"Canadian banks are playing a wait-and-see game at the moment," said A. Roy Palmer, a banking analyst with Bunting Warburg Inc., Montreal. "The strategy is to be opportunistic."

With more than 100 years of nationwide banking experience at home, the banks believe they have an edge over their U.S. counterparts when it comes to running large-scale branch communications and clearing systems.

However, analysts express doubt at whether Canadian banks will find it all that easy to move into U.S. retail or middle market corporate banking.

"Markets in the U.S. are fragmented," said Geoff J. Francolini of Loewen, Ondaatje, McCutcheon & Co., Toronto. "There are a whole set of different requirements and different regulations. The consensus is that they will move into the U.S. but that they will move in gradually." □

This announcement is neither an offer to sell nor a solicitation of an offer to buy these securities. The offer is made only by the Offering Circular and Prospectus Supplement and the related Prospectus.

California Thrifts Help EDS Profits

DALLAS — Data-processing contracts with Great Western Bank and World Savings, two of the 10 largest thrifts in California and the nation, helped propel Electronic Data Systems Corp. past $5 billion in revenue last year, the Dallas-based computer services company said.

EDS said it increased revenue by 13% in 1989 to $5.47 billion, and net income 13% to $435 million. Fifty-five percent of the 1989 revenue came from affiliates of its parent, General Motors Corp., down from 59% in 1988.

The company entered into multiyear processing agreements with several California thrifts last year, including Beverly Hills-based Great Western, Oakland-based World Savings, First Federal Savings and Loan of San Gabriel, and Palm Springs Savings Bank.

EDS also boosted its financial industry revenue by acquiring the electronic funds transfer network of Automatic Data Processing Inc., and the credit card processing subsidiary of Society Corp., Cleveland.

Other contracts announced last year were with the San Antonio Federal Credit Union; Meritor Savings Bank, Philadelphia; First City Bancorporation of Texas, Houston; and Caixa de Catalunya, a Spanish thrift. □

MasterCard Shift May Change Card Marketing

By YVETTE D. KANTROW

LOS ANGELES — When Alex W. Hart revealed his plans for MasterCard International last week, he did more than plot the direction of the card association. He described what may prove to be a significant change in the way U.S. banks market credit cards.

Mr. Hart, who recently completed his first year as president of New York-based MasterCard, acknowledged that Visa and MasterCard had become too much alike, allowing American Express Co. and Sears, Roebuck and Co. to make inroads in the market.

ANALYSIS: *Follow-up on the news*

He vowed that through new advertising and an updated logo, MasterCard would clearly differentiate itself from Visa U.S.A. Inc.

Mr. Hart conceded that Visa will remain the No. 1 bank card. But MasterCard's goal will change. After a 10-year effort to upgrade what was once viewed as a down-market image, MasterCard now sees its role as the defender of the "bank-card heartland."

Forsaking the Wealthy

The change is significant for an industry that has put a lot of effort into seeking the upscale image associated with American Express. If successful, the shift could result in credit cards being hawked to a new, somewhat neglected market segment.

"The industry does have a little too much of a mind-set that looks to upper-income households," said Stephen Szekely, a vice president of Payment Systems Inc., Tampa, Fla. Considering that the bank card business is based on credit, the emphasis on upscale consumers is ironic, he said.

"If MasterCard carries through with this, issuers will perceive that there is an opportunity there, and offers [for credit cards] will be extended where they aren't now," Mr. Szekely added.

MasterCard's plan, which focuses on building brand identity, appears to confirm speculation among bankers that two distinct card organizations would emerge as a result of Mr. Hart's strategy.

Aiming for 2 Cards of Choice

MasterCard is suggesting a two-pronged attack on nonbank rivals. It will battle Sears' Discover card and American Express' Optima card for the retail-oriented mass market, leaving

Supreme Court Reaffirms Banks' Securitization Power

By BILL ATKINSON

WASHINGTON — A major bank victory over the securities industry was reaffirmed Tuesday when the Supreme Court let stand an appellate court ruling that permits banks to package and sell mortgage loans as securities.

The decision ends the last legal challenge to a 1987 regulatory ruling that punched a big hole in the Glass-Steagall Act, which separates the banking and securities industries.

Banks used that ruling as the basis for packaging an array of consumer loans, not just mortgages, and selling them as securities to investors.

Experts said the Supreme Court action is likely to accelerate that trend, which could be broadened to include the securitization of commercial loans.

Opens Securitization Door

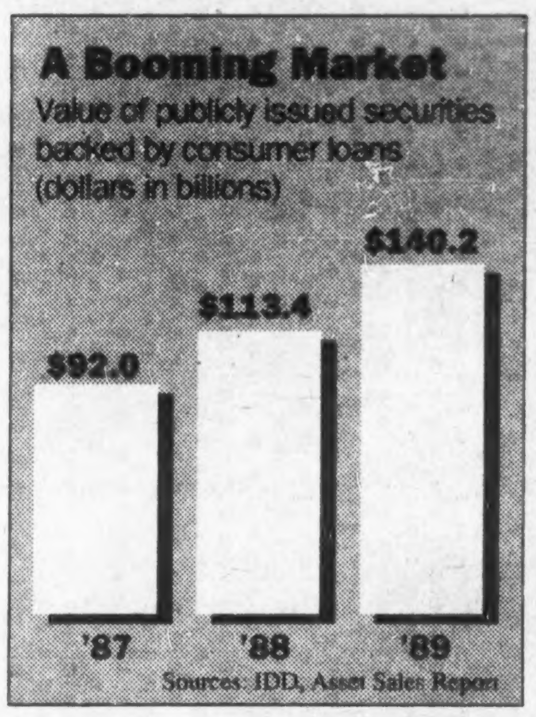
"The lid will come off and banks will begin looking toward other types of asset securitization," said Brian W. Smith, a partner with Stroock & Stroock & Lavan.

"Everyone has been kind of holding their breath to see what would happen. This is one more hole in the Glass-Steagall's wall."

The Supreme Court decision not to hear the appeal confirms that banks can not only sell but also underwrite securities backed by loans that they originated or bought. As a result, they can shed assets without paying fees to investment banks.

A Booming Market

Value of publicly issued securities backed by consumer loans (dollars in billions)



Sources: IDD, Asset Sales Report

The action is a blow to the Securities Industry Association, which sued the Office of the Comptroller of the Currency in 1987 when the regulator permitted Los Angeles-based Security Pacific Corp. to package mortgage loans and sell them as securities to the public.

A federal district court agreed with the association's argument that the bank's actions violated the Glass-Steagall Act. That decision was reversed on appeal in the Second Circuit Court of Appeals in New York.

The Supreme Court's action "has the potential for creating seriously increased risks for federally insured banks and is disappointing because we didn't have our day in court," said a spokesman for the SIA. "The decision shows that banking regulators are being given deference by the courts because of the complexity of the issue."

Bankers and regulators alike applauded the Supreme Court's

ABA Likely To Endorse Plan Allowing Big Failures

By ROBERT TRIGAUX

WASHINGTON — Under a proposal the American Bankers Association is expected to approve next week, big banks would be allowed to fail with the understanding that losses for uninsured depositors and unsecured creditors would be limited to the average cost of bank failures over time.

The ABA's deposit insurance reform committee, which unveiled general recommendations Tuesday, suggests the current system of $100,000 insurance should not be altered to accommodate bank failures.

Instead, the committee said, anyone uninsured or unsecured should face a loss based on a weighted average cost to the government of handling a bank failure over an as yet undetermined number of years.

Losses Could Be Narrow

Historically, that average cost has been about 11 cents on the dollar. That means that under the ABA committee plan, for example, a customer of a failed bank with $1 million on deposit would be compensated fully for the first $100,000, and would receive a "final settlement payment" of 89 cents on every dollar of the remaining $900,000. The actual average cost could

Outlook Brighter For Economy, Greenspan Says

By ROBERT M. GARSSON

WASHINGTON — Indicating that the Federal Reserve is feeling less pressure to ease interest rates, Chairman Alan Greenspan told Congress Tuesday that economic prospects appear to be brightening.

Although it is too early to say for certain that the economic weakness evident in the latter part of 1989 has been put behind the country, "the evidence of recent weeks is more encouraging," Mr. Greenspan said in an appearance before a House Banking subcommittee.

The central bank chairman told the monetary policy subcommittee that the war on inflation is still the Fed's primary goal. "Unfortunately, no progress was made in 1989," he said.

Chemical Names Alan Buckwalter President of Texas Commerce Unit

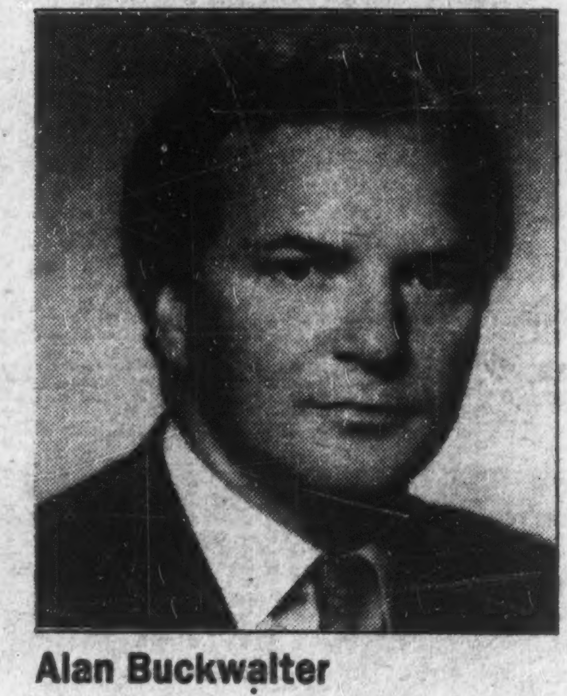
By STEVE KLINKERMAN

DALLAS — Bolstering its presence at its Texas unit, Chemical Banking Corp. on Tuesday named Alan Buckwalter president of Texas Commerce Bancshares' lead bank in Houston.

Mr. Buckwalter, 42, has held a variety of posts in his 20 years at Chemical, including stints as head of the bank's southern commercial banking division and its European corporate lending unit. He most recently served as managing director of Chemical's banking and corporate finance unit.

No Spot at Holding Company

Mr. Buckwalter will become president of Texas Commerce Bank Houston, filling a position that had been vacant for a year. He will not occupy a position at the Texas Commerce holding company.



Alan Buckwalter
Texas Commerce Bancshares

Though Mr. Buckwalter is the second high-level Chemical executive to be transferred to Texas in the past two months, a bank spokesman reiterated that Marc Shapiro is still in charge of Texas Commerce's day-to-day

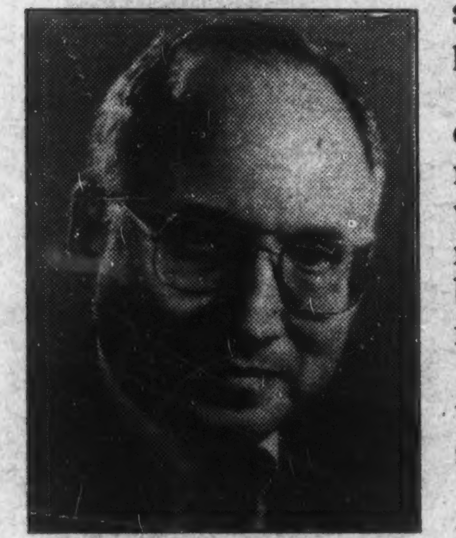
PEOPLE *in the news*

Fleischer Has No Argument With OTS Franklin Seizure

By PHIL ROOSEVELT

Although the federal government has seized Franklin Savings Association, his unorthodox thrift in Ottawa, Kan., Ernest M. Fleischer remains the picture of cool, detached reason.

"I believe the decisions that were reached were carefully thought through," said Franklin's former chairman and majority shareholder. Indeed, he hailed the thrift's entry into Office of Thrift Supervision conservatorship last Friday as "very proper."



Ernest M. Fleischer

Mr. Fleischer's comments came Tuesday even as some outsiders expressed dismay. The $11.4 billion-asset Franklin, which invested mainly in mortgage securities, emerged during the 1980s as a symbol of nontraditional thrift strategy and its potential for stellar profits.

"I still think they did a hell of a job," a top mortgage trader at a Wall Street firm said Tuesday.

Regulators seized Franklin after forcing it to book $119 million in losses from transactions involving financial futures. Franklin, which had used the futures as part of a hedging strategy, planned to take the losses over several years.

The loss threw Franklin out of compliance with capital regulations and, in turn, threatened to trigger a defeasance provision in an outstanding bond issue. That would have cost Franklin $185 million, but the government, as conservator, can void the provision.

Fleischer Plans Challenge of Government's Accounting Stance

Mr. Fleischer said he strongly disagrees with the government-imposed treatment of losses on futures contracts and plans to challenge it. "There are personal reputations on the line," he said, noting that Franklin's accounting approach had been approved by the thrift's inside accountants, outside auditors, and top executives.

But he said the government was wise to impose conservatorship since that can head off losses from the bond issue. "I think they acted very responsibly," he said.

Some press reports have indicated that Franklin may eventually be taken out of conservatorship and given back to its shareholders. That would be a first. Officials of the Resolution Trust Corp. and at the OTS in Topeka, Kan., could not be reached for comment.

Smooth Sailing Forecast for Franklin Under Conservatorship

Meanwhile, the unflappable Mr. Fleischer said he sees a smooth future for Franklin in conservatorship, though he has been ejected.

"I can't imagine how anything horribly adverse could happen," he said. The RTC has retained Lewis Ranieri, a legend in mortgage securities, as an adviser, he noted. Other Franklin executives and employees will retain their jobs under an RTC managing agent.

"I have contended for a long time that Franklin is not a one-man show," Mr. Fleischer said. "I've received a lot of credit for efforts that others carried out very well. This may end up satisfying the financial community that Franklin can run well without me." ☐

NEWS *briefs*

Mercury Savings Reduces Staff 10% After Asset Cut

HUNTINGTON BEACH, Calif. — Mercury Savings and Loan Association said it is cutting its staff 10% immediately to correspond with planned reductions in the thrift's function and assets.

In the past 12 months, assets have declined 20%, to about $2 billion. The personnel cutbacks primarily affect lending operations.

As part of the staff cuts, Ronald Hansen has resigned as chief financial officer. His post will be assumed temporarily by the chief operating officer.

Northern Trust Directors Declare 2-for-1 Stock Split

CHICAGO — Northern Trust Corp. said its board declared a two-for-one stock split. The amendment would double the number of authorized shares to 70 million.

The action requires shareholder approval of proposed amendments to its incorporation certificate.

Fannie Mae Finance Chief Resigns in Consolidation

NEW YORK — The Federal National Mortgage Association said Tuesday that Bruce C. McMillen had resigned as chief financial officer amid a consolidation of the agency's financial-management functions.

Fannie Mae said that Timothy Howard, formerly executive vice president of asset management, would take on Mr. Millen's responsibilities in addition to his own. He will be executive vice president as well as chief financial officer.

Mr. Howard will now be responsible for all financial activities, including asset and liability management, financial planning, investor relations, and efforts at raising housing capital in domestic and international market.

Harris Delays Takeover in Suburbs

Chicago Bank Says It Must Meet Added Regulations

By NANINE ALEXANDER

CHICAGO — Harris Bankcorp of Chicago said Tuesday that it had withdrawn an application to acquire Frankfort Bancshares Inc. in the Chicago suburbs "in order to meet additional regulatory requirements."

Harris agreed in August 1989 to acquire Frankfort for $15.5 million in cash. It plans to refile the application when the requirements have been met and expects to be able to complete the deal this year.

The brief announcement was apparently prompted by an article in *Crain's Chicago Business* on Monday. It quoted unnamed industry sources as saying that the Federal Reserve Bank of Chicago had found that Harris was not living up to requirements under the federal Community Reinvestment Act.

Speculation by *Crain's* that regulators might be using CRA to prod banks into offering more low-cost banking services to consumers was denied by Frank Dreyer, senior vice president of the Chicago Fed.

Last February, the Fed rejected a bid by Continental Bank Corp. to acquire a $14 billion-asset Arizona bank. Fed governor Wayne Angell persuaded the board to vote against Continental because it was taking so long to return the bank-holding company to private ownership.

At the time, however, Mr. Angell said Continental's record on community reinvestment may have been enough to reject the application. Last July, Leader Federal Savings and Loan Association of Memphis, was denied an application to open a branch by the Federal Home Loan Bank Board because its record on community lending did not pass muster.

Community reinvestment activists said they were surprised by the *Crain's* article.

Bruce Gottschall, executive director of the Neighborhood Housing Services of Chicago, a nonprofit organization that helps low- and moderate-income individuals buy and rehabilitate one-to-four-family homes, described Harris as one of the banks that had been making an effort that went to the spirit of CRA.

"If Harris can't get past the regulators, then I don't know who can," said Mr. Gottschall. ☐

End of Coal Strike Halts 2 Bank Boycotts

By CURTIS SIMMONS

NEW YORK — In declaring the end Tuesday of a bitter 10-month dispute with the Pittston Coal Group, the United Mine Workers of America also lifted boycotts against two banks through which it had hoped to gain negotiating leverage.

The banks – Manufacturers Hanover Trust Co., New York, and Crestar Bank, Richmond – faced protests ranging from picket lines to petitions challenging their lending records under the Community Reinvestment Act.

Pressure in Boston

Also as part of the contract dispute, the miners union took a tough stance against Shawmut Bank, Boston. The union pressured the Boston City Council and Mayor Raymond Flynn to remove $20 million in city deposits from the Shawmut Corp. subsidiary. William Craig, a bank vice chairman, was a Pittston Co. director and, the union said, failed to respond to requests to mediate the strike.

Mr. Craig resigned from the bank last October to begin a second career as an investment adviser. Retaining his seat on the Pittston board, he denied the union had forced his move, but the miners claimed victory.

Effort to Block Purchase

The UMW then went after Manufacturers Hanover, a participant in a $100 million Pittston credit facility. The union tried to stop the bank from buying $1.2 billion in deposits from Goldome, a failing upstate New York savings bank, because of alleged Community Reinvestment Act violations in Brooklyn, N.Y.

The CRA complaint delayed the deal's completion, but a Federal Reserve Board ruling vindicated Manufacturers Hanover.

For Crestar, another Pittston creditor, the strike was a public-relations nightmare. Union members picketed the bank, and the local press gave the protests extensive coverage. Cheryl Jenkins, a Crestar spokeswoman, said the bank had no large commitment to Pittston but refused to sever the relationship.

Nearly 2,000 UMW members in Kentucky, Virginia, and West Virginia voted 63%-to-37% Monday to accept a Pittston contract offer. ☐

Correction

A item in the Feb. 15 News Briefs feature ("BFS Bancorp Sues Suitor, Alleging Legal Violations," page 2) incorrectly named the city in which the company is based. The company is based in New York City.

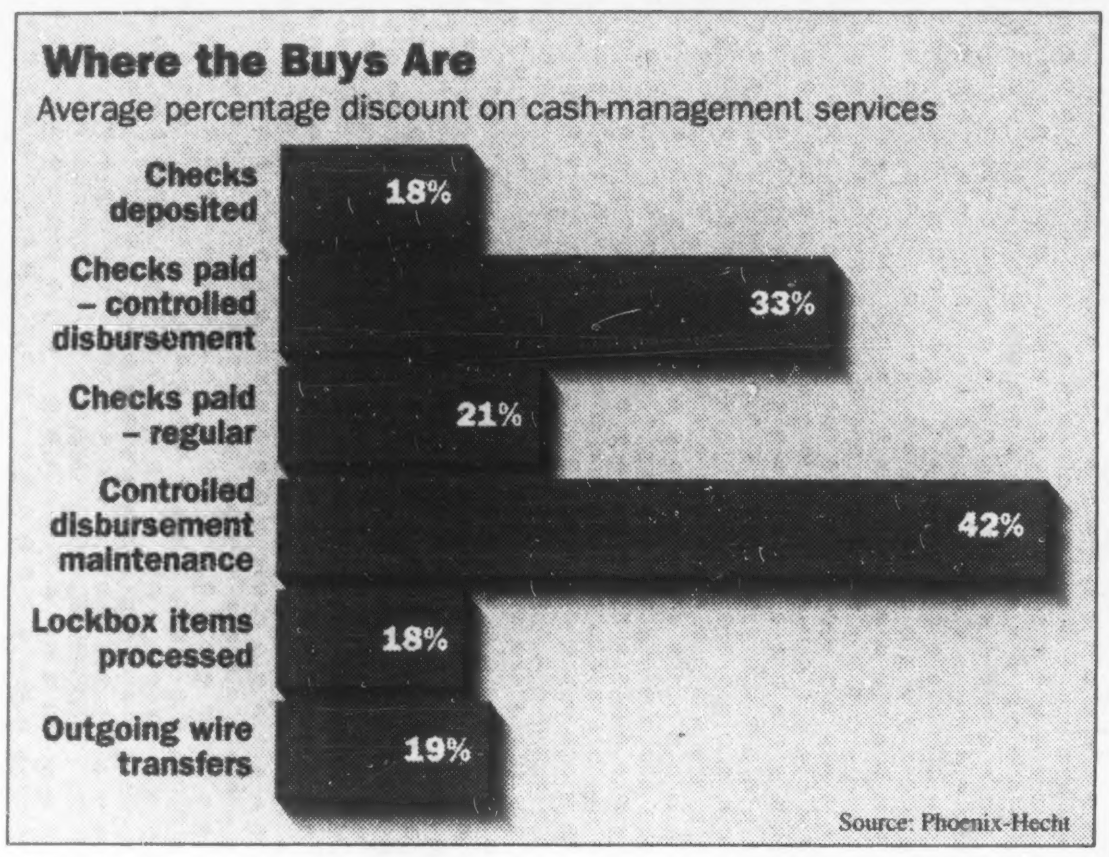
Cash Management: Buyers' Market

Survey Finds Mounting Competition Among Banks

By RICHARD LAYNE



Where the Buys Are

Average percentage discount on cash-management services

Source: Phoenix-Hecht

NEW YORK — Banks charged only slightly more for cash management services in 1989 than the previous year, but corporate customers continue to seek contracts based primarily on services rather than on prices, said Phoenix-Hecht, a consulting company.

In its annual survey of 586 corporations that use cash management services, Phoenix-Hecht found that the overall cost of those services rose 5% in 1989. That increase was about in line with general inflation. Bankers predicted a similar, if not smaller, increase in 1990.

The study is published in the 1990 edition of Phoenix-Hecht's "Blue Book of Bank Prices." It found that bankers offer discounts on only 10% of their services, a smaller percentage than many of their peers assumed, the consulting firm said. The average discount price was 27% in 1989, virtually the same as the previous year's 28%. Just as in 1988, banks in the Southeast – where competition is especially fierce – offered the steepest discounts in 1989.

Competition Keeps Prices Down

As corporations reduce the number of cash management banks they use, competition among the 200 major service providers is increasing. Those factors are expected to keep the price down.

"I think you may see a tendency to follow inflation, but I don't see any big increase coming," said John N. Fix, senior vice president at Continental Bank, Chicago.

"Prices will only go up incrementally because of the competition," said David Kurrash, vice president of Wells Fargo & Co., San Francisco.

Mr. Kurrash said that the small rise in price does not endanger banks' profit margins. Additional automation in disbursement and funds transfer can reduce operating costs, which in turn can be passed to the customer.

Service Outranks Price

While corporations exert pressure on banks to cut prices, cost is not a primary consideration in choosing a cash management bank.

"The service issues always rank higher than price any time we do a survey," said George B. Rush, vice president of Phoenix-Hecht in Research Triangle Park, N.C.

Bankers said they are encouraging that nonprice focus. "There is a major effort among banks to focus more attention on quality and value of product delivery than on offering lowest prices possible," Mr. Kurrash said.

Even middle-market corporations, a frequent target of bankers' wholesale marketing efforts, demand sophisticated service, although perhaps not the same levels of sophistication needed by big corporations with much larger cash positions.

Intense competition among the 20 top service providers has already escalated price wars, said Mr. Rush. Among these cash management elite, bank are forced to compete on price because service levels rarely vary for account reconciliation and controlled disbursement. Corporate customers benefit from discounting of these services, which can be as low as 33% below list. "There's pressure for discounting," Mr. Fix said.

Phoenix-Hecht's study found that the most frequently discounted services are the per-item charges associated with lockbox, disbursements, checks deposited, and automated clearing house debits. Wire transfer services are the least often discounted. Banks are more concerned with security issues surrounding funds transfer than with price, Mr. Rush said. ☐

CoreStates Expands EDI

By RICHARD LAYNE

NEW YORK — As part of a plan to expand the use of financial electronic data interchange among corporations, CoreStates Financial Corp. will now allow cash management customers to pay for banking services via electronic funds transfer.

Through a banking subsidiary, Philadelphia National Bank, customers can settle invoices by sending a payment and the related invoice number directly to the bank through the automated clearing house network. Banks refer to such transactions as financial electronic data interchange.

Thomas Gregory, assistant vice president at CoreStates, said the bank already performs this service for five cash management customers. Now the service will be standardized on a transaction format approved by the clearing house network.

Mr. Gregory said that he expects as many as 75 companies to use this financial service, which also provides a chance for the bank to streamline its accounts receivable process. CoreStates is one of perhaps 50 banks that originate and receive financial EDI transactions of any volume. Those banks view financial EDI as a critical aspect of cash management services.

A Last Step

For more than a decade, corporations have used electronic data interchange to transmit invoices, purchase orders, and other trade documents. Financial EDI, which closes the trading loop, is typically the last step for a corporation that already uses EDI.

CoreStates customers that elect the financial EDI program will transmit payment under a widely accepted clearing house format, CCD, which virtually all large corporations use to originate electronic payments. ☐

Sears Unit in Processing Pact

By KAREN GULLO

NEW YORK — Sears Payment Systems Inc. has begun processing a private-label credit card for the jewelry and home electronics division of Fred Meyer Inc.

As part of its service, Sears is acquiring $5 million in receivables from the Portland, Ore., retailing company. The Sears unit will provide new-account processing, sales authorizations, statement processing, cardholder services, remittance processing, collections, and credit marketing for Fred Meyer.

Sears Payment Systems, a member of the Dean Witter Financial Services Group of Sears, Roebuck and Co., will also provide electronic authorization and draft capture services for Visa, MasterCard, American Express, and Discover card transactions.

Seattle-First National Bank had been providing a private-label credit card program for Fred Meyer's jewelry division since 1982. The company decided to switch providers because it wanted more flexibility in application approvals.

The bank, a subsidiary of Seafirst Corp., "was running the program like a Visa or MasterCard program, so there were stringent restrictions on approvals," said Michael Don, vice president in the treasury department. "We wanted to become more aggressive in our private-label program and needed more flexibility."

Mr. Don said the company chose Sears because its fee structure provides for shared liability on credit losses. ☐

COMMENT/ *By Thomas "Lud" Ashley*

Bush Signals Broad Changes In Financial Industry Rules

Twice during a recent week the Bush White House sent strong signals of the shifts in financial regulation it will propose later this year. One dealt largely with deposit insurance reform, the other with the need to restructure the financial services industry.

In the budget submitted to Congress two weeks ago by Budget Director Richard G. Darman, the fiscal condition of the depository institution trust funds received top-level attention for the first time in the history of the annual budgetary process. It also provided the first official indication of the approach the Bush administration is likely to take in reshaping the federal deposit insurance system.

Noting that the face value of all deposit insurance programs is more than $3 trillion, and that future claims are virtually certain to be in the tens of billions of dollars, Mr. Darman said priority must be given to the proper scope of federal insurance, how the costs of these programs should be shared, and how best to manage and control the government's potential liability for losses.

One of the problems, in Mr. Darman's view, is that, contrary to basic principles of insurance, federal deposit insurance premiums do not vary with the known level of insured risk; all institutions pay the same fixed percentage of deposits. The result has been that healthy, prudently managed firms subsidize those that take more risk.

Compounding this problem, says Mr. Darman, large institutions receive greater protection against failure than small ones while paying premiums on a smaller proportion of their liabilities. The too-big-to-fail practice indirectly extends guarantees to deposits over $100,000 and to other creditors. Large banks allegedly pay lower effective premiums because insured deposits are a small share of their funds.

The effective extension of insurance coverage to deposits over $100,000 and uninsured creditors arguably decreases the incentive of insured parties to monitor risk-taking, allowing depository institutions to take more risk and increasing the insurance funds' exposure to loss.

Mr. Darman believes a good case can be made for redistributing the potential cost of failures so that the owners and unsecured creditors will be at greater risk. Federal insurance should be priced (through a combination of premiums and capital requirements) in a manner that reflects all sources of risk, prospective as well as current. In addition, the facts about an institution's financial condition should be made clear to depositors, creditors, and stockholders so that the market may impose penalties on poor performance.

Lowering Government Costs

Mr. Darman thinks it may be possible to achieve the goals of deposit insurance at reduced cost by lowering the government's level of exposure to losses. Thus it may be desirable to require some depositors to share some portion of the losses through deductibles or similar features that are standard with most private insurance.

Taking a page from FDIC Chairman William Seidman, Mr. Darman points out that the government's liability for losses also could be limited by narrowing either the range of investments funded by insured deposits or the types of depositors and creditors protected.

Other reforms endorsed by the budget director include risk-based capital standards, risk-based pricing of insurance, market-value accounting, and removing regulatory barriers to asset and geographic diversification, product and services integration, and innovation.

> **'The administration is convinced that a broad restructuring must include deposit insurance reforms.'**

The second message from the White House, contained in the "Economic Report of the President," emphasizes the need to consider deposit insurance reform in a broader context that provides a fundamental reassessment of financial policy, that is, "one that is grounded in the sound logic of encouraging efficient, focused competition among financial institutions."

Echoing Mr. Darman, the report points out that the current deposit insurance system has encouraged excessive risk-taking. It suggests that the recent deterioration of credit quality may actually be systemic and not reflect one-time shocks or problems in specific sectors or geographic regions.

Risk-based capital is endorsed by the White House as a "step in the right direction" in maintaining a level regulatory playing field across different countries, a policy goal it sees as becoming increasingly crucial as cross-border investment in financial services continues. It also shares the Darman views that risk-based insurance would further enhance the incentives to banks with respect to choice of investments and that improvements in the quality of information available to regulators – perhaps through market-value accounting techniques – could lead to better risk measurement.

But Mr. Bush's economic report makes clear that crucial to preserving the fundamental soundness of the financial system is the ability of the system itself to adapt efficiently to competitive challenges from other providers of financial services, both foreign and domestic.

A guiding principle for financial regulation, the White House believes, is that rules should be applied consistently across all types of institutions undertaking the same activities. At the same time, there can be different rules for different activities, with financial institutions permitted to opt for those rules that best fit their competitive strengths.

While they stop short of offering a definitive plan, Mr. Darman's budget documents and Mr. Bush's economic report make it clear that the administration attaches great importance to a broad restructuring of the financial services industry that puts in place policies that enhance rather than constrain the ability of financial institutions to adapt to the constant changes of a competitive marketplace.

It is also clear that the administration is convinced that this broad restructuring must include deposit insurance reforms that protect taxpayers by relying less on regulatory discipline and more on the self-discipline that risk-based capital and insurance premiums impose.

In short, the administration is looking to the most far-reaching overhaul of the financial system since the 1930s, and the suggestion is strong that it will accept nothing less. ☐

Mr. Ashley is president of the Association of Bank Holding Companies.

GRAPEVINE/ *By Jed Horowitz*

Bankers Rip RTC Thrifts. William Roelle, the Resolution Trust Corp.'s director of operations, got an earful when he met two weeks ago with a delegation from the Western Independent Bankers, which represents community banks in nine states. The bankers accused RTC-owned thrifts of offering above-market interest rates – the very "Texas premium" the thrift-bailout law was supposed to eliminate.

Sources said Elden Barmore, chief executive of the Rio Salado Bank in Tempe, Ariz., waved advertisements from RTC-owned thrifts that offered 12-month certificate of deposits yielding 8.78% and 8.88%. Mr. Barmore said his bank, which was paying 7.44% on its CDs, lost $3 million to $5 million to the government-run competition.

"I will not apologize for above-market rates," Mr. Roelle replied, according to two separate accounts. The RTC has no alternative way of raising funds for some of the sick thrifts it has acquired, he told the bankers. Mr. Roelle was not available for comment.

— Sam Zuckerman

* * *

RTC Rips Competitors. The Resolution Trust Corp. is also taking a harder line with publishers and other conference organizers who offer expensive seminars on coping with, or profiting from, the thrift crisis.

Starting in early April, the agency will launch its own 10-city series of conferences at a bargain price. Rather than the usual $500 to $1,000 fees charged by their rivals for two-day conferences – including the *American Banker* – the RTC's one-day meeting will cost $220 or $250, according to executive director David C. Cooke. "We want to be able to reach not only the people with deep pockets, but the little guy too," said spokesman Stephen Katsanos. The seminars will feature a general session in the morning and afternoon sessions on thrift acquisitions and asset sales.

There's one more dart for competitors. Seminar sponsors usually pepper their speakers' list with lots of RTC officials. Mr. Cooke says he and his deputies are likely to save their future speech-making for the agency's own conferences.

— Barbara A. Rehm

Group Opens Leasing Shop. Five officials of Bankers Trust Co.'s leveraged leasing unit, including two managing directors, recently left to form their own boutique.

A source outside the bank said Lee Rigney, Anthony Zauner, and three colleagues threatened to leave unless they were allowed to spin off the unit in a buyout.

A Bankers Trust spokesman confirmed the departure of the five employees, but would not elaborate. He also noted that the unit's core managers are still in place.

The unit, which leases big-ticket items such as aircraft, has 25 professionals and is headed by Charles Hill and two other managing directors, Sharon Peterson and C. Wesley Reynolds.

Neither they nor the employees who left were available to comment.

Undermanning Marine. Spokesmen at Marine Midland Banks refuse to put a number on the extent of layoffs triggered by the company's radical change in strategy. However, headhunters and some internal sources said they expect 2,000 to 3,000 people to be cut from the company's payroll of 13,800 within the next six months – most of them in Manhattan.

The Buffalo-based company, owned by HongKong and Shanghai Banking Corp., is pulling back on ambitions to be a superregional merchant banking/corporate finance power. "We are certainly looking at moving toward more of a Buffalo orientation," a spokesman in New York said.

A source from the merchant banking area said a team has been formed to spin off various units in whole or in part, including leveraged finance, sales and syndications, and communications and media lending. Those on the team have been offered handsome severance packages, the source said, with bigger payouts if they stay the course until the end.

Supreme Court Reaffirms Banks' Securitization Power

Continued from *page* **1**

action.

"It is quite big decision. SIA is always a hard fight," said L. Robert Griffin, director of the litigation division at the Comptroller's office.

Robert Tortoriello, an attorney representing Security Pacific, said the decision backs up the Comptroller's liberal interpretation of what banks are allowed to do.

"It confirms the Office of the Comptroller's view of the way the 'business of banking' can be defined," he said. "It is an important affirmation."

Mr. Tortoriello said that prior to the original case, a number of banks were active in originating mortgage loans, packaging and selling them to the public. Shortly after the decision many banks pulled out of the business and waited for the court to settle the matter. Now, Mr. Tortoriello sees more banks coming back into the market.

The action is a blow to the Securities Industry Association.

The market for securities backed by mortgage and consumer loans is growing rapidly. It stood at $140.2 billion last year, up 24% from 1988. Those totals consist of securities issued by both commercial and investment banks. ☐

Banking Coverage Where It Counts
WASHINGTON MONDAY
Every Week in AMERICAN BANKER

Deluxe to Raise Prices On Printed Products

ST. PAUL — Deluxe Corp., the nation's largest check-printing company, said it will increase prices beginning April 16 to compensate for rising manufacturing costs.

The St. Paul-based company said it will raise prices on virtually all checks, business forms, and other printed items. It said the increases will average 4.75%. ☐

Economic Outlook Brighter, Greenspan Says

Continued from *page* **1**

On other subjects, Mr. Greenspan also told the committee that:

- The commercial banking industry's year-long experience in underwriting corporate debt has produced "nothing negative," a signal that final approval to underwrite corporate stocks is likely to follow soon.
- The pace of activity at the Resolution Trust Corp. should pick up significantly in the coming months. However, he conceded that if it does not, Congress may have to take a second look at the bailout law passed last year.
- The Federal Reserve never considered bailing out Drexel Burnham Lambert Group Inc. The government has bailed out specific institutions too frequently in the past, he said.

Impact on Treasury Market

Mr. Greenspan's bullish remarks on the economy drove down U.S. Treasury securities. The 8½% 30-year bond went into a tailspin and was down two points by midday, at 98-17/32, to yield 8.64% versus 8.47% on Friday.

Given the Fed's apparent concern about inflation prospects, "It's very clear that they will be willing to tolerate some weak [growth] numbers," said Robert A. Brusca, chief economist for Nikko Securities Co. International.

A number of Fed governors have complained that 4.5% inflation is too high, yet the "central tendency" of expectations within the Federal Reserve System is for price level increases of 4% to 4.5%, Mr. Brusca noted.

"So if you were going to make a bet, the probability is that the likelihood of tightening is much greater than the likelihood of easing," he said, adding that it is possible the Fed will push rates up "very soon."

'The likelihood of tightening is much greater than the likelihood of easing.'

Robert A. Brusca
Nikko Securities Co.

Stable Fed Funds Rate Seen

The central bank is likely to continue holding the federal funds rate at 8¼%, said Stuart G. Hoffman, vice president and senior economist for PNC Financial Corp., Pittsburgh.

"There's no question he is expressing the view that the risk of inflation is greater than the risk of recession," Mr. Hoffman said.

Kathleen Stephansen, vice president and senior economist for Donaldson, Lufkin & Jenrette, said Mr. Greenspan was putting a much more optimistic interpretation on economic indicators than other economists.

"We view them as indicating a slowdown not associated with a recession," she said. "The Fed seems to look upon them as indicating a rebound."

However, Ms. Stephansen said she believes the Fed is taking a "wait-and-see" attitude toward the economy, and is not likely to move without more evidence of the direction of the economy.

"It's typical of the Greenspan Fed," she said. "They react to events," and attempt to engage in fine-tuning of the economy."

Risk Factors Cited

Mr. Greenspan told the House subcommittee that while the Fed is projecting moderate economic growth of 1.75% to 2%, but said there are a number of risks to that forecast.

Chief among them is the increase in leverage, he said, arguing that the structure of the economy's financial balance sheet weighs increasingly heavy on the dynamics of economic expansion," he said.

"In recent years, business debt burdens have been enlarged through corporate restructuring, and as a consequence interest costs as a percent of cash flow has risen markedly," he said.

Banks and other lenders have begun tightening their credit standards, he said, especially for merger and leveraged buyout loans, "as well as for some other business customers."

Debt-servicing burdens have increased for consumers too, and "suppliers of consumer and mortgage credit appear to have tightened lending terms a little," he said.

Mr. Greenspan said it is unlikely that such strains would in themselves precipitate an economic downturn. Debt growth for nonfinancial firms should continue to slow, he said, a trend that should lessen the threat to the economy. ☐

Speed or Haste? Pace at the OTS Causes Concern

By ROBERT M. GARSSON

WASHINGTON — After a rash of thrift closings last week, close observers of the savings and loan industry have begun to ask if the Office of Thrift Supervision is cracking down too hard and too quickly on institutions that might have turned around.

"The OTS can solve its problems most easily by turning shops over to the the Resolution Trust Corp.," said Richard T. Pratt, chairman of Merrill Lynch Mortgage Capital Inc., a subsidiary of Merrill Lynch & Co. "A lot of people are wondering if they are being too tough now," after having been accused frequently of being too lenient in the past, he added.

ANALYSIS: *Follow-up on the news*

Efforts to obtain comment from the OTS Monday were unsuccessful.

The pace of failures has already begun to strain the RTC's resources, particularly its ability to find qualified managers to oversee conservatorships.

The closing on Friday of Imperial Savings Association of San Diego and Mercury Savings and Loan Association of Huntington Beach, Calif., shows the scope of the problem facing regulators.

One the one hand, Imperial had diversified broadly into new activities allowed during the permissive regulatory environment of the 1980s. But Mercury was a more traditional thrift operating in a favorable economic environment.

Emphasis Is Right

Mercury was invested in the kinds of housing-related assets that the 1989 bailout law requires all thrifts to emphasize, said Patrick Forte, president of the Association of Thrift Holding Companies.

If the OTS seizes thrifts too quickly, it could increase the cost of the bailout needlessly. The market automatically discounts assets of seized thrifts. As a result, seizing a thrift that would have survived on its own raises the government's cost.

The Bush administration is monitoring the OTS activity closely, and the Resolution Trust Corp. has tried to head off potential "dumping" problems by gently cautioning the OTS that it must be prepared to back up its decisions.

Acceptance Required

The RTC is required to accept institutions that have been declared insolvent and placed in receivership. However, it need

Foreign Banks Still Seizing Greater U.S. Market Share

By JAMES R. KRAUS

NEW YORK — Though U.S. banks have decided that bigger is not necessarily better, foreign banks are continuing to increase their asset holdings here at a rapid pace, an *American Banker* survey found.

Foreign banks' U.S. assets surged 9% in the year ended last June 30, more than twice the growth at U.S. banks, according to the annual survey of foreign bank activity in this country.

As a result, foreign banks increased their market share of U.S. banking assets by almost a full percentage point, to 22.6%.

Foreign banks hold an even bigger share of a key component of U.S. banking assets – commercial and industrial loans. An 8.9% growth rate increased those holdings to 28.5% of the U.S. market, up from 27.5% a year earlier. (Tables with the survey results begin on page 17A).

And for the first time, the survey found, the U.S. holdings of a foreign bank – Bank of Tokyo – would rank it among the nation's top 15 bank holding companies.

Moves by foreign banks to boost their assets stand in sharp contrast to the strategy of U.S. banks. Whereas assets once determined the clout and prestige of U.S. banks, today's deregulated and capital-hungry environment puts more emphasis on capital strength, profitability, and productivity.

But the foreign banks – particularly the Japanese – have a different agenda, U.S. banking experts said. Better capitalized foreign banks with profitable home bases have found it easier than U.S. banks to keep adding low-margin assets. Foreign banks also see bigger assets here as the first step toward develop-

Banks Lose Fight With Credit Unions In Colorado

By ELLEN MEMMELAAR

Bankers in Colorado lost a legislative showdown with credit unions last week in the first of an anticipated series of attempts by bankers across the country to put operating restrictions on credit unions.

The Colorado proposal, known as Bill 1245, would have prohibited credit unions in the state from receiving subsidies from the state and local governments. A committee approved the measure in a vote earlier this month, but the bill was defeated Friday by the House of Representatives in a voice vote.

The Colorado Bankers Association, which helped draft the legislation, regarded it as a first salvo in a campaign to remove what it views as credit unions' competitive advantages.

Nationwide Drive

A banking industry victory in Colorado would have encouraged bank lobbyists in other states as well as the American Bankers Association in their anti-credit-union campaigns. The ABA is spearheading a nationwide drive to eliminate credit unions' tax-exempt status.

Showing the kind of strength that credit unions hope to gather against the ABA effort, hundreds of Colorado credit union members mailed letters to legis-

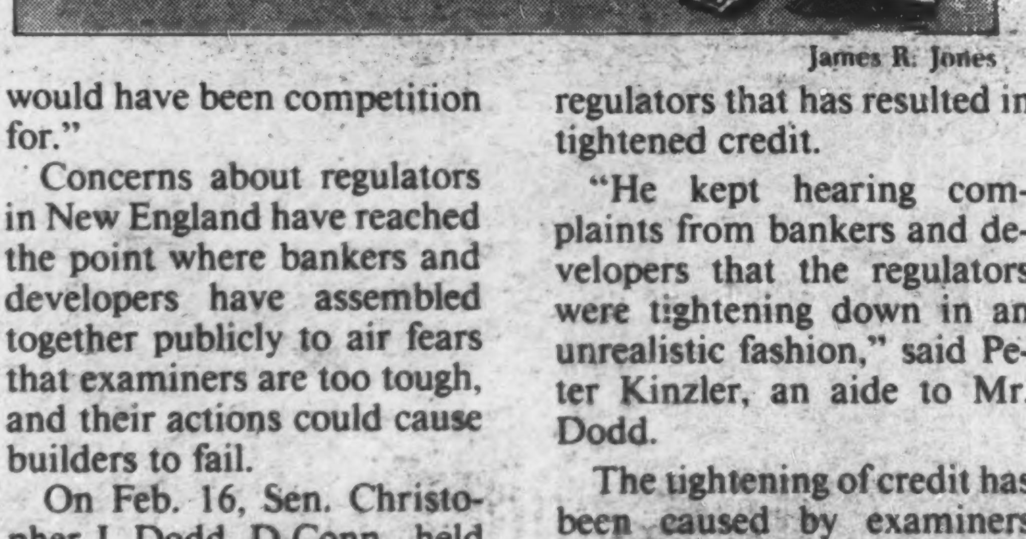
Credit Dries Up as Examiners Go North

By BILL ATKINSON

WASHINGTON — The swarm of federal bank examiners cracking down on lending practices at many of New England's largest banks is rapidly creating a credit crunch in the real estate business that may soon extend to other sectors, say regional bankers, consultants, and developers.

Some banks, yet to be examined, are even second-guessing regulators by tightening credit on real estate projects.

"We have a real liquidity crisis in New England, the likes of which I haven't seen in 20 years," said George J. Fantini, a former banker and now senior vice president of the Boston Financial Group, a consulting firm. "There are projects being rejected today by the banking community that two years ago there would have been competition for."



James R. Jones

Concerns about regulators in New England have reached the point where bankers and developers have assembled together publicly to air fears that examiners are too tough, and their actions could cause builders to fail.

On Feb. 16, Sen. Christopher J. Dodd, D-Conn., held a meeting in Wethersfield, where more than 30 developers and bankers discussed concerns about pressure from regulators that has resulted in tightened credit.

"He kept hearing complaints from bankers and developers that the regulators were tightening down in an unrealistic fashion," said Peter Kinzler, an aide to Mr. Dodd.

The tightening of credit has been caused by examiners taking a harder look at real estate portfolios. In some cases, examiners have listed per-

PEOPLE *in the news*

Lawrence Fish May Head His Former Rival in Boston

Insiders at Bank of New England Corp. said that Lawrence K. Fish, who spent most of his career at the rival Bank of Boston, will be named chairman and chief executive of the troubled company later this week.

Mr. Fish, who could not be reached for comment, has been rumored to be in contention for the job ever since Walter Connolly Jr. was ousted from the chairman's post last month.

If the reports are true, Mr. Fish, 45, would be jumping out of a junk-bond frying pan on the West Coast – where he most recently was president of Columbia Savings & Loan Association – into a fire of massive proportions in trying to revive the ailing East Coast bank.

The other chief candidate for the chairman's job was H. Ridgely Bullock, an outside director of the bank company who is serving as acting chairman and coordinating its ambitious asset-sale program.

Mr. Fish rose quickly during his 16-year tour at the Bank of Boston, which he joined in 1970 as a bank officer in Brazil after serving two years as an aid officer for the U.S. Agency for International Development. In the mid-1970s, he was sent to Japan, first managing the bank's Tokyo operations and eventually heading the entire Pacific Asia division and its trust operations in Hong Kong.

Mr. Fish, who was born and raised in the Midwest, returned to the United States in the limelight when Bank of Boston appointed him to head its retail and middle-market operations in New England in 1984. In 1988, he was appointed to the bank company's board, the only line manager apart from the bank's president to serve as a director, according to a former colleague.

He left unexpectedly in March 1988 to become president and chief operating officer of Columbia, a Beverly Hills thrift that was a major investor in bonds underwritten by Drexel Burnham Lambert. The company was in the throes of a massive restructuring following a two-year investigation by the Securities and Exchange Commission. Mr. Fish resigned from Columbia 17 months later, saying he had completed his job of refocusing the thrift on more traditional activities.

"I think Larry's comfortable with risk and has the self-confidence to be a risk taker," said Wendy Peter Abt, a former head of strategic planning and asset sales syndication at Bank of Boston. "He's terribly bright, and he understands a whole bank and how it operates."

Ms. Abt said Mr. Fish made some tough decisions as head of retail, such as persuading management to cut back its vast automated teller machine network and expand into new areas such as auto leasing. "He's not a one-product manager," she said. "And he understands interest-rate risk and treasury quite well."

Mr. Fish and his Japanese-born wife, Atsuko, have three children. He received a bachelor's from Drake University in 1966 and an MBA from Harvard in 1968. ☐

Economists Foresee No Recession In Next Three Years, Survey Says

By ROBERT TRIGAUX

WASHINGTON — A majority of U.S. business economists in a recent survey say the economy will avoid a recession over the next three years, but at the same time they see little progress by the Federal Reserve on reducing inflation, according to the National Association of Business Economists.

Largely unperturbed by rising foreign interest rates or prospects of slowing growth here, economists surveyed said the 1990 U.S. economy should grow, albeit sluggishly, with real gross national product increasing 1.7%. In 1991, the survey noted, economists said growth would pick up to 2.5%. Results of the association's survey of 65 business economists were discussed at a press conference here on Monday.

As far as the fight against inflation, the survey results show few economists expect the Fed to be effective in cutting the rate of inflation this year or next to below the current 4% level. "This pattern would surely be disappointing to the Fed," the association concluded. In general, however, 72% of the business economists surveyed praised the Fed's actions of balancing inflation and economic growth.

The survey shows forecasters see little movement in interest rates through 1991, and they cite the recent rise as temporary. Rates of 30-year Treasury bonds range in the narrow band of 8.2% in the first quarter of 1990 to 8.0% at the end of 1991.

Internationally, there are questions about whether the world supply of capital is sufficient to rebuild Eastern Europe's capital without marked increases in interest rates, said association president James F. Smith, finance professor at the University of North Carolina in Chapel Hill.

He said most economists think the capital base does exist, but that in the interim the international markets will be testing that premise. "We will probably see more foreign investment in Eastern Europe and less in the U.S.," Mr. Smith said, but he argued there would be little effect on U.S. interest rates. Further, he said the fall in market value in Japan, as well as the capital demands here of the Resolution Trust Corp. to liquidate insolvent thrifts, will have a negligible impact on interest rates ☐

Harris Bank Confirms Layoff Plans

By NANINE ALEXANDER

CHICAGO — Harris Bankcorp., saying it wants to lift its return on equity to 15%, on Monday confirmed a report in a Chicago newspaper that it is planning substantial layoffs to take effect July 1.

Mary Ullrich, a spokeswoman for the company, said that over the next six weeks Harris will decide on a target number. She stressed that the company is not seeking to eliminate a specific number of jobs. The bank has about 5,000 employees.

Hopes to Double U.S. Earnings

The institution has $12 billion in assets and is a Bank of Montreal subsidiary. In recent weeks, Bank of Montreal has said it expects greater results from its U.S. holdings and hopes to double earnings from them.

For 1989, Harris reported that a $50 million provision for lesser-developed-country debt reduced net income 42%, to $52.3 million, or $7.84 a share. The bank's return on equity and assets are considered poor for its size. Ms. Ullrich said 1989 ROE was about 12.5%. ROA was 0.63% as of June 30.

A Chicago Decision

Ms. Ullrich denied any suggestion that the cost-cutting was ordered from Montreal, and she reaffirmed statements by B. Kenneth West, chairman and chief executive of Harris, that the decision to cut the payroll was made in Chicago.

In the report in Saturday's *Chicago Tribune,* Mr. West was quoted as saying that in terms of industry expense levels, Harris' costs are high. Payroll expenses of $238.7 million accounted for about 54% of noninterest expenses of $438.2 million. ☐

Wall Asked to Delay Exit As Replacement Hits Snag

By BARBARA A. REHM

WASHINGTON — The Treasury Department has asked M. Danny Wall, the resigning Office of Thrift Supervision director, to delay his departure while legal questions about appointing an acting director are cleared up, according to agency and industry sources.

Mr. Wall, who announced almost three months ago that he was resigning, wants out now – before he has to take another beating in hearings on Capitol Hill. The next OTS-related hearings are set to start March 14.

Last week, word got out that Treasury was ready to replace Mr. Wall with an acting director. The choice: Jonathan L. Fiechter, senior deputy director for supervision policy at the thrift office.

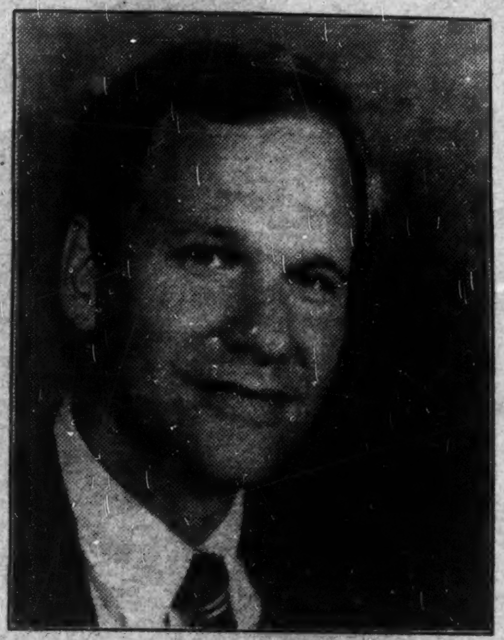
But a Feb. 23 letter to President Bush from U.S. League of Savings Institutions president Frederick L. Webber questions whether the law that dictates OTS's operation, the Home Owners Loan Act, allows for an acting director.

If the law does not vest the proper authority to an acting director, as the U.S. League's lawyers believe, Mr. Webber said he fears that all rulemakings, enforcement actions, and conservatorship appointments approved by an acting director could be challenged in court.

Treasury spokeswoman Desiree Tucker-Sorini denied that Mr. Wall has been asked to stay on as OTS director while this legal question is resolved. "We don't agree with the league letter," she said.

Lawsuit Questions Placement

One lawsuit, claiming that Mr. Wall was never legally placed in his post, is pending here. In that suit, American Heritage Bancorp, Norwood, Mass., claims it was unconstitutional for Mr. Wall to go from directing the former Federal Home Loan Bank Board to running the OTS without formal nomination and confirmation.



Jonathan L. Fiechter

Both the lawsuit and Mr. Webber's letter are forcing Treasury to stall the already painfully slow process to get a replacement for Mr. Wall.

And Mr. Wall's post is just one of many vacancies in the

See **TREASURY** *page* **22**

Correction

The Feb. 20 RTC Observer column ("Agency Hopes Ethics Loopholes Let It Hire Experts It Needs," page 8) understated the extent to which real estate brokers seeking work from the Resolution Trust Corp. must comply with the agency's ethics rules.

Real estate brokers who sell RTC properties in competition with other brokers are not required to comply with the ethics guidelines. However, brokers seeking exclusive listing agreements with the RTC must comply with the agency's ethics rules. Experts say the majority of brokers work only on an exclusive basis, which means that a substantial portion of brokers seeking work from the RTC must conform with the ethics rules.

Race for East Europe: Do U.S. Bankers Really Want to Win?

By BRIAN P. SULLIVAN
Special to the American Banker

U.S. banks are falling behind in the race to help rebuild the financial structure of Eastern Europe – a race West European banks are plunging into. West German banks, in particular, are staking out their turf early, seeking rich profits from the emergence of market economies in the former Soviet bloc.

But the Americans – burned badly in their headlong rush to London following deregulation there, reeling from losses on loans to lesser-developed countries, and distracted by big losses in risky leveraged buyout and real estate loans – offer few apologies for their better-safe-than-sorry strategy.

To be sure, U.S. banks are looking around, and several are already operating in Eastern Europe. Citibank has the largest presence, with a joint venture in Hungary. Manufacturers Hanover has had a branch in Romania since 1974. Both banks have been actively placing bond issues for Eastern European countries with international investors.

Chase Manhattan Bank is active in trade finance from its office in Moscow. Though it has no office in Eastern Europe, First Chicago works closely with a Soviet bank to supply financial advisory services to multinational corporations investing in the U.S.S.R.

The possibilities are remote that banks much smaller than these will be heading to Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Yugoslavia any time soon. "If they're not in Paris now, they're not going to Budapest tomorrow," said one international banking consultant.

Huge Growth Market

But the richness of the opportunities in Eastern Europe could turn even the most xenophobic heads in American banking.

Consider:

Average gross national product per capita in Eastern Europe in 1988 was $5,946, less than half the $12,515 GNP per capita of the European Community, according to PlanEcon, a leading consulting firm specializing in Eastern Europe. Yet all these countries share essentially the same geography, history, culture, and climate. Even if it takes 20 years for the East to catch up with the West, the potential surge in Eastern European economies could create one of the biggest growth markets in global banking.

The West to the Rescue

The infrastructure needs of Eastern Europe are vast, and only the West has the technical abilities to upgrade them.

The opportunity for banks: financing.

And U.S. bankers will find a rich market for their unique technical skills at structuring complex financings.

There will be more help from the U.S. government. In the budget submitted to Congress last month, President Bush asked that the $938 million appropriated last year for aid to Poland and Hungary also be used for Czechoslovakia, Romania, and East Germany.

The Commerce Department announced this month that it would send an officer to East Berlin to promote U.S. investment. Poland and Hungary already have such officers, and one is likely soon in Czechoslovakia.

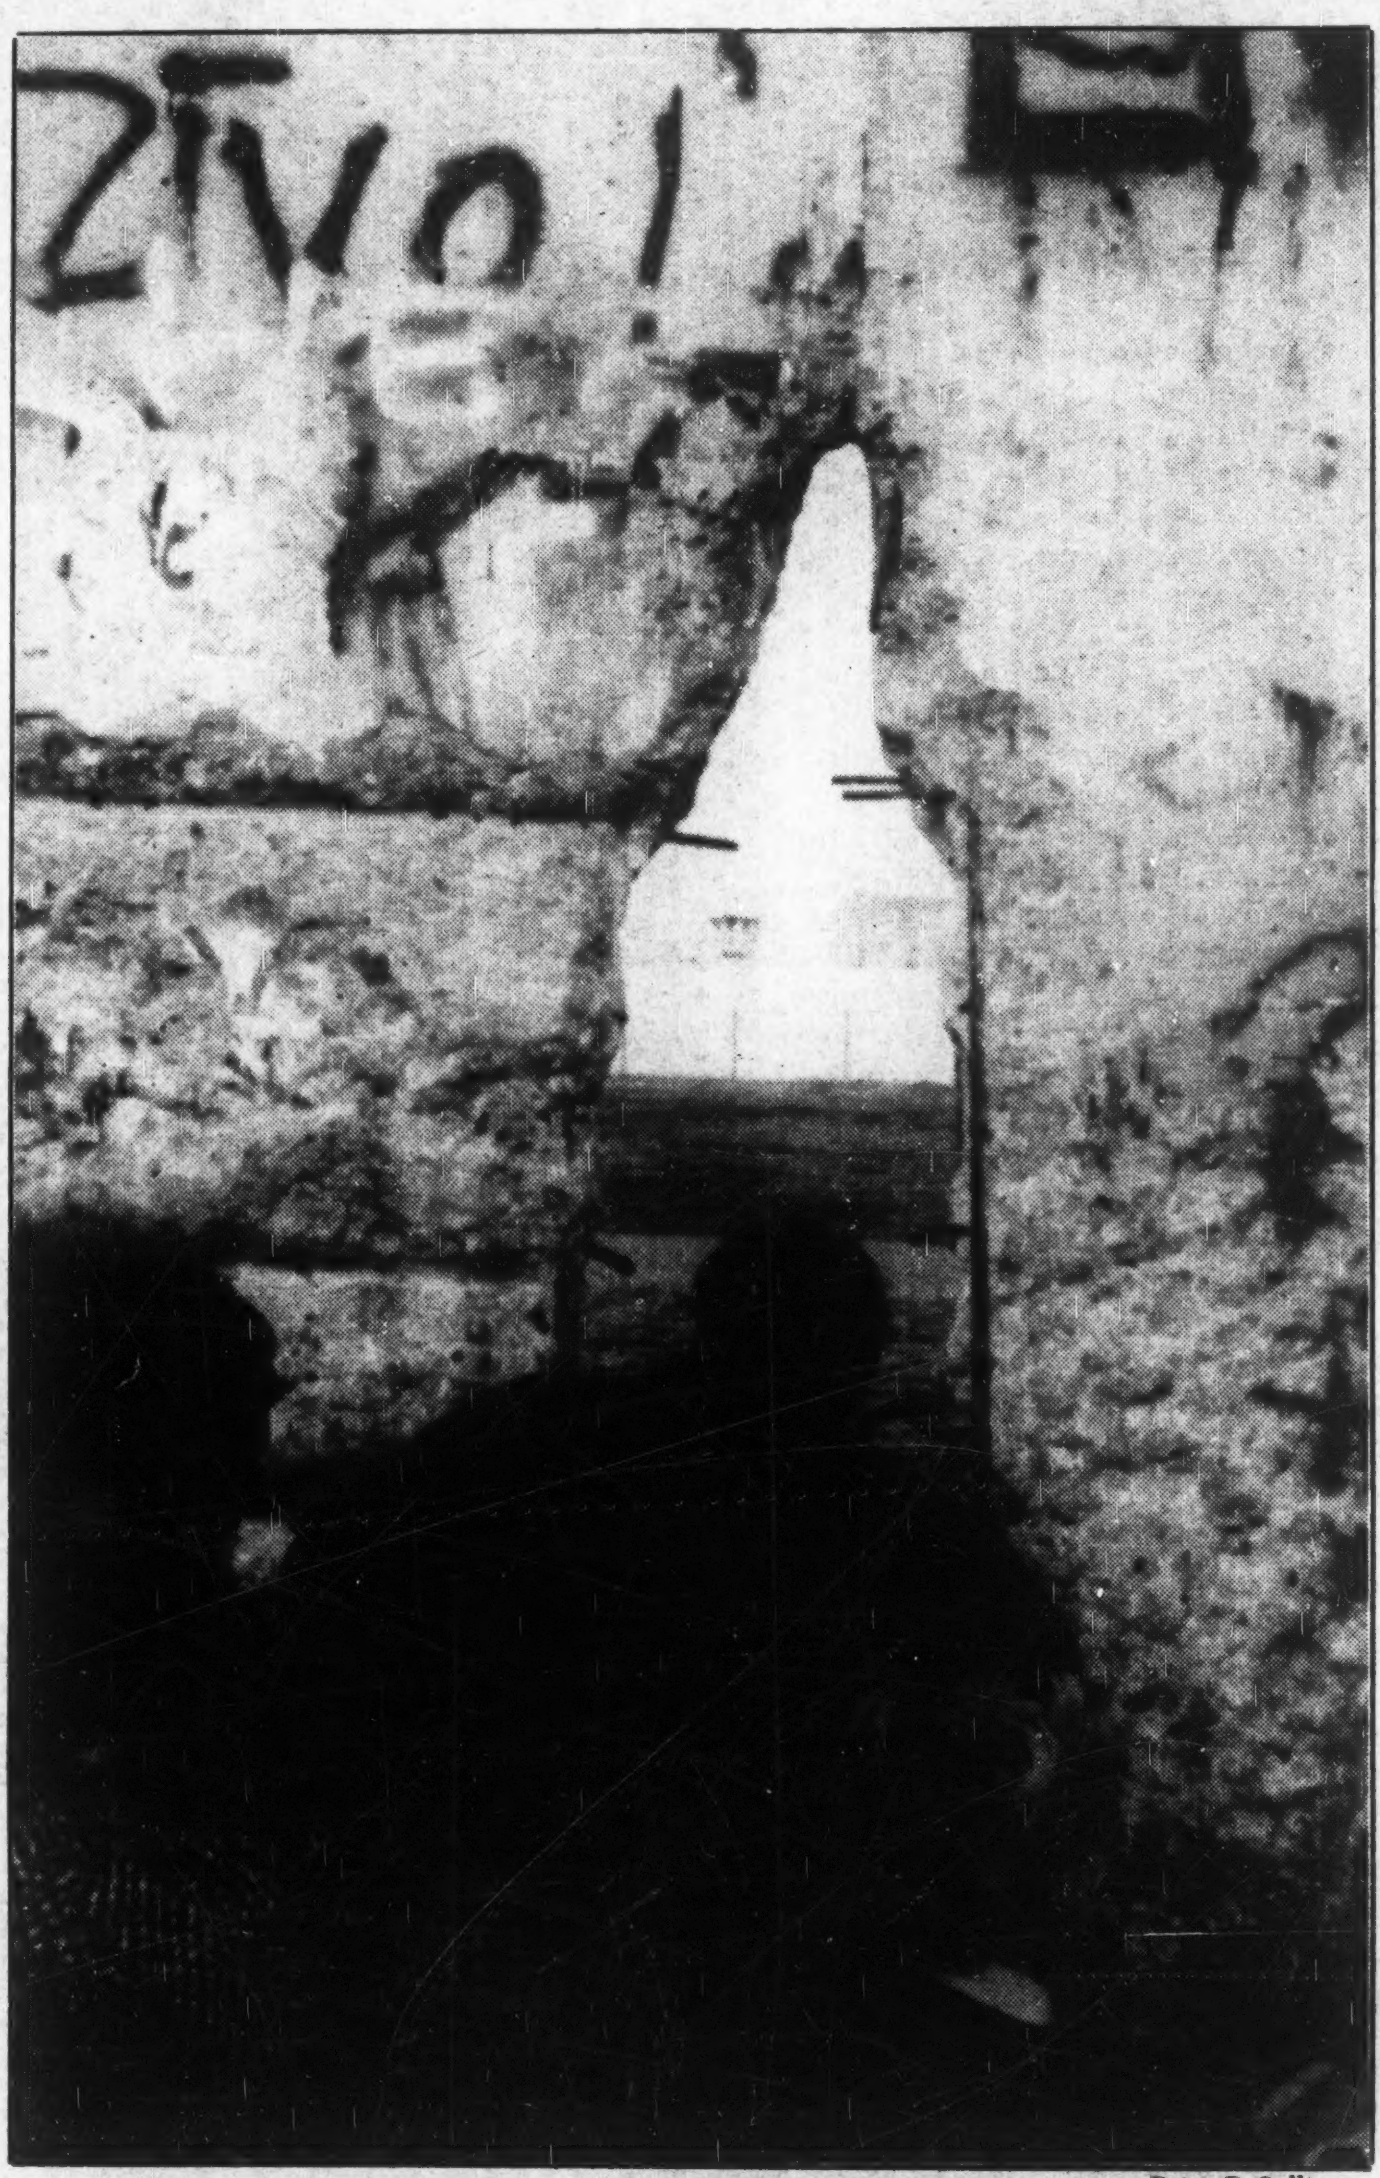
Most-favored-nation status, won by Poland and Hungary in recent years, is expected this year for Czechoslovakia and East Germany. The status grants favorable tariff treatment to trade with the U.S. That means more demand for trade financing.

The Overseas Private Insurance Corp. began offering political risk insurance coverage in Hungary last month, with plans to expand into other parts of Eastern Europe. The insurance reimburses investors for losses due to political turmoil.

"We've got a model now for ones that are coming in the future," said Fred Zeder, president and chief executive officer of the government agency.

More Money Needed

The government monopolies in Eastern European banking markets are coming to an end. Throughout the region, state-owned banks have begun spinning off commercial bank and savings bank operations, and private banks are in the formative stages.



Brian P. Sullivan

BEYOND THE WALL: With barriers between East and West crumbling, U.S. bankers ponder opportunities and dangers on the other side.

The countries of Eastern Europe will all need increased levels of lending to help spark new business growth. But for many domestic banks in Eastern Europe, loan demand exceeds deposit levels, so Western banks with access to capital will find fertile ground, provided they can find the better deals. Also, businesses in the East will need trade finance. They will need consumer credit.

It was just these opportunities that attracted American banker Michael J. Shade, who moved to Budapest in June 1988 to help set up a new commercial bank in Hungary. Though he sensed a good business opportunity, he didn't expect to be part of history.

"I came because I could see that banking in Eastern Europe was going to change radically," said Shade, a full-time bank operations consultant to Commercial and Credit Bank Ltd. of Hungary.

"But the rate of change that has gone on in Eastern Europe is way beyond what anyone of us could have expected. It has been unbelievable from a personal standpoint. From a banking standpoint, it has been somewhat frustrating, but we have accomplished a great deal."

Realities of Macroeconomics

There are, of course, numerous roadblocks to overcome. The euphoria of political change has made all things seem possible, but several macroeconomic problems seem inescapable. And any one of these problems could cause an economic collapse, wiping out investments by bankers.

The first major problem is unemployment. Although communism has been a total economic bust, it has managed to give everyone some kind of job. That will no longer be true in market economies, no matter how they are structured.

Euphoria to Unemployment

Discussions with top government officials in Czechoslovakia and East Germany and Hungary in January found many naively claiming that they would learn from the mistakes of other nations, and their neighbors, to avoid high

The richness of the opportunities in Eastern Europe could turn even the most xenophobic heads in banking.

Continued from *page* **1A**

unemployment. But one of the foundations of market economics is unemployment. The work ethic is not built solely on the hope of advancement; it is also based on fear of losing a job. And wage scales, at least at the lower levels, are kept in check by competition for jobs.

Margaret Thatcher, broadly hailed as a queen of market economics, struggled to end a long pattern of nationalized industry in Great Britain by bringing back a more pure form of capitalism. The result? Painfully high unemployment. It is not likely the new converts to market economics will be able to avoid the same fate.

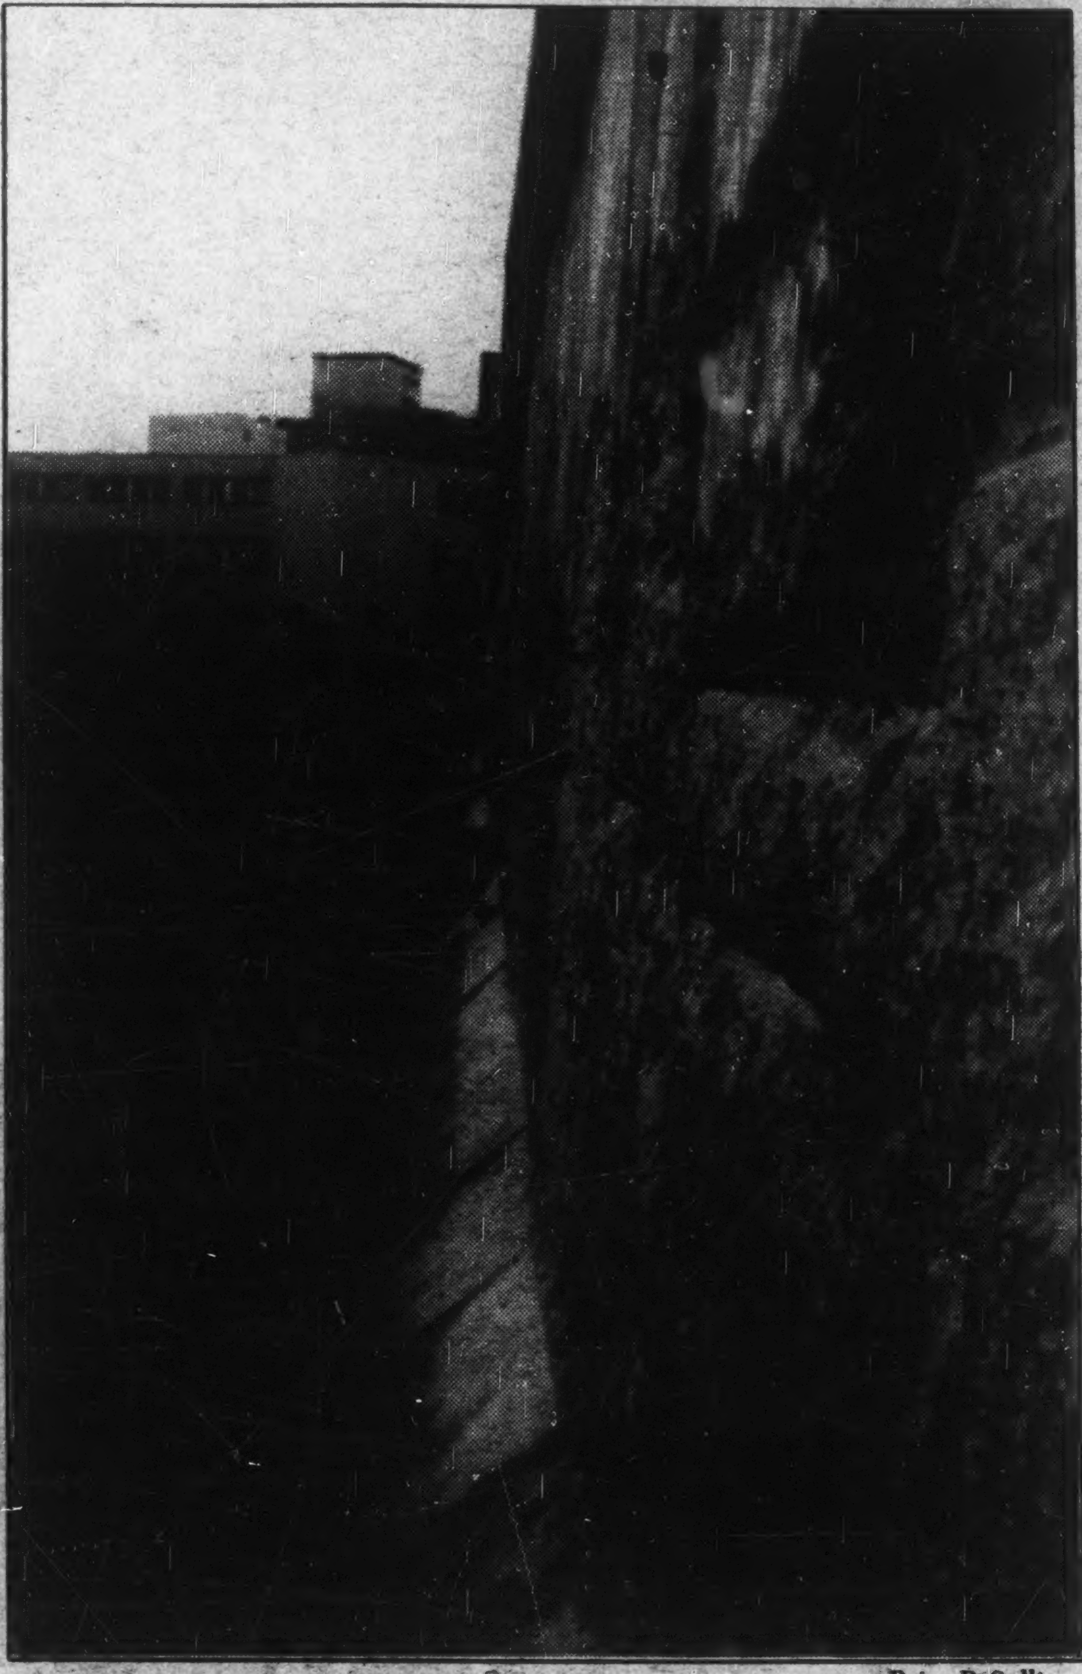
A final worrisome factor on unemployment: with economies in turmoil, it will be difficult – if not impossible – for Eastern Europe to afford the social welfare benefits that make unemployment marginally bearable in the West. Poland recently instituted a carefully crafted unemployment insurance system designed to encourage worker retraining. There was only one catch: There is virtually no money to pay benefits.

The demands for these benefits will be one of the many political pressures that could endanger repayment of sovereign loans. That is, if any U.S. bank has so short a memory that it has forgotten the expensive lessons of LDC debt.

After unemployment, the second big macroeconomic concern is inflation.

Officials in the new provisional governments of Eastern Europe are more realistic about their inability to keep prices under control than they are about unemployment.

Hungary, at the forefront of dismantling price controls, has seen two waves of dramatic price increases. This month alone, rents for state housing rose by an average of 35%, inner-city transport ticket prices jumped 45% (although the cost was next to nothing to begin with), telephone charges rose 35%, and charges for sewage services more than tripled.



Brian P. Sullivan

WILL WESTERN BANKERS scale the obstacles to doing business in Eastern Europe?

The government is forecasting inflation of about 25% this year, but several Hungarian trade and finance officials conceded that it is more likely to run between 30% and 40%.

"The people are very angry" about the price increases, said Gyorgy Gonda, adviser to the chairman of the Hungarian Credit Bank Ltd., and onetime Hungarian commercial counselor in New York. "They don't understand. But if you want a market economy, this is the only way."

High inflation undermines banking by discouraging saving in favor of consumption while increasing loan demand because repayment will be relatively less expensive in the future. In Brazil and Argentina, for example, the populace has become extraordinarily adept at playing the inflation market, making it hard for banks to comfortably manage their affairs.

Good Credit Histories

For all its economic shortcomings, at least most of Eastern Europe paid its bills to the West. The most dramatic evidence of that was in Romania, where the regime of Nicolae Ceausescu forced the country into a murderous austerity program to pay off $11 billion in debt.

In Hungary, the government keeps pledging to pay off all its $11.2 billion in commercial bank debt to the West, and true to is word payments are current, although in the future that fidelity is anything but certain.

Indeed, with so much changing, past performance is no longer a guide. Many banks are selling off their share of Poland's $9.1 billion in commercial bank debt at 16 cents on the dollar, convinced the Poles aren't joking when they say they have no intention of paying everything back.

The Biggest Gamble

These economic pressures, and others, add up to the biggest gamble of Eastern Europe: that the population will be willing to accept a sharply lower standard of living in order to help in the tricky business of making over entire national economies. The political pressures may indeed kill the entire venture.

'I think it is fair to say we are cautious' about lending to Eastern Europe.

John Reed
Citicorp

"I think it is fair to say we are cautious" about lending to Eastern Europe, Citicorp chairman John Reed recently told Reuters.

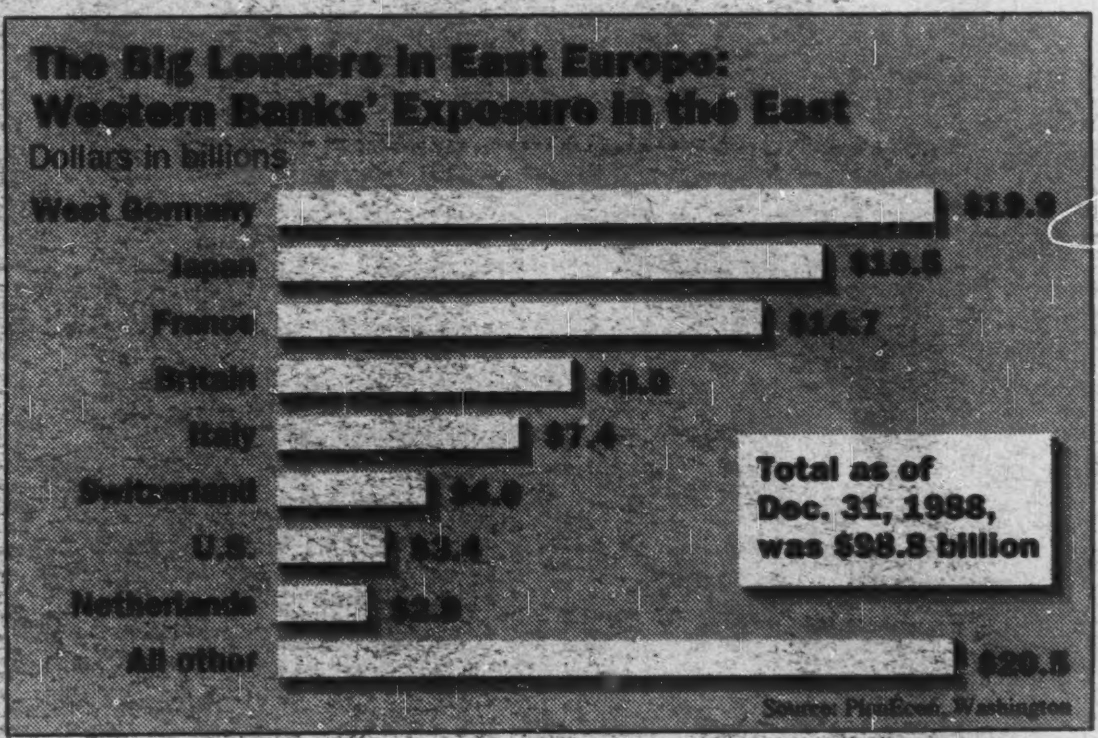
"We are concerned that changes have taken place very quickly . . . and that it is very difficult for us to forecast where things are going. . . . As we look for opportunities to invest or participate in Central Europe, or indeed Russia . . . we have to ask if there could not be a reversion," Mr. Reed said.

Eastern Europe's Last Chance

On a gray winter day in Budapest, Mr. Gonda looked from the window of his office at Hungarian Credit Bank toward the government buildings surrounding Szabadsag Square. He commented on the absence of the red stars that once dominated the roof line. They came down overnight, he said, and as shocking a development as that was, it was nothing compared to the difficulty of building a new economy. His immediate concerns were for Hungary, but his words clearly reflected those of his former communist neighbors as well.

"1990 is a turning year in the Hungarian economy," he said. "And it could be our last chance." ☐

The Big Lenders in East Europe: Western Banks' Exposure in the East



Source: PlanEcon, Washington

U.S. Investigator Screens Frauds

Money launderers, con men, and hair-brained investors are lining up right alongside thousands of legitimate businessmen, all eager to make deals in Eastern Europe.

Kroll Associates, the New York-based U.S. corporate investigative and security company, is hard at work helping several East European central banks separate the bona fide opportunities from fraudulent ones.

Over the past five months, Kroll has stepped up its investigations by working with consultants in Vienna, relying on their inside knowledge and close relations with Eastern European institutions.

The company is also planning to set up an office in Europe to handle an expected surge in business, but has not yet decided on a location. Kroll's only European office is now in London.

Like many other corporations looking at Eastern Europe, Kroll sees Vienna as a natural point of entry.

"It's a highly developed business center in a neutral country and has always been a center of intelligence for Eastern Europe," said Mr. Pomerance. The Viennese themselves, most of whom are either refugees or descendants of people from Eastern Europe, are probably better attuned to developments there than anyone else.

'Know Thy Customer'

"It's the old saw," said Jerome J. Pomerance, executive managing director: "Know thy customer."

As legislation to prevent money laundering and tax evasion is tightened around the world, observers have predicted, hot money may soon start flowing East to countries like Hungary, which retain stringent bank secrecy laws and are under no treaty obligations to disclose financial information.

But ferreting out the hack business offers, rather than fraud, is the biggest part of Kroll's work in Eastern Europe today, Mr. Pomerance said.

Finding out who you are dealing with on Wall Street can be hard. In Eastern Europe, it is even harder, he said.

Washington wants to see the new bank develop along the lines of the International Finance Corp., the World Bank affiliate that makes loans mostly to private companies.

Continued from *page* **7A**

World Bank, which will likely cofinance many of the new entity's ventures.

"We're stuck with an 8.5% controlling voice," one Capitol Hill staffer says. A bill that is going through the House now would appropriate a $250 million capital contribution to the bank.

"Even if we came in and said we're willing to pay whatever it takes so we could get veto rights, the Europeans would say, 'No way. This is Europe. Give us the majority stake.' "

Full Soviet Role Opposed

Although the Treasury Department will not comment, it is widely believed to oppose the entry of the Soviet Union into the bank with full borrowing rights.

But the EC members favor the entry. It would mark the first time Moscow has joined a multilateral bank.

There is likely to be a compromise, since the huge Soviet economy could eat up most of the bank's capital by itself if there were not a cap on their borrowing. Similar reasons kept China and India off the borrowing rolls at the Asian Development Bank until the last few years.

Only Name Is Certain

At this point, the only thing that seems definite about the new institution is the name, which is modeled on the World Bank's full title, the International Bank for Reconstruction and Development.

Vienna, Berlin, Copenhagen, and Prague are all considered possible locations for its home base. Recent reports have indicated the United States is favoring Prague.

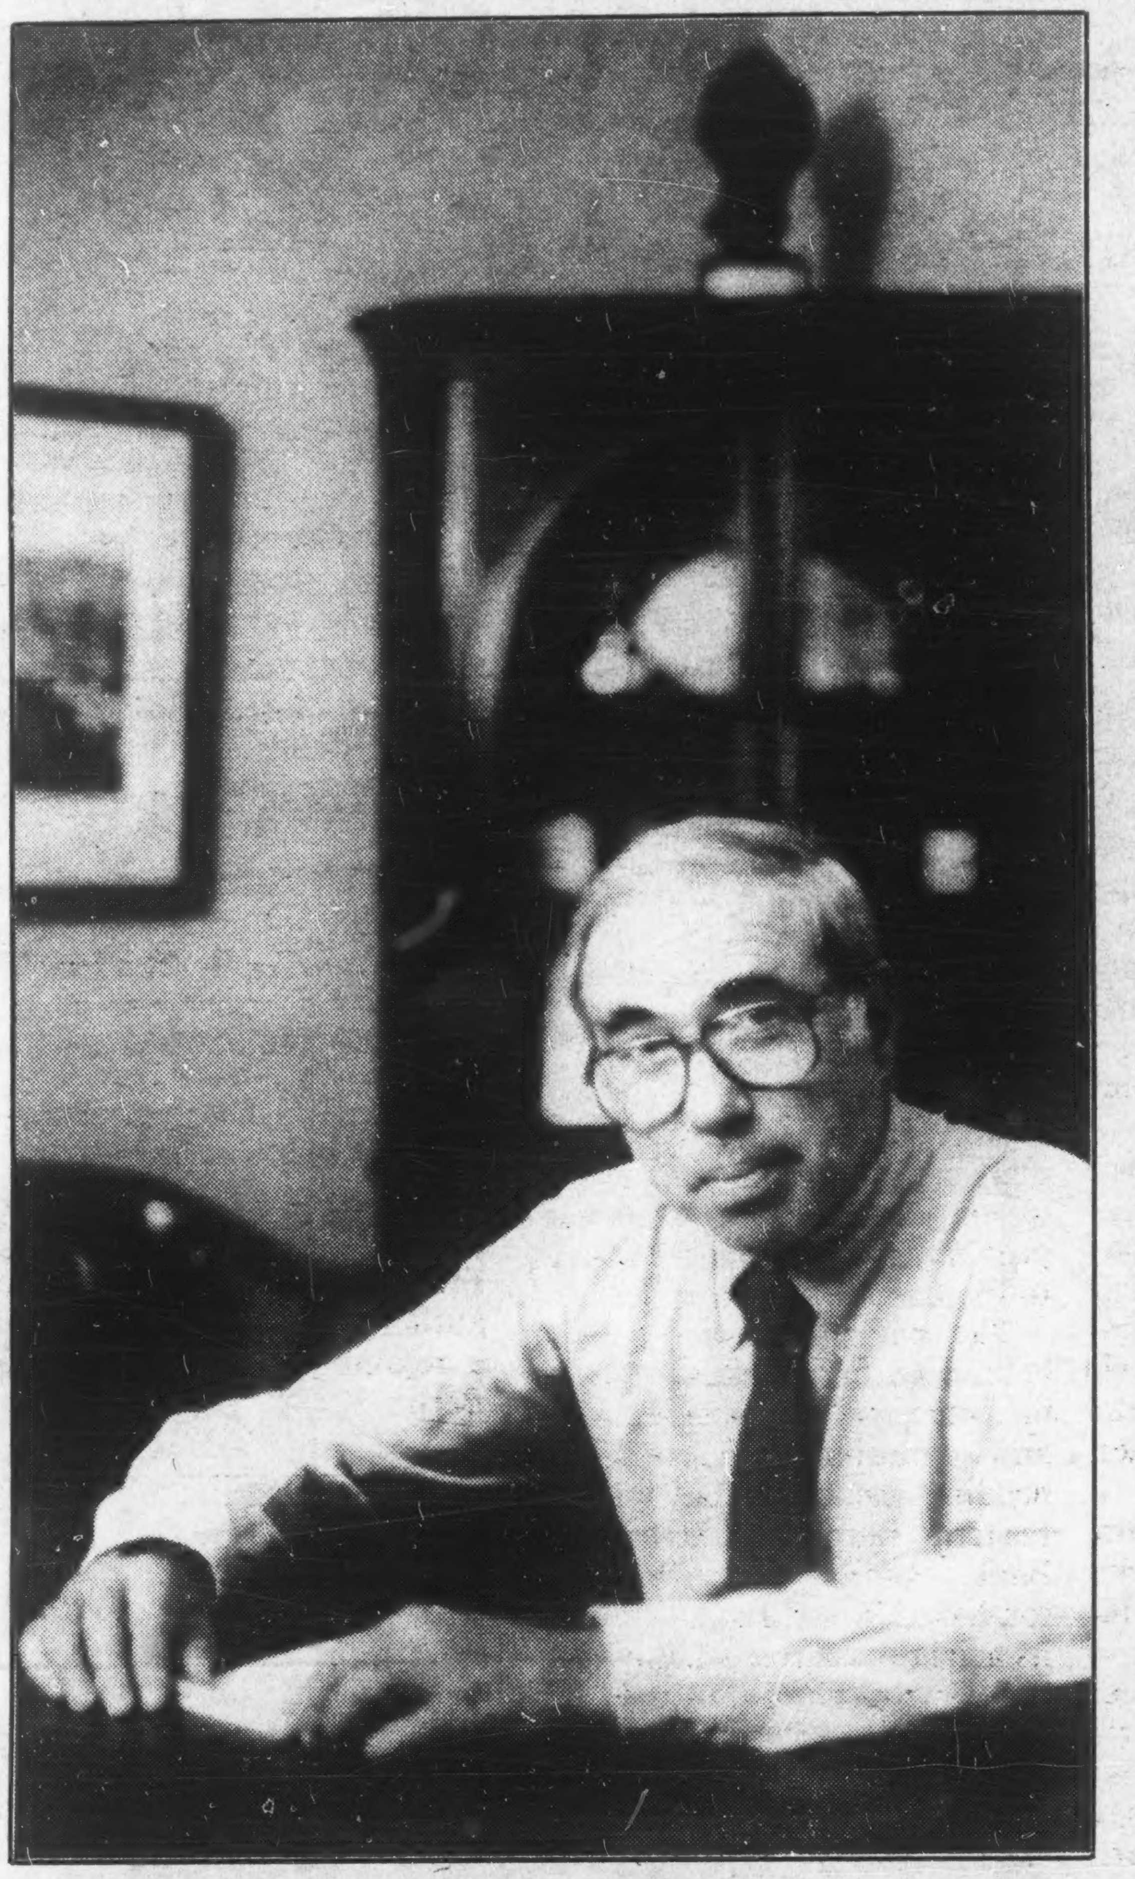
No favorite has yet emerged as the new bank's first president. But French sources say the recently retired Dutch finance minister, H. Onno Ruding, is rumored to want the job. When Mr. Ruding left office early last fall, he was also chairman of the International Monetary Fund's policy-making Interim Committee. He lost out to Michel Camdessus of France in the 1986 race for the IMF's top job.

Attali a Key Figure

Jacques Attali, an economic adviser to French President Francois Mitterand, is considered one of the key shapers of the new bank along with members of Finance Minister Pierre Beregovoy's staff.

The key U.S. negotiators so far have been Treasury's top guns on international finance, David Mulford and Charles Dallara, and the head of its multilateral development bank office, Frank Vukmanic.

Felix Rohatyn of Lazard Freres & Co. has been the most outspoken supporter of the idea on Wall Street. A supporter of developing a new "East European Common Market," Mr. Rohatyn has insisted from the beginning that only countries with free elections and a multiparty democratic system should be eligible for financing. That would appear to exclude Yugoslavia and the Soviet Union, although both countries have been involved in the recent negotiating sessions and appear headed for some kind of role at the new bank.



ENDORSES IDEA: Felix Rohatyn has been the most vocal Wall Street supporter of East European development bank.

Mr. Rohatyn also supports borrower eligibility terms that would include written agreements on personal, physical, and intellectual property rights. He also says the new bank may need affiliated housing finance and farm credit institutions.

Commercial banks may be approached for cofinancing down the road.

In an interview in the current issue of the European Community magazine, *Europe*, he says the new bank should have a role that goes beyond lending, providing technical assistance to the emerging free-market economies of Eastern Europe for the launching of accounting and banking systems.

"It's in those areas, as well as essentially the extension of credit, or even the making of direct investment, that would be a useful thing for an investment bank like the East European Development Bank to function in," says Mr. Rohatyn.

"Such a bank can also clearly be a catalyst. They don't nearly have to put up all the money for the projects they get involved in."

Bond Issues Expected

Mr. Rohatyn expects the bank will eventually raise a substantial portion of its funds through bond issues on the international capital markets, as the world's other multilateral development banks do.

But S. Melvin Rines, a senior vice president at Kidder Peabody & Co., who follows the multilaterals closely, says the major credit-rating agencies will probably demand plenty of time before they issue the bank's bond rating, which could keep the bank from building up its capital as fast it would want to.

But with time in short supply, Mr. Rines thinks the wiser thing to do would be to give the World Bank's International Finance Corp., more money to invest in East Europe in the next few years.

"There are other development banks around that took years and years to get off the ground," Mr. Rines warns.

***The World Bank Watch* is an *American Banker* newsletter.**

World Bank's Private-Sector Unit Set to Move Swiftly

Until recently, there hasn't been much of a private sector in Eastern Europe.

But that hasn't stopped the private-sector development affiliate of the World Bank from investing almost $85 million there in the last few years. That amount will probably be dwarfed by the institution's future operations in Eastern Europe.

The affiliate, International Finance Corp., has a history of teaming up with other investors to support promising private-sector projects worldwide. Its director, former British government official Sir William Ryrie, sees the IFC playing an increasingly significant role around the developing world in the 1990s, when many analysts see private-sector operations replacing government projects as the catalyst to economic growth.

The IFC plans to increase its presence in Eastern Europe substantially in the next few years.

Style Will Change

In Eastern Europe, that has generally meant picking government-led projects that allowed for strong input from local entrepreneurs. But with privatization and Western-style financial systems catching on fast in the region, the day is probably coming when the IFC will lend directly to private Eastern European firms, as it does in other countries.

The proposed multilateral development bank for Eastern Europe will no doubt do the same thing, and interact closely with the IFC in the early stages.

The IFC's longest ties in the East are with Yugoslavia, in which it has invested $500 million over the years. Last year the institution poured $31.3 million into two Yugoslavian banks for lending to export-oriented businesses and $9 million more to help the Sozd Iskra motor and machinery firm modernize its facilities.

Advice Is Given

While similar loans will come, the increasingly service-minded IFC is also advising Yugoslavian authorities on ways to revise their foreign investment code.

Hungary joined the IFC in 1985, primarily looking for help in establishing joint ventures and reorganizing its financial sector. The IFC has put $55.3 million into Hungary since then, with the single biggest investment being $17.2 million for the Dumamont Polystyrene textile company. It also teamed up with DG Bank in Germany and GZB Bank in Austria to fund a new Hungarian capital-markets institution called Unicbank, and helped organize a $70 million country fund managed by Bear, Stearns & Co. in New York.

Poland's first IFC project came in late 1988, in the form of a $15 million investment in Hortex, an export-oriented cooperative jointly owned by 300,000 farmers. A year later a $25 million IFC line of credit to the new Export Development Bank in Warsaw was announced.

Urgency in Poland

In January, the IFC began touting itself as "a principal adviser on privatization to the Polish government" and said it was responding to an "urgent request" from the country's central bank for advice on introducing "the general ground rules for the entry of foreign banks."

The IFC plans to increase its presence in Eastern Europe substantially in the next few years. Although specific target figures are not available, its equity investments and loan commitments are sure to rise, as are its less visible technical-assistance projects in investment promotion, joint ventures, privatization, financial liberalization, and the like.

And with Czechoslovakia already applying to join the World Bank Group and Romania discussing possible reactivation of its long-dormant membership, there will probably soon be opportunities for operations in new areas as well.

Will Brady Plan Work in the East?

Debt Reduction Appeals, but It Could Stall Financing

By ED PAISLEY
LDC Debt Report

Which would be better for the Eastern European nations: debt reduction under the Brady plan or possibly greater access to existing and future financing from Western banks?

This is the latest economic dilemma facing the region. There is little question that debt relief offered to Eastern Europe under the Brady plan would have an effect on how much access it has to new loans. In the past, when bankers have agreed to debt reduction agreements with other developing nations, they have declined to grant significant new loans to the debtors.

Each country has come up with its own approach to the problem. Poland, with a huge debt overhang, has welcomed the Brady plan with open arms. Two other countries – Hungary and Yugoslavia – are likely to weigh their debt reduction options as well in the 1990s.

But for Bulgaria, Romania, Czechoslovakia, East Germany, and the Soviet Union – all of which owe much less debt in relation to the size of their economies – commercial bank investments will hinge more on the success of their individual free-market reform programs.

"The prospects for the Brady plan are quite good in Poland, Yugoslavia, and also Hungary," said professor Jeffery Sachs, a Harvard University professor who is advising Warsaw and Belgrade on their free-market reform efforts. "The situation [in these three nations] is a classic case of Chapter 11; get rid of the detritus of 40 years of communist economic mismanagement and start with a clean slate."

Further, Mr. Sachs believes that the opportunities for Western banks in these three nations "are excellent, once the debt is cleared away."

Bankers, of course, see it differently. "Constructive internal reforms have to take place, to show the financial transparency of projects, or who will be the debtor if a bank lends money," said Klaus Friedrich, the director of the International Institute of Finance's European division, a Washington-based commercial bank think-tank.

Hard Currency Needed

Debt reduction would certainly stanch the outflow of desparately needed hard currency from Eastern Europe, but might well inhibit banks from extending new loans to the region – loans urgently needed to rebuild a decrepit industrial infrastructure and to finance exports.

Facing this dilemma, Poland, Yugoslavia, and Hungary are rushing to embrace the free-market reforms that are the quid pro quo for debt relief under the Brady plan and, ironically, for any new commercial bank lending.

Other nations of the former East bloc are leaning toward implementing similar reforms. With close to $100 billion in sovereign loans owed to the West by the Soviet Union, its six Warsaw Pact allies, and Yugoslavia, debt relief is no idle matter for the new governments of Eastern Europe or Western banks.

Reforms Will Precede Loans

Complicating these decisions for bankers and East European politicians alike are the unknown ramifications of these revolutionary economic reform efforts. Some experts, such as Richard Erb, the assistant managing director of the International Monetary Fund, believe that dismantling Eastern Europe's centrally planned economies will not be as difficult as some imagine.

Speaking before the National Economists Club recently, Mr. Erb said that "reforms of centrally planned economies [in Eastern Europe] are of a magnitude and comprehensiveness not experienced before, but these reforms are not new."

He then noted that these nations are "facing the same kind of problems that more market-oriented economies face . . . dilemmas, choices that much of Latin America has had to face, or even that South Korea had to face at an earlier time."

Clearer Picture Needed

But bankers are unlikely to lend until thay have a clearer idea of just where these reforms are headed. East European governments too – with the notable exception of Poland – may remain wary of embracing the Brady plan until they can gauge how much foreign investment is indeed flowing into their countries.

Poland, Hungary, and Yugoslavia are the three nations most likely to seek immediate benefit from the Brady plan, while simultaneously pressing the banks for trade and project loans.

To handle the trade and project loans, Mr. Friedrich of the IIF called for "a new modality of cooperation" between the international banking community and the World Bank, the IMF, and new European Reconstruction and Development Bank for Eastern Europe. "Good public-/private cooperation in cofinancing projects is needed" for Eastern Europe to grow, he said.

But Mr. Friedrich warned that for Poland, at any rate, even project and trade finance are in

Amy Suzanne King

KLAUS FRIEDRICH, of the International Institute of Finance, cautions bankers to make sure reforms in Eastern European economies take place before they commit finances.

Continued from *page* **11A**

jeopardy because of its embrace of the Brady plan. A banker on Poland's bank advisory committee, which is led by Barclays Bank PLC, echoed this warning.

"Taking exposure in any form in Poland will be tough to get past a credit committee," said the international banker, who spoke on condition of anonymity, "particularly when [Poland] isn't servicing its current obligations."

Poland stopped servicing its roughly $9 billion of medium- and long-term commercial bank debt in the fourth quarter of last year, after religiously paying the banks interest – although not principal – through the 1980s. Poland's debt totals about $40 billion, according to the latest estimates by the World Bank.

Warsaw Opts to Cut Debt

The new Solidarity-led government in Warsaw has made clear to its bank creditors that Brady-style debt reduction is in the cards for 1990. Poland has freed its currency exchange rate and will soon begin overhauling a host of inefficient state-run enterprises, bleeding the nation's already strained foreign currency coffers.

Yugoslavia and Hungary, both with serious debt overhangs, are also pressing ahead with radical free-market economic reforms. But for these two nations, both of which are still servicing their foreign debt, the promise of direct Western investment has held consideration of the Brady plan at bay.

In Yugoslavia, a successful attack on inflation last month drove the inflation rate, 2,500% last year, into the teens. With prices dropping, Belgrade's chronic ethnic feuds may become more manageable and its economic reforms more telling, said East European experts.

Bankers, too, are keen on Yugoslavia's reforms. "I think foreign investors should take a long, careful look at Yugoslavia now," said Margaret Mudd, chairman of Yugoslavia's bank advisory committee for Manufacturers Hanover Trust Co. "What they've done makes foreign investment very attractive, especially being so well positioned for exporting to the European Community."

Indeed, Manufacturers Hanover and other U.S. and European banks, among them Citibank, are looking over some of Yugoslavia's state-owned banks, which are soon to be privatized. The laws and regulations allowing this to happen are now on the books, but officials in Belgrade said these banks' balance sheets must be cleaned up before actual bidding can begin.

Link Will Be Costly

But Belgrade's decision to link its currency to the West German mark will soon cost the government dearly, as it clears bad assets off the books of state-run banks and industries set to be taken private. Officials in Belgrade are now in the midst of reviewing their Brady options should foreign reserves slip dangerously low and foreign investment not pick up significantly in the coming year.

Yugoslavia's total foreign debt stands at $17.8 billion, $7.2 billion of which is owed to commercial banks. Last year, all of the nation's medium- and long-term bank debt was rescheduled over 18 years with six years' grace. Belgrade has retired about $1.2 billion of its bank debt in the last two years through debt-equity swaps.

In Hungary, on the other hand, the reform-minded Communist government is adamant about fully servicing its foreign debt. But with one of the highest ratios of debt to gross domestic product in the developing world, Hungary's $11.2 billion medium- and long-term debt may prove a tempting source for cost cutting when a new government takes over in the spring.

No Word from People

"I suspect that the new government in Hungary will say it needs deep debt reduction," predicted Harvard's Mr. Sachs. "No one has spoken for the people of Hungary yet."

But equally enticing for any new Hungarian government is the prospect of huge Western – and particularly Japanese – direct investment.

"Many Japanese trading companies are increasing their representations in Hungary and throughout Eastern Europe," said a banker from the Japan Center for International Finance, a Japanese financial services industry think-tank. "Japanese banks will follow if trading companies invest, but much will depend on how Hungary's sovereign loans hold up."

Japanese banks hold more than a third of Hungary's $11.2 billion commercial bank debt, totaling $3.5 billion at the end of 1988, with West German banks the next heaviest exposed with $2.5 billion, according to PlanEcon Inc., a Washington-based private research organization that specializes in East European financial analysis.

East Germany the Key

For Bulgaria, Romania, Czechoslovakia, and the Soviet Union, bankable investments may still be held up until the reform efforts in East Germany take form, said many bankers and East European experts.

"If [East Germany] takes off, 70% of its trade is with Eastern Europe, which will infuse new technology throughout the East bloc," said the IIF's Klaus Friedrich. "If East-West detente continues, and yet East Germany – everyone's favorite candidate for Western capital – fails to take off, this will depress investment for the whole region."

Unlike Latin America, then, debt relief at least for some countries in Eastern Europe will not be one of the major prerequisites of economic growth. But like much of the developing world, domestic structural reforms and deregulation – not direct foreign investment – will be the catalyst for sustained economic growth.

Source: American Banker survey questionnaires and Federal Reserve Board data. **The totals** for each bank are based on the **combined** business loans (C&I loans), deposits, and assets for all of the bank's U.S. banking offices, for which data were available. **U.S. banking offices** include: agency offices, branches, commercial bank subsidiaries, New York State investment companies, and Edge banks. **% Chg. C&I** is the annual growth in commercial and industrial loans over the year ended 6/30/89 and 6/30/88, respectively. Note: percent changes based on unrounded figures and may differ slightly from dollar figures shown. **(a)**— The data for 6/30/88, does not include the acquisition of Union Bank, Los Angeles, which was completed on 10/31/88.

Compiled by American Banker, Copyright, 1990.

Summary of Survey Findings

All data totals and the number of offices shown here— under each office type— are for the banking offices providing data for the survey. **C&I loans, deposits and assets** for June 30, 1989 and June 30, 1988 were used for all banking offices. **(a)—** Commercial bank number count includes bank head offices only. Branches of these banks are not included. **(b)—** Edge bank number count includes Edge branches. To avoid double counting, data for Edge banks, which are subsidiaries of foreign bank-owned U.S. commercial banks, are excluded from the totals for C&I loans, deposits, and assets. **(c)—** The total number of U.S. banking offices of foreign banks— including those offices for which data were not available— were 704 on 6/30/89 and 675 on 6/30/88. **(d)—** The asset, deposit, and C&I data for all U.S. banks are from the Federal Reserve Bulletin. The number of U.S. banks includes all U.S.-chartered, FDIC-insured commercial banks; the U.S. branches and agencies of foreign banks; all U.S. Edge Act bank offices; and New York State investment companies. These data were provided by the Federal Deposit Insurance Corporation, and Federal Reserve Board. **(e)—** The ratio is all U.S. offices of foreign banks— including those for which data were not available— divided by all U.S. banking offices.

Growth in C&I Loans, Deposits, and Assets at U.S. Banks

Foreign Bank-Owned U.S. Banks Compared with U.S.-Owned Banks from 6/30/82 to 6/30/89 (Dollar Amounts in Billions)

Foreign Bank-Owned U.S. Banks[1]	C&I Loans June 30	% Chg.	Deposits June 30	% Chg.	Assets June 30	% Chg.
1989	$178.9	+8.9	$370.4	+11.8	$695.6	+9.0
1988	$164.3	+18.6	$331.2	+5.5	$638.3	+11.6
1987	$138.5	+21.3	$314.0	+23.0	$571.9	+24.1

1985	$105.7	+13.8	$259.5	+13.8	$423.8	+11.3
1984	$ 92.9	+ 9.4	$228.2	+27.5	$380.9	+18.4
1983	$ 84.9	+ 2.3	$179.0	+20.5	$321.6	+12.7
1982	$ 83.0	+19.9	$148.6	+17.9	$285.4	+ 9.1
U.S.-Owned U.S. Banks[2]						
1989	$449.4	+ 3.6	$1,767.8	+ 3.3	$2,378.0	+ 3.9
1988	$433.9	+ 3.4	$1,711.3	+ 6.3	$2,289.2	+ 6.1
1987	$419.5	+ 4.4	$1,609.4	+ 4.5	$2,158.5	+ 5.3
1986	$402.0r	+ 6.2	$1,540.8	+10.0	$2,050.7	+ 8.9
1985	$378.6	+ 5.2	$1,400.3	+ 7.3	$1,883.3	+ 8.6
1984	$360.0	+15.8	$1,304.7	+ 3.2	$1,734.6	+ 3.2
1983	$311.0	+ 2.4	$1,264.8	+ 7.4	$1,681.4	+ 7.1
1982	$303.7	+ 9.9	$1,177.2	+ 6.0	$1,569.3	+ 6.4

Data for this table are calculated by American Banker using its survey data of foreign banks in the U.S. and the Federal Reserve Board's aggregate data on all banks in the U.S. **(1)—** Foreign bank-owned U.S. banks include: commercial bank and Edge bank subsidiaries; branch and agency offices; and New York investment companies. **(2)—** U.S.-owned U.S. banks include all commercial banks and Edge banks in U.S. that are not owned by foreign banks. **Note:** Data for 1985 were not adjusted for the sale of Crocker National Bank, San Francisco, by Midland Bank PLC, London, to Wells Fargo Bank NA, San Francisco. Thus, 1986 growth is understated for foreign-owned U.S. banks and overstated for U.S. owned U.S. banks.

Data Source: **ADP Data Services Division, New York**. Data are from the federal regulatory Report of Income for June 30, 1989, and December 31, 1988. ADP calculates the **return on average assets** for the first half of 1989 by annualizing net income for the first half of 1989 and dividing that figure by average assets over the period. Net income and ROA for 1988 are for the entire year. Data have been adjusted for mergers over the period. **Note:** Caution is advised in interpreting the profitability of foreign banks' U.S. operations. A foreign bank's global revenue maximization strategy may find it more profitable not to show sizable profits in its U.S. bank subsidiary.

Data Source: **ADP Data Services Division, New York**. Data are from the federal regulatory Report of Income, and ADP adjusts the data for mergers over the period. **5-Yr ROA** is the return on average assets over the five-year period 1985-1989. ROA is calculated by summing net income for 1985 through 1989 (annualizing 1989 net income as described below) and dividing by the sum of average assets over the period. **1989 ROA** is the return on average assets for the first half of 1989. It is calculated by annualizing net income for the first half of 1989 and dividing that figure by average assets over the period. **Income growth** is annualized net income for 1989 divided by net income for 1985. **Asset growth** is total assets on June 30, 1989, divided by total assets on Dec. 31, 1985. **Note:** Caution is advised in interpreting the profitability of foreign banks' U.S. operations. A foreign bank's global revenue maximization strategy may find it more profitable not to show sizable profits in its U.S. bank subsidiary.

Data Sources: **American Banker** questionnaire and the **Federal Reserve Board's** reports of condition for branches, agencies, Edge banks, and New York State Investment Companies. **Description of table:** foreign banks with full banking offices in the U.S. are listed alphabetically by country. Within each country, the banks are listed alphabetically by name. If data for an office were not available, the office is not listed. The data shown for each bank are combined to include all of the bank's U.S. banking offices. **No. of Offices:** the total number of branches, agencies, Edge banks, commercial banks, thrifts (acquired in 1989) and N.Y. investment companies. **C&I loans** are commercial and industrial loans, which are commonly known as business loans. **Parent company's assets** are shown immediately below the name of the bank and are for 12/31/88, or nearest fiscal yearend, for banks providing data for *American Banker's* World Bank listings published July 25, 1989. **Ratio (%)** represents the June 30,1989 assets of the bank's U.S. office(s) to the bank's total worldwide assets the previous yearend. **Location of Offices and Type:** **A**=Agency; **B**=Branch; **C**=Commercial Bank; **E**=Edge bank; **Eb**=Branch of Edge bank; and **I**=New York Investment Company; **T**= thrift. Abbreviations for locations are:**ATL**=Atlanta; **BOS**=Boston; **CHI**=Chicago; **DAL**=Dallas; **DC**=Washington, D.C.; **LA**=Los Angeles; **MIA**=Miami; **NY**=New York City; **PHI**=Philadelphia. (1)— The bank reported consolidated data for 6/30/88. (2)— Data for 6/30/88 were revised since publication last year. (3)— In Oct. 1988, Banco de Vizcaya and Banco de Bilbao merged. Data for 6/30/88 are the combined data for the two former banks. (4)— Bank is also known as Swiss Credit Bank. New York branch is listed as Swiss Credit Bank. (5)— Deposits and assets for 6/30/89 include thrift acquired during the year. (6)— Owned by a group comprised of individuals; Venezuelan industrial companies; and Banco la Guaira International, Caracas. (7)— The bank—UBAF Arab American Bank, New York— is part of the Al UBAF Banking Group, Neuilly, France. (8)— Owned by three banks of the Audi Group. (9)— The bank is owned by five Philippine institutions. (10)— Owned by five European banks. (11)— A financial services holding company which owns Banco Popular Dominico, Santo Domingo. (*)— Office is in the foregn bank's "Home State". **Compiled by American Banker, Copyright 1990.**

Definitions and Data Sources

American Banker's study of foreign banking in the United States shows the business loans, deposits, and assets of the full banking offices of foreign banks in the U.S. as of June 30, 1989.

Full banking offices include commercial bank subsidiaries more than 50% owned, branches, agencies, Edge Act banks, and New York State investment companies, and thrift subsidiaries.

The sources of the data for this survey are: (1) the **American Banker** survey of each foreign banking offices in the U.S.; (2) the various **Federal Reserve Board** reports for these institutions purchased from the National Technical Information Service, U.S. Department of Commerce, Springfield, Va.; and (3) **ADP Data Services Division, New York.** ADP maintains a computer tape of the the Federal regulatory call reports. The ADP data base was used to identify the most profitable foreign bank-owned banks over the first half of 1989 and over the past five years.

According to the International Banking Act of 1978, **an agency** is "any office or any place of business of a foreign bank located in any state of the United States or District of Columbia at which credit balances are maintained, checks are paid, or money is lent, but at which deposits may not be accepted from a citizen or resident of the United States."

A branch is defined as "any office or any place of business of a foreign bank located in any state of the United States or District of Columbia thay may accept domestic deposits that are incidental to, or for the purpose of, carrying out transactions in foreign countries."

In New York state, a large number of agencies of foreign banks have been granted powers by the state to issue large-denomination deposits to both domestic and foreign residents. For that reason, *American Banker* follows the Federal Reserve Board's policy of classifying these agencies as branches. These agencies are listed in the branch listing and are identified by a footnote 'm" after their name.

The U.S. branches and agencies of foreign banks are required to submit to the Federal Reserve Form FFIEC 002: "Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks" on a quarterly basis.

An **Edge Act banking corporation** is a nationally chartered organization set up to engage in international banking and investment, under the rules established in the 1919 Edge Act. The International Banking Act of 1978 permitted foreign banks to establish Edge banking offices.

An Edge bank can make loans, accept deposits, and provide a wide range of banking services, but all of these must be directly related to foreign or international transactions.

An Edge bank is required to submit to the Federal Reserve Board Form FR2886B: "Report of Condition for Edge and Agreement Corporations." These are unconsolidated data for the Edge and for each domestic branch of the Edge.

An investment company, which is established under Article XII New York State banking law, is similar to a state-chartered commercial bank. However there are three major differences: (1) an investment company is not subject to the 10% lending limitation, while a commercial bank cannot lend to any one person an amount greater than 10% of its capital stock, surplus, and undivided profits; (2) an investment company has no restriction on investing in stocks of corporations, while banks cannot acquire the stock of any corporation; and (3) an investment company cannot accept deposits, but can only maintain credit balances incidental to the conduct of its lawful business. Only investment companies more than 50% owned by foreign banks are included in the listings.

An investment company is required to submit to the Federal Reserve Board Form FR2886A: "Quarterly Report of Condition for A New York Investment Company and its Domestic Subsidiaries."

The U.S. commercial bank subsidiaries of foreign banks are required to complete one of four forms— Form FFIEC 031-034— depending on the size of the institution and whether or not it has foreign branches. This report, entitled "Consolidated' Reports of Condition and Income," is generally referred to as the "call report."

Commercial and industrial loans are defined as loans for commercial and industrial purposes to business enterprises (proprietorships, partnerships, and corporations), whether secured or unsecured, single payment or installment. These loans may take the form of direct or purchased loans, such as commercial paper or bankers acceptances.

For commercial banks, data are consolidated, including these banks' domestic and foreign branches and their Edge bank subsidiaries.

To measure the U.S. banking operations of a foreign bank, the total business loans, deposits, and assets in each U.S. office of that foreign bank, including thrifts, are summed. To obtain the aggregate totals for all foreign banks, the data for all U.S. banking office of foreign banks— excluding thrifts— are summed.

Has Big Selloff Of Bank Stocks Been Overdone?

By NORA GREEN

ANALYSIS: *Follow-up on the news*

NEW YORK — When stock prices languish at depressed levels for an extended period, investors begin to wonder if the market is ignoring some fundamentals.

The banking industry, for example, would appear to be in severe trouble, if one judges by stock prices. Since the end of the third quarter, the Keefe, Bruyette & Woods Inc. index of large bank stocks is down nearly 19%, or more than five times as much as the market in general.

Judging from the lack of confidence of bank stock investors, the banking sector would appear to be in for severe trouble.

Certainly, some market analysts think the sell-off has been overdone or, at least, should not have been so indiscriminate.

Investors "have thrown the baby out with the bathwater" in indiscriminately selling bank stocks, said Hugh A. Johnson, chief investment strategist at First Albany Corp.

Concerns about shrinking interest margins and slipping asset quality are overblown, Mr. Johnson and others argue, and the worries do not reflect the strong fundamentals of some banks, even in the Northeast.

Similarly, Goldman, Sachs & Co. issued a bullish report on California banks last week, saying investors had sold off those stocks because of "exaggerated fears of an impending housing collapse." Goldman pointed out that California is not New England, and the economy and real estate market remain strong in the West.

Some Still Bearish

Nevertheless, some analysts are still completely bearish on banks. George Salem of Prudential-Bache Securities Inc., who recently downgraded the industry to "sell," said in his report that, over the last 20 years, "on a case-by-case basis, the fundamentals in banking have not been this weak."

Banks' problems are fundamental rather than cyclical, Mr. Salem said; but he added that the business cycle is not in their favor either – the current cycle is coming to an end, and earnings are expected to continue at a disappointing level through the first quarter. Mr. Salem suggested that "bottom-fishers" should

Midlantic Pushes CDs In Funds Bid

By YVETTE D. KANTROW

NEW YORK – Bidding aggressively for consumer deposits in a slowing economy, Midlantic National Bank has begun selling a certificate guaranteed to pay a minimum rate equal to the latest auction yield on two-year Treasury notes.

The Treasury CD, which the bank claims is the first of its kind, is indicative of Midlantic's growing appetite for consumer funds.

Midlantic, which recently extended its "Hungry Banker" corporate advertising theme to retail business, also introduced a nine-month Wait-and-See CD, which can be renewed upon maturity at its opening rate.

Competition for Funds

The moves reflect growing competition for retail funds in New Jersey. The products attract customers who are likely to establish other relationships through cross-selling.

"Everybody wants core deposits," said Keith J. Pilkington, a vice president in charge of marketing at the Midlantic Corp. subsidiary. "The New Jersey market seems to be aggressively priced these days."

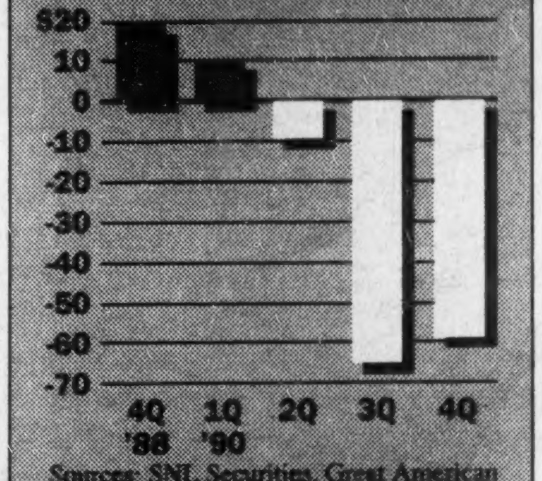
A Strapped Great American Seeks Ally on Capital Front

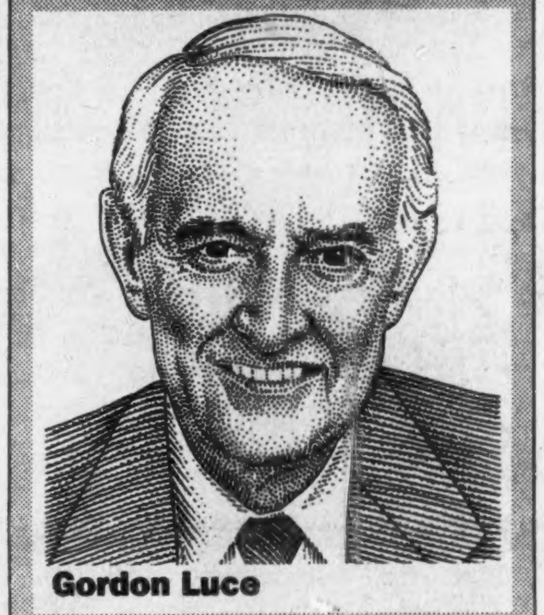
By PHIL ROOSEVELT

Mounting Losses At Great American...
Net income (dollars in millions)



Sources: SNL Securities, Great American

...Are Forcing CEO To Raise Capital



Gordon Luce

Barbara Kelly

NEW YORK — In the wake of mounting real estate problems in Arizona and other parts of the Southwest, Great American Bank disclosed on Monday that it may seek an outside investor to help it meet capital requirements.

San Diego-based Great American, which with $16.1 billion in assets is the nation's eight-largest thrift, also disclosed it would hire an investment bank to explore ways to attract direct investment or sell assets.

Gordon Luce, chairman and chief executive, said in a news release the thrift had "already received a number of inquiries from potential investors." Mr. Luce was unavailable for comment, and a spokesman declined to elaborate on the news release.

Stock Up 62¢ a Share

Speculation that all or part of the company could be sold contributed to a rise in Great American's stock, analysts said. Great American's stock closed at $4.375 a share, up 62.5 cents a share from Friday's close.

Meanwhile, Standard & Poor's Corp. downgraded the rating on about $75 million of Great American's debt, citing the thrift's exposure to the Southwest real estate market. The agency said the thrift's capital position and its "low reserve coverage" for sour loans "impair its financial flexibility, increasing the bank's vulnerability to regulatory operating re-

Deposit Insurance Reform Draws a Crowd

By ROBERT TRIGAUX

Some Key Proposals For Reforming Deposit Insurance

Group	Proposal
American Bankers Association	Maintain $100,000 level of coverage; eliminate "too big to fail" doctrine; make uninsured depositors and unsecured creditors suffer some losses of failed bank, based on weighted average of past FDIC losses.
Independent Bankers Association of America	Insure all deposits; assess premiums on foreign deposits of U.S.banks.
Conference of State Bank Supervisors	Maintain $100,000 ceiling; reduce premiums for banks with high capital levels and strong "Camel" ratings, provided that the FDIC's reserve is at least 1.25% of insured deposits.
Minneapolis Fed	Fully insure $10,000 worth of deposits; insure 90% of remaining deposits; allow one fully insured account per person.

WASHINGTON — As the deadline nears for public comment on deposit insurance reform, many segments of the banking industry have already weighed in with their proposals. So far, the American Bankers Association's idea seems to have the best chance on Capitol Hill, according to some financial and political experts.

The ABA proposal would protect small depositors while exposing large depositors to potential loss.

If that sounds like what the current system is supposed to do – it is. But since the collapse of Continental Illinois Corp. in 1984, regulators have spared large depositors from losses when a big bank fails – their so-called "too big to fail" doctrine. This blanket insurance is one of the key factors pushing reform of the system.

The ABA thinks that the insurance ceiling should remain at $100,000, but that all banks should be allowed to fail. Uninsured depositors and unsecured creditors would suffer losses, which would be determined by a formula based on the loss rate of the Federal Deposit Insurance Corp.

The Treasury Department closes its public comment period on deposit insurance reform this Friday and will begin an elaborate review, due out in a study next February, of how the insurance system can be changed for the better. Congress would have to approve any reforms.

Based on the variety of proposed reforms, "better" is in the eye of the beholder.

The Independent Bankers Association of America, which represents small banks, wants all deposits to be guaranteed, unless it is made clear that big banks will be allowed to fail.

Another proposal, from the Conference of State Bank Supervisors, would require banks to pay less in insurance premiums

COMMENT/*By Sanford Rose*

Is Your Bank Inefficient?

How does a bank know when it has a cost problem? Jon Moynihan, a managing vice president of the First Manhattan Consulting Group, lists some telltale signs.

The bank's ratio of noninterest expenses to assets is not declining relative to that of other banks with a comparable business mix.

It is feeling price pressure from competitors who may be operating with lower overhead.

It does not systematically reward those managers who come in under budgeted expenses and, equally important, systematically penalize those who exceed budgeted expenses.

It does not have a management information system that provides actionable data on, say, cost per transaction or cost per inquiry.

It does not manage its major cost centers (e.g., operations) as aggressively as it manages its major profit centers (e.g., wholesale lending).

And, finally, the principal stock analysts and its new hires from other banks view it as a "fat and happy" institution.

After a bank has determined that it has an overall cost problem, it must of course pinpoint the causes. Which areas of the bank exhibit subpar efficiency — the branches, wholesale lending, operations, the staff, or all of the above?

* * *

The bank may have a cost problem in its branches if:

(1) Branch expenses are greater than 230 basis points of liabilities.

(2) Part-time tellers constitute less than 20% of the total teller work force. (Increased use of part timers is of course one important method of paring outsize branch expenses.)

(3) There are no part-time employees on branch platforms.

(4) Branch staffing is determined by negotiation with branch managers instead of according to a model that reveals how many people are needed at given times of the day and given days of the week to handle expected traffic.

'Banks should adopt a "permanent revolution" approach to cost cutting.'

* * *

The bank may have a cost problem in wholesale lending if:

(1) Direct expenses in wholesale lending are greater than 70% of total expenses in that line of business.

(2) The wholesale-lending return on equity is below 15%.

* * *

The bank may have a cost problem in operations if:

(1) The line businesses keep complaining that their indirect costs are killing them.

(2) The direct cost of operations is above 35 to 40 basis points of assets.

* * *

The bank may have a cost problem in the staff if:

(1) Staff budgets are increasing faster than those of operations or the line businesses:

(2) The direct cost of staff is greater than 40 basis points of assets.

While not a foolproof guide to determining where to trim costs, the foregoing provides some useful benchmarks against which to measure cost performance in various parts of the bank.

Moynihan of FMCG advocates the "permanent revolution" approach to cost cutting. That is, banks should concentrate on reducing branch costs in year one, wholesale-lending costs in year two, operations expenses in year three, and staff expenses in year four. Then, beginning in year five, they should start the whole process over again. ☐

CRIME BLOTTER/*By Tom Leander*

Investigation Set On CIA Links to S&Ls

Rep. Frank Annunzio, D-Ill., chairman of a house panel overseeing financial institutions, has asked the House Intelligence Committee to investigate a newspaper's reports of alleged links between the Central Intelligence Agency and several failed thrifts.

In a letter sent last Thursday to Anthony C. Beilenson, D-Calif., chairman of the Permanent Select Committee on Intelligence, Mr. Annunzio said that he was at first skeptical of the reports, but has become convinced "that at least some of the allegations have validity." The charges were made in a series of articles last month in the *Houston Post*.

Frank Annunzio

Daniel Childs, spokesman for the House Intelligence Committee, said last Friday that an investigation "will start promptly" but a date has not yet been set.

Mr. Annunzio said in the letter that a former Justice Department prosecutor told a House Banking subcommittee staff member that agents from the Federal Bureau of Investigation instructed him to drop an investigation of an individual connected with a thrift failure because that individual had "CIA connections."

The *Houston Post* reported that the CIA effort to raise money for covert operations involved a number of schemes to siphon funds from 22 failed thrifts at the expense of the federal deposit insurance program.

The newspaper also reported that the CIA has intervened in criminal investigations of the S&L crisis.

Mark K. Mansfield, a spokesman for the CIA, said the agency would fully cooperate with the investigation. Regarding charges linking S&L fraud to financing for covert operations, Mr. Mansfield said, "They are not true."

* * *

Chicago Cracks Down On Financial Fraud

In a clear signal that Chicago prosecutors are getting tough on bank and thrift fraud, 36 people last week were charged in 23 cases of defrauding Chicago financial institutions of $1.8 billion.

The charges involve a wide range of schemes, according to Assistant U.S. Attorney Steve Miller.

In one case, 10 people were charged with conspiring to steal $43,000 in cashier's checks from Continental Illinois National Bank and Trust Co. of Chicago, now called Continental Bank. Four other cases involved fraudulent representations on loan applications. One case was a check-kiting scheme. Five of the cases involved sums under $100.

Winifred Crespo of Lemont, Ill., a Chicago suburb, was charged with two counts of embezzling a total of $566,000 – the largest amount cited in the sweeping round of indictments.

Prosecutors said Ms. Crespo stole $378,500 from a $400,000 line of credit at First Chicago Bank of Oak Park by submitting false information about her income and assets. Ms. Crespo allegedly claimed to have an annual income of $260,000 and to own $2.5 million of New York City real estate.

A spokesman for First Chicago Corp., parent company of the Oak Park bank, confirmed the report from the U.S. Attorney's office but declined to make any further comment.

In a second count, Ms. Crespo is charged with taking $187,500 from Buffalo-based Manufacturers and Traders Trust Co. from an unsecured note obtained by providing false information about her assets.

She fraudulently claimed ownership of $688,680 in stock and bonds and $1.9 million in New York City real estate to obtain a $250,000 note from the bank, according to prosecutors.

Ms. Crespo could not be reached for comment.

— **Nanine Alexander**

Kansas Judge Throws Book at Friendly Felon

An unusually courteous Kansas City man convicted of robbing thrifts in Kansas and Missouri was ordered by Judge Earl O'Conner last week to make $8,972 in restitution payments and sentenced to 37 months in prison.

Kevin Lee Newby pleaded guilty in November to robbing the First Federal Savings and Loan Association in Grandview, Mo., on Aril 24, and the World Savings and Loan Association in Lenexa on Aug. 9. Charges against Mr. Newby in connection with three other robberies were dismissed.

During the robberies, according to police, Mr. Newby used a toy pistol and and told some of the tellers to "have a nice a day." He even offered to send several of them bouquets of roses. ☐

LETTERS

Different View Of Gun Control

To the Editor:

I was disturbed to read a brief item in your Funny Money column on Feb. 16 ["Gun Lobby Takes Aim," page 4]. The item dealt with a petition urging gun control that was circulated by the Royal Bank of Canada. What disturbed me was that the *American Banker* article started with the statement: "Even when a bank tries to do a good deed, it comes under fire."

In the United States, that "good deed" would have been to outlaw the Second Amendment to the U.S. Constitution. Would you still have considered it a good deed if the petition had tried to outlaw the First Amendment?

Robert Leahy
Editor, The Leahy Newsletter
Tustin, Calif.

IMF, World Bank Assess Brady Plan

The staff at the World Bank and International Monetary Fund are assessing their respective roles in Treasury Secretary Nicholas F. Brady's plan to reduce Third World debt, in preparation for a thorough review next month.

Sources at both the World Bank and IMF stressed that their staffs are only preparing a progress report for presentation to their boards in April. But once this review is complete, the two institutions will begin reviewing adjustments and perhaps even alternatives to the Brady plan – depending on how the debt strategy fares in the progress report – for discussion at the World Bank Group's interim committee meetings in early May.

Many international bankers and economists have been critical of the debt-reduction deals negotiated thus far, arguing that Mexico achieved little real debt relief and that the Philippines got insufficient new money.

Moreover, they say continuing talks between the banks and other nations are getting nowhere, due to a fundamental inconsistency in the Brady strategy: Banks as a group cannot lend new money and simultaneously take a hit on old loans.

But U.S. Treasury and multilateral bank officials are more sanguine about the prospects of debt reduction. They point out that the centerpiece of the Brady plan is flexibility, allowing very different deals for very different constituencies of banks to emerge in Mexico, the Philippines, and Costa Rica.

Banks Try to Avert Peru Action

With only days to go before banks can legally foreclose on Peru's debts, the nation's bank advisory committee is working with Lima to forestall such an event.

Peru's bank advisory committee – led by Citibank – agreed to draft a so-called tolling agreement, which states that banks will not invoke the statute of limitations on loan agreements for a period of time. Without this, individual banks could seize Peruvian property or exports overseas for unpaid debts.

Peru is more than $1 billion in arrears on its $3.8 billion in commercial bank debt.

Argentine Status Worries U.S. Banks

Higher Reserve Requirements Seen if IMF Talks Fail

By ED PAISLEY
LDC Debt Report

NEWS ANALYSIS

WASHINGTON — The International Monetary Fund is unlikely to extend another loan to Argentina in the near future, and this has sparked concern among U.S. bankers that regulators this spring will mandate increased loan-loss reserves for commercial banks with exposure to the country.

Negotiations between Argentina and the IMF are continuing, but sources doubt that a credible Argentine economic reform package could be negotiated soon.

"I can't imagine the [IMF] staff would bring a proposal before the board," said one influential board member who spoke on condition of anonymity. "I don't see how they could justify a second tranche."

A Quarter of Debt

U.S. banks account for roughly a quarter of the $37.5 billion Argentina owes its banks. That includes the $5.8 billion in interest arrears on the loans.

The country's top U.S. creditors are Manufacturers Hanover Trust Co., Citicorp, Chase Manhattan Bank, J.P. Morgan & Co., Bank of America, Chemical Bank, and Continental Bank.

Argentina is meeting the interest payments on the $3 billion it owes the IMF and has an additional $1.2 billion in standby credit remaining at the agency.

If the IMF does not release a second tranche this month and fails to negotiate a new accord with Buenos Aires before May, Argentina's options under Treasury Secretary Nicholas Brady's debt-reduction plan may be limited.

This in turn could force U.S. bank regulators to compel banks to increase loan-loss reserves against Argentine assets.

Would Be Third Order

It would be the third time that regulators have ordered banks to either charge off or set aside special reserves for a portion of their loans to Argentina.

Last June, the Interagency Country Exposure Review Committee, a group of federal bank regulators who periodically review the creditworthiness of sovereign debt, ordered banks to be 20% reserved against Argentine loans. In December, the committee ordered banks to raise their reserves to 35%.

Banks have the option of charging off the percentage of the loan mandated by the committee or setting aside an equivalent amount in special loan-loss reserves, known as allocated transfer risk reserves.

The net result of either move is to reduce a bank's capital, since a bank uses its capital to cover its chargeoffs or to add to special reserves.

Frenchman Calls East Bloc Loans Too Risky

By JOHN EVANS

LONDON — In the strongest warning yet by a senior Western banker on the dangers of lending to Eastern Europe, the president of the French Banking Association declared that none of the nations – including the Soviet Union – can be trusted with loans.

"These countries are experiencing total revolution. And it is never easy to lend to people in a state of revolution," said the official, Dominique Chatillion, in a weekend interview with a French newspaper.

Western commercial banks should not give in to government pressure for lending to Eastern Europe, Mr. Chatillon said. "You don't know who you are lending to, the state apparatus is collapsing, and we haven't yet seen appropriate institutions capable of managing credit risks being set up."

None of the Eastern European governments undergoing radical reform have "set up or even started to set up economic and judicial structures to handle inflows of significant sums of money," Mr. Chatillon said.

The French banker said pressure from government authorities was largely to blame for the rash of risky bank loans to the Third World starting in the 1970s onward.

"We must learn from our previous experiences. . . . It's difficult to compare the Soviet Union and Brazil. But in some ways, the Soviet Union is worse," Mr. Chatillon said. "At least in Brazil there were economic institutions which worked to a certain extent."

$100 Billion in Debt

Mr. Chatillon is the latest in a series of Western bankers to express reservations over lending to Eastern Europe. Including the Soviet Union, Eastern European nations already owe Western banks nearly $100 billion.

The Bank of Montreal Ltd.'s new chairman and chief executive officer, Matthew W. Barrett, has said the financing of lesser-developed nations, including those in Eastern Europe, will have to be undertaken by governments in the industrialized nations.

While Western banks can be the "vehicles for funding" on behalf of governments, they will not extend the financing themselves, Mr. Barrett has said.

Sir Kit McMahon, chairman of Midland Bank PLC, which has the biggest LDC exposure among British banks, said in recent testimony before the British Parliament that Western nations may have to offer guarantees to entice banks into providing new financing. □

Bankers Unfazed By Credit Card Due from AT&T

By YVETTE D. KANTROW

NEW YORK — While many bankers expect American Telephone & Telegraph Co. to succeed in launching a general-purpose credit card this year, most view it as a threat they can manage – and hope they are not guilty of wishful thinking.

Fresh in bankers' memories is Sears, Roebuck and Co.'s Discover card.

The banking industry did not take Discover seriously when it was unveiled five years ago. Today, with 33 million cards in circulation, Discover is viewed as a viable competitor that is making major inroads into one of banking's most profitable businesses.

ANALYSIS: *Follow-up on the news*

But the AT&T venture will be different, bankers and industry observers say.

Because AT&T is expected to arrange with one or more financial institutions to issue MasterCard and Visa cards – and not introduce its own, Discover-like brand – bankers say they can limit the telecommunications company's inroads.

To be sure, few bankers doubt that AT&T will be able to steal some market share from bank card issuers and from American Express Co. The telecommunications giant has deep pockets and has lured away some highly regarded bank card executives to head its new card operation.

Calling Cards Widely Held

Forty million people already carry cards issued by AT&T enabling them to charge long-distance phone calls. And perhaps most important, the Basking Ridge, N.J., company has a billing infrastructure that lets it reach almost every household in the country.

But many bankers say that AT&T's success will depend on its customers' loyalty.

"It's not like they are offering a pink Cadillac that nobody else has," said C. Richard McMahan, a vice president at First Union National Bank, Charlotte, N.C.

Visa Has Call Charging

A Visa card that allows customers to charge their long-distance phone calls is already offered by US Sprint – a product that many say can negatively affect AT&T's potential.

In addition, People's Bank, Bridgeport, Conn., teamed up with Southern New England Telephone Co. last year to offer a MasterCard that also is a telephone calling card. And MCI

Regulators' Best-Laid Plans Wither

Lack of Bidders Stymies Big Sale Of Texas Parcels

By STEVE KLINKERMAN

DALLAS — Setting an ominous precedent for the Resolution Trust Corp., federal regulators have abandoned efforts to sell about $400 million of real estate properties in a single "bulk sale" transaction.

An official of the Federal Deposit Insurance Corp. said the agency canceled the sale after deeming the only two bids unacceptable. The assets packaged for the bulk sale included most of the real estate holdings of the former Federal Asset Disposition Association, an agency created by the defunct Federal Home Loan Bank Board.

Experts say that if the RTC is not able to make the bulk-sale concept work, it could be forced to sell its properties piecemeal. The agency ultimately must dispose of $100 billion of assets from about 600 failed thrifts.

"The failure of the FADA bulk asset sale is another factor that works against the success of the RTC," said Brian Smith, the former chief counsel for the Comptroller of the Currency.

Resolution Trust Corp. officials could not be reached for

Seidman Proposal to Inject Funds Into Ailing S&Ls Wins Support

By ROBERT M. GARSSON

WASHINGTON — In an effort to reduce the number of thrifts they have to seize, federal regulators are seeking the authority to keep some capital-deficient institutions open by pumping government funds into them.

The idea, floated on Capitol Hill several weeks ago by Federal Deposit Insurance Corp. Chairman L. William Seidman, is winning support at the Office of Thrift Supervision.

Darrel Dochow, director of OTS's Office of Supervision Operations, said the plan offers a quick, low-cost approach that could keep up to 100 institutions from going to the Resolution Trust Corp., which is having difficulty dealing with the 337 thrifts already in its caseload.

To be sure, the proposal faces a number of hurdles. It still has to win approval from the Bush administration, which has not begun to evaluate the plan. And the idea is sure to be compared with the "open-thrift assistance" policy that put regulator M. Danny Wall under fire.

But the proposal is a clear signal that regulators are searching for better ways to handle the thrift cleanup. Just Wednesday, the government had another setback when a federal judge issued an injunction preventing the seizure of a Illinois thrift that challenged key aspects of the thrift bailout. (See story on page 13).

How U.S. Might Aid Troubled Thrifts

Regulators are discussing the possibility of nursing sick thrifts back to health without seizing them. Such an effort might:

- **Be directed by the Office of Thrift Supervision.**
- **Allow the government to infuse capital equal to 5% of a thrift's assets.**
- **Reduce pressure on the government to seize weak S&Ls.**
- **Allow existing management to remain in place.**
- **Wipe out shareholders.**

The plan to assist thrifts would let them operate normally until buyers can be found.

Preserving Franchise Value

By keeping thrifts out of the RTC, the workout agency created last year to dispose of insol-

Banks Binging Despite Realty Hangover

By BARBARA A. REHM

WASHINGTON — Despite growing red ink from real estate lending, the banking industry is still pouring money into that business, according to federal regulators.

"Real estate lending continues to fuel the industry's expansion," L. William Seidman, chairman of the Federal Deposit Insurance Corp., said Wednesday at a press conference on the banking industry's recent performance.

Real estate lending at 12,000 commercial banks in the fourth quarter grew 12.8% from a year earlier, according to data released by the FDIC. By contrast, all assets grew by 5.4%.

The increased lending came as many banks, particularly in the Northeast, boosted reserves for possible losses on real estate credits.

For the year, realty loans accounted for more than half of the industry's $168 billion net increase in assets.

Overall, the industry earned $2.7 billion in the fourth quarter, about half of what it earned in the 1988 period, but far better than the third quarter's $700 million loss. For the year, banks earned $16.3 billion, about 40% less than 1988's earnings of $25.5 billion.

The Comptroller of the Currency, which also released industry statistics Wednesday, pegged real estate as the main cause of weakness among national banks in the Northeast.

During 1989, nonperforming real estate loans jumped to $9.1 billion from $3.6 billion at Northeastern banks, the Comptroller said. Earnings were weakest at national banks in the region. For the year, national banks there reported earnings of $919 million, compared with $6 billion in 1988.

Real estate lending growth is concentrated in the Far West and Southeast, the FDIC said. The six states with the biggest increases in real estate lending are California, Washington, Oregon, Nevada, South Carolina, Florida, and Delaware.

With the exception of Dela-

COMMENT / *By Stephen H. Axilrod*

As Germany, Japan Tighten, Our Markets Will Feel Pinch

Monetary authorities in the United States, Japan, and Germany have a common objective – control of inflation – but they each face widely different domestic circumstances. These differences affect not only the timing and pace of actions taken in home markets but also the extent to which those actions affect foreign markets.

Recent developments in Japan and Germany, particularly in their bond markets, might be described as an attempt by participants to guard against further rises in inflation. At 7% and 9% respectively, long-term interest rates in Japan and Germany have risen to where they are quite high relative to their current inflation rates of 2.5% to 3% a year.

In both countries, however, there are fears of higher inflation. In Germany this is largely because of the impact of currency unification with the eastern sector. In Japan it is due to a combination of tight labor markets, rising oil prices, and excess liquidity.

The high interest rates also reflect the considerable, though not insurmountable, economic and political difficulties to be faced as Eastern Europe and Russia shed their oppressive communist carapace and attempt to integrate more into the European and world economies.

The economic integration of Western Europe could even be delayed. This would impede potential productivity and efficiency gains, as politicians divert their focus more to questions of political security raised by the new, more fluid European scene.

All of these circumstances, actual and potential, led to the sharp rise of longer-term interest rates in Germany and Japan, even though monetary authorities have thus far taken no additional restraining action this year. While long-term rates in those two countries now look high – even preemptively high, in real terms – they have not yet reestablished the market's earlier faith in their economies.

If the market had been fully convinced that these countries were succeeding in adjusting to potential economic difficulties, their currencies should have been rising on exchange markets. This is particularly so because both Germany and Japan have huge international payments surpluses, a traditional source of currency strength.

Decline of the Mark and the Yen

In recent weeks, the yen has shown a disturbing tendency to decline in value, even though the election outcome was supposed to herald a period of greater political stability. And the West German mark has lost strength as the potential inflationary implications of German unification have sunk into market thinking. Substantial official dollar sales in foreign-exchange markets have been required to stem the decline in the mark and the yen.

If the currency declines cannot be stopped and reversed through foreign-exchange intervention, the countries will be faced with the need to encourage further interest rate increases through official domestic market action. The odds on that occurring seem better than even at the moment. In Japan, that will be at the peril of further drops in the stock market.

The stability of the dollar on exchange markets means that foreign monies have continued to move toward the United States on balance. Because of this movement, U.S. domestic markets have not been buffeted as much as might have been expected. Our stock market has not responded to the recent substantial weakness in Tokyo.

Dollar Is Still the Safest Refuge

Partly that's because our market has been more realistically valued since October 1987. It also indicates that, in times of uncertainty, the liquidity and underlying strength of U.S. markets tend to insulate them to an important degree from untoward events abroad.

Such reasoning should not be carried too far. A further substantial effort to combat inflation abroad will probably be felt in the United States in weakening bond, stock, and exchange values of the dollar.

In the United States, weak corporate profits suggest monetary restraint is taking hold, even though consumers continue to spend a bit more than the authorities are comfortable with. Under those circumstances, a substantial further tightening, whether initiated here or abroad, could well be climactic. In the United States it would bring interest rates back down later this year; as that becomes apparent, it would cushion the stock market. ☐

THE LOBBYISTS / *By Barbara A. Rehm*

4 Lobbying Groups Join on 'Laundering'

When Rep. **Frank Annunzio,** D-Ill., introduced the Depository Institution Money Laundering Amendments of 1990, the industry's response was unequivocal.

Frank Annunzio

It hates the idea.

Mr. Annunzio wants to pull an institution's charter if it is found guilty of permitting money laundering. Four trade groups have joined forces to oppose the bill.

In a letter last month, **Edward L. Yingling** of the **American Bankers Association, James B. Watt** of the **Conference of State Bank Supervisors, Kenneth A. Guenther** of the **Independent Bankers Association of America,** and **Mark J. Riedy** of the **National Council of Savings Institutions,** told Mr. Annunzio that his bill could foster the industry's worst nightmare: runs by depositors.

"If a depository institution were charged with money-laundering offenses, depositors would almost certainly lose confidence, resulting in runs on the institution because of the threat of automatic charter revocation and institution closure," the letter said. "These 'runs' could be expected after the first news stories about the charges, even if the charges were eventually found to be groundless by the courts."

The House Banking Committee's financial institutions subcommittee, of which Mr. Annunzio is chairman, is considering the bill today. Reps. **Thomas R. Carper,** D-Del., and **Bill McCollum,** R-Fla., may offer an amendment that would remove mandatory charter revocation and leave the issue up to regulators.

* * *

Consumer Bankers Fret over Sallie Mae

The **Consumer Bankers Association** is complaining about competition from the **Student Loan Marketing Association,** a government-sponsored agency.

In a letter last month to Sen. **Claiborne Pell,** D-R.I., chairman of an education subcommittee, CBA president **Joe Belew** said Sallie Mae is planning to offer $170 million in loans to graduate and professional students at certain universities.

Sallie Mae, he said, is skimming the cream off the student-borrower pool.

"They've got an unfair funding advantage," Mr. Belew said this week to explain his group's opposition to the government-sponsored entity's entry into the student loan lending business. Sallie Mae was created to provide a secondary market for student loans.

"The commitment of funds by Sallie Mae to these two programs is seen as coming at the expense of secondary market serices to traditional lenders serving a broader spectrum of students," CBA's letter stated. Graduate and professional-student loans have larger balances and are repaid more frequently, it noted, making such loans more attractive.

Ross Kleinman, a Sallie Mae spokesman, rebutted CBA's charges. "Everything we are doing ... is perfectly consistent with our enabling legislation, so we don't have to go back to Congress to undertake this program," he said.

* * *

Home Builders Find Ally on Loan Ceilings

Credit the **National Association of Homebuilders** with keeping the loans-to-one-borrower debate alive.

Home builders claim that their credit is drying up as the provisions in the thrift-bailout law kick in. The law forces thrifts to adhere to national bank lending limits – meaning that total lending to any one borrower is capped at 15% of an institution's capital. Thrifts formerly could lend up to 100% of capital to a single borrower.

Carroll Hubbard

The home builders' champion on Capitol Hill is Rep. **Carroll Hubbard,** D-Ky.

Tuesday, he began circulating a "Dear Colleague" document asking other lawmakers to sign a letter to Treasury Secretary **Nicholas F. Brady** and **President Bush** requesting "a regulatory transition period" for the new lending rule.

The Brady-Bush letter, which Mr. Hubbard plans to send Friday or early next week, explains that such a transition would avert the need to reopen the thrift rescue – something no one in the administration or on the Hill seems eager to do.

The House Banking Committee's oversight and investigations subcommittee, of which Mr. Hubbard is chairman, held a hearing on the issue Feb. 7. The Treasury Department refused to testify, but **P. Allan Schott,** chief counsel for the Comptroller of the Currency, showed up to tell lawmakers that he will not ease national bank lending limits. Mr. Schott added that he does not think his agency has legal authority to declare a transition period for thrifts.

Mr. Hubbard countered that regulators, even the Comptroller, have declared such periods when regulations were changed.

"Cannot the same discretion and flexibility be applied to the regulation of thrift institutions?" a draft of Mr. Hubbard's letter asked. "We would appreciate it if you would take a personal interest in reviewing this matter carefully with a view to implementing clear grandfathering for existing loans and a transition period for new loans."

Easing thrift lending rules is the home builders' main lobbying goal. So with members in town for a legislative affairs conference this week, the trade group dispatched them to the Hill on Tuesday to persuade their legislators to sign on to Mr. Hubbard's letter. ☐

Banks Are Binging on Real Estate Loans Despite a Hangover of Mounting Losses

Continued from *page* 1

ware, all those states are in the two regions of growing concern by regulators – the West and the Southeast.

But Mr. Seidman warned against jumping to conclusions, even though banks in the Southwest and Northeast have already taken heavy losses on real estate loans. "I don't see any major trend at this time," the FDIC chief told reporters Wednesday.

In contrast to the real estate lending increases in the West and Southeast, banks in the Southwest have cut way back. Texas and Arizona recorded declines of 12% and 15%, respectively, in the amount of real estate loans made in 1989. Likewise, real estate growth was among the lowest in the country at banks in Massachusetts, Rhode Island, and New Jersey.

Real estate lending accounted for more than half of the industry's $168 billion net increase in assets last year.

Arizona Is No. 1

But the Southwest and Northeast still lead the country in noncurrent real estate loans. Arizona leads the nation with almost 12% of real estate loans more than 90 days past due or not accruing interest, the FDIC said. After Arizona come Texas with 10.3%; Massachusetts, 6.9%; Connecticut, 6%; Alaska, 5.3%; Oklahoma, 5%; Louisiana, 4.8%; New Hampshire, 4.4%; and New York, 4%.

Of the 10 largest banks, five recorded losses on the year, mainly because of chargeoffs on loans to foreign countries. The fourth quarter's $9.2 billion in chargeoffs and the year's $22 billion set records, the FDIC said. Mr. Seidman applauded the bullet biting and said he thought banks were adequately covered on foreign loans.

Domestic Losses Covered

Banks also socked away a record amount of money to cover domestic loan losses in the quarter. Banks, mainly in the Northeast, set aside $8.4 billion to cover future domestic loan losses.

Mr. Seidman said he was not worried about an economic slowdown causing extensive losses in the banking industry. However, the FDIC's report states: "If economic conditions deteriorate, loans to highly leveraged commercial borrowers could add to credit losses and recovery in the Southwest would be dealt a setback."

Mr. Seidman said the $14 billion bank insurance fund could lose about $500 million in 1989. He said the number of bank failures should decrease in 1990 from the 1989 tally of 206. □

World Business Atlas Published for Women

NEW YORK — Women's World Banking, an international association fostering access to financial services for women, is issuing an "Atlas of Global Trade," a 365-page guide to business practices in 38 nations.

The atlas, to be published in March and updated annually, includes information on licensing, customs, and internal taxes; a glossary of trading terms; and a list of international governmental financial institutions. Funded in part by the U.S. Agency for International Development, it is available for $25 from Women's World Banking, 104 E. 40th St., Suite 607, New York, N.Y. 10016. □

State-by-State Look At Real Estate Lending

Ranked by nonperforming loans on Dec. 31, 1989

Suit May Cause Loss at Sunrise

Reuters

ROSEVILLE, Calif. — Sunrise Bancorp. said that the settlement of a pending lawsuit against the company may cause it to report a loss for 1989.

Sunrise said its reserve for claims against the company is not adequate to cover the known and expected losses connected. The amount will be added to Sunrise's reserves and charged to its operations results in the fourth quarter.

Because of an anticipated substantial increase in income taxes due to the addition to its reserves, the company said it may report a loss in 1989.

Before the effect of the anticipated charge against operations, Sunrise said, the company had a record income before taxes of $4.118 million for 1989.

The lawsuit related to alleged unauthorized withdrawals from pension and profit-sharing deposit accounts maintained at Sunrise Bank. The accounts were administered by a local pension fund administrator who has been charged with embezzling funds from pension plans he controlled. □

Suit over Wall Viewed Seriously By Thrift Office

By TOM LEANDER

NEW YORK — A federal judge's decision to consider motions on a lawsuit challenging the constitutionality of the appointment of M. Danny Wall as the nation's top thrift regulator could set back the government's efforts to clean up the thrift industry, banking lawyers say.

"If the suit is successful in its broadest implications, the results would be absolute chaos," said Cantwell F. Muckenfuss III, an attorney in Washington for the Los Angeles law firm of Gibson, Dunn & Crutcher.

ANALYSIS: *Follow-up on the news*

David Roderer, an attorney at the New York office of Jones, Day, Reavis, and Pogue, said, "The Office of Thrift Supervision is taking it very seriously because it can undo everything they've done."

U.S. District Judge Royce Lamberth on Wednesday issued a temporary restraining order against the Office of Thrift Supervision, temporarily barring the agency from taking any action against Olympic Federal Savings and Loan Association, Berwyn, Ill. Judge Lamberth said he will hear motions on Tuesday for a preliminary injunction.

Olympic Federal, with $1.1 billion in assets, has been struggling to stay afloat under the capital requirements imposed as a result of the thrift bailout law signed last August. The thrift maintained that the OTS was preparing to seize it, but an attorney for the agency said Thursday that a decision had not yet been made.

Edward O'Meara, an attorney with the OTS, declined in a telephone interview to discuss the merits of Olympic's case.

Senate Did Not Confirm

Lawyers for Olympic argued in the suit that the appointments of Mr. Wall and Salvatore Martouche as directors of the OTS were unconstitutional because they were not confirmed by the Senate. Therefore, lawyers for the thrift argued, all of the agency's policies and regulations issued under either man are unlawful.

Mr. Martouche became interim director of the OTS on Tuesday, replacing Mr. Wall, who stepped down at the same time.

Lawyers for Olympic also argued that the thrift's application for open bank assistance as allowed under the thrift bailout law was still pending, and therefore the OTS couldn't take any

House Panel Dilutes Penalty For Laundering Convictions

By ROBERT M. GARSSON

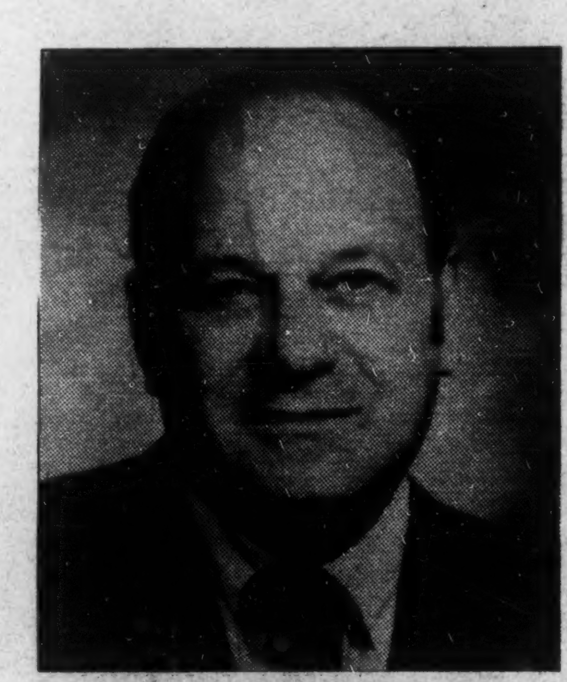
WASHINGTON — To the relief of banks, thrifts, and credit unions, a House Banking subcommittee on Thursday watered down a proposed measure that would have automatically revoked the charters of institutions convicted of money laundering.

Instead, the bill reported out of the financial institutions subcommittee gives regulators discretion to decide whether an offense was sufficiently serious to warrant revoking a charter or placing an institution in receivership.

Financial lobbyists, along with some lawmakers, were concerned that the original bill, introduced by the panel's chairman, Rep. Frank Annunzio, D-Ill., was written so broadly that an institution could be stripped of its charter if an employee were convicted on laundering charges.

Hearings Required

Under the approved measure, regulators would be required to convene a hearing to consider revoking an institution's charter if both the institution and more than one officer or director were convicted on money-laundering charges.



Rep. Frank Annunzio

State-chartered institutions whose charter is beyond the reach of the federal agencies would lose their deposit insurance.

Similar legislation was introduced in the Senate Thursday by Sen. John F. Kerry, D-Mass.

The American Bankers Association's chief lobbyist, Edward L. Yingling, said the compromise approved Thursday is a big improvement over the original

S&L Outsider Expected To Be Named To OTS Post

By BARBARA A. REHM
and ROBERT M. GARSSON

WASHINGTON — The Bush Administation plans to name Timothy T. Ryan Jr., a Washington lawyer who served on the President's transition team, as director of the Office of Thrift Supervision, administration sources said Thursday.

The selection of Mr. Ryan, a virtual unknown to the thrift industry, comes as a surprise. His name was not among the many raised publicly as possible successors to M. Danny Wall, who resigned last Dec. 4.

Mr. Ryan was the Labor Department's top lawyer in the early 1980s and served as the general counsel for the Reagan/Bush transition team in 1988. He is a partner with the Washington office of the law firm Reed, Smith, Shaw & McClay.

Administration sources said late Thursday afternoon that an

Bankers Say IBM Ready to Test Imaging System

By RICHARD LAYNE

NEW YORK — IBM is expected to announce on Monday that its long-awaited image-processing system for checks is ready for testing, according to bankers who helped develop the system.

Scheduled to go live at the end of the year, the system could substantially reduce the cost of processing checks and improve customer service, the bankers said.

Security Pacific Corp. has said the system could save it as much as $50 million over five years.

IBM is also expected next week to unveil a personal-computer-based system for corporate lenders that is designed to link loan information with customer profitability analysis, according to executives at other computer companies.

First Attempt Failed

IBM created an imaging system for check processing in the mid-1970s, but the product failed, with only one bank installing it. The new system has been in the works for the past year and is expected to be unveiled at a technology confer-

NCNB Led Industry Last Year With 99% Rise in Market Value

By KELLEY HOLLAND

NEW YORK — Asset size, earnings, and credit quality are key measures of a bank's status, but what warms the hearts of many bankers is a rapidly growing market capitalization.

By that measure, Hugh McColl, chief executive of NCNB Corp., had to be the happiest banker in America in 1989.

The total value of the Charlotte, N.C.-based banking company's outstanding common stock almost doubled last year, to $4.7 billion. The 99% increase, by far the largest in the industry, came on the heels of a 61% increase the year before, according to data supplied by SNL Securities.

Measure of Purchasing Power

A bank's market capitalization is the price of its stock multiplied by the total number of shares outstanding. It represents the market's assessment of the bank's value and its ability to make acquisitions. The greater a bank's market capitalization,

COMMENT / *By Janet Gray*

Titles, Titles Everywhere No Longer Serve a Purpose

Banks have always been an easy target for critics wanting to decry hierarchy and bureaucracy. And few would disagree that those have been characteristic of banks. Being such an old industry, banking has had a long time to acquire venerability, tradition, and, not incidentally, too many layers of management, a strict chain of command, and small spans of control.

But just as banks are eschewing tradition in favor of innovation, they are revamping their organizations to be more competitive. Some banks have aggressively downsized, others have experimented with centralization, decentralization, matrix structures, and dividing along functional, product, market, and geographic lines, back and forth. Banks will continue to look at their structures for ways to be ever more streamlined.

There's one remnant of bureaucracy that no bank has addressed: titles. Hierarchy is actually built into banking titles. Banks have traditionally rewarded performance and longevity with titles rather than with money. For a long time, prestige has been a substitute for responsibility. Everyone has a title.

"Title inflation" is a catch phrase for the proliferation of titles: When there are too many vice presidents, banks create "first" vice presidents, then "senior" vice presidents, and so on.

Now, of course, banks have become as competitive as any industry in their compensation and career opportunities. But the titles remain. It seems like a little thing, but it's not, really. There are some insidious problems built into the title structure and nomenclature.

One problem is that the titles have become meaningless. "Vice president" usually has some relationship to the office of the president, and in most industries is awarded fairly stingily. When there are hundreds and even thousands of vice presidents, what force does the title carry? Where is the achievement?

A more important problem is the hierarchy that is implied in these titles. It hampers flexibility and responsiveness to changing conditions. How can a first vice president report to an assistant vice president? It just isn't done. But organizational requirements change. And maybe what the assistant vice president is doing has become more important, strategically, than the first vice president's area of responsibility. Psychologically, the bank is stuck. It can't break the implicit hierarchy.

How About 'Manager Of'

Nowadays, compensation is competitive, careers paths are exciting, flexibility is crucial. Clearly, titles have outlived their usefulness. Why not, then, banish all corporate titles in favor of functional titles that better describe what the managers actually do? Change all the titles to "manager of" and suddenly the organization's structure, deployment of human resources, and working relationships can be viewed in a whole new light.

Functional titles can more easily be moved around in a reorganization. The manager who would suffer a loss of face if stripped of a title, or forced to report to someone with a "lesser" title, could probably live with the strategic decision to move a function under another function that has become important. There is no personal implication in such a move.

Focus on mission-related work can be improved simply by keeping the name of the group in the forefront. Instead of being one of hundreds of vice presidents, a manager can take pride in being the sole manager of his or her area of expertise. Perhaps the uniqueness would encourage the manager to make that group the best it can be.

To Encourage Participation

Some of the trappings of titles would fall away fairly quickly. Imagine a meeting of the vice president of marketing, the senior vice president of retail banking, the assistant vice president of cost accounting, and the product manager to discuss the introduction of a new product. You can guess who will do the most and who the least talking.

Contrast this with a meeting of the managers of marketing, retail banking, the product, and cost accounting. This is a meeting of equals. As manager of an important function, each will be expected to contribute to and participate in the discussion and decision-making. No one can dominate by virtue of an irrelevant title.

There are other bonuses. For one thing, studies show that meaningful participation can result in increased productivity. And titles are expensive nowadays! Whereas in the past titles were given in lieu of monetary rewards, today not only does an increase in base salary accompany a promotion in title, but the standard benefits also increase, not to mention the perquisites of the executive titles, such as cars, car phones, executive services, and so on.

Wire-Security Report Is Termed Inaccurate

To the Editor:

The article in your Feb. 22 edition ["GAO Study Pinpoints Gaps in Wire-Transfer Security," page 1] was misleading and inaccurate insofar as it dealt with the Clearing House Interbank Payments System.

The GAO study said Chips controls were "relatively strong." With respect to the three very minor items the government auditors noted, the report said two were fully corrected and the other was in progress toward correction prior to the time the report was issued.

FUNNY MONEY / *By Tom Leander*

Keep 'em Quaking

Hugh L. McColl

NCNB Corp. chairman and chief executive Hugh L. McColl has a voracious appetite for rival banks, one of the reasons he is among the most feared men in banking today.

Mr. McColl did nothing to dispel that image at the Montgomery Securities Financial Institutions Conference in Newport Beach, Calif., last week. Asked after a presentation why the company's Southeast banking network does not include Georgia, Mr. McColl replied, "It's not for lack of trying" – a not very veiled reference to his hostile bid last year for Citizens and Southern Corp., Atlanta.

After a pause, Mr. McColl continued, "There are only two people in the United States who will take my telephone calls: [Federal Deposit Insurance Corp. Chairman] Bill Seidman and [Federal Reserve System banking supervision director] Bill Taylor."

— Sam Zuckerman

Acrimonious Acronym

Karen Shaw

Amid the swirl of groups promoting reforms to the deposit insurance system, one constituency is missing – the depositor. The result, says Karen Shaw, executive vice president of the Institute for Strategy Development in Washington, is that depositors' interests are not well represented in the insurance debate.

"Perhaps we need a group like the Depositors of America," she suggests, but cautions that its acronym may prove prophetic: DOA.

— Robert Trigaux

* * *

Unfashionable Slip

Henry Kravis, chief of Kohlberg Kravis Roberts & Co., may be renowned for his skills as a leveraged buyout artist. But a New York audience made it clear on Tuesday that he might reexamine his gifts as a humorist.

Mr. Kravis was addressing a luncheon sponsored by the Financial Women's Association at the posh Rainbow Room restaurant in Rockefeller Center. As an opener to his speech, Mr. Kravis said that he wished his wife, fashion designer Carolyne Roehm, could be present.

"She could have gotten up and talked about what's probably of much more interest – fashion." he said. The mostly female audience immediately broke into a round of hisses and boos.

Shortly after the speech, Mr. Kravis told a group of reporters that he was sorry he made the comment.

* * *

Another Fine Mess

Manufacturers Hanover's name appeared in a half-page ad run by the East Orange Municipal Court in the Newark, N.J., *Star-Ledger* last month. The ad included the bank in a list of car owners whose vehicles had racked up more than 50 unpaid parking tickets. The bank and 49 other scofflaws had until Feb. 21 to pay.

The Manufacturers Hanover car had 98 $20 tickets, says Esther Martinez, a clerk at the East Orange court. As of Wednesday morning, no one had come forward with the money.

Bank spokesman John Meyers says the car was leased from Wheelease, the bank company's car leasing subsidiary in Hicksville, N.Y. "Just one of our customers who racked up a lot of parking tickets," said Mr. Meyers.

He added that payment of the tickets is "his headache, not ours."

No Lease on Plant Life

John Grundhofer

It's no secret in Minneapolis business circles that John F. Grundhofer, First Bank System Inc.'s new chief executive, has arrived at his job with a set of pruning shears.

The latest cost-cutting anecdote making the rounds concerns a budget-slashing move on the bank's office plants. With the exception of some plants in public reception areas, the greenery leased from a local nursery for corporate offices has been returned, a spokeswoman confirmed.

While the total cost saving wasn't available, the spokeswoman said that in the Twin Cities area alone the bank will save about $90,000 a year.

Mr. Grundhofer, she added, has said he would buy his own office plants.

S&L Loan Patterns Uneven

Some Institutions Buck Downward Trend

By PHIL ROOSEVELT

NEW YORK — While thrifts have pulled back from mortgage originations in the wake of the bailout law, the magnitude of the retreat varies markedly from thrift to thrift.

Some thrifts, in fact, have been posting big gains in loan volume.

The most recent regulatory data show that originations by the top 50 thrifts in the field rose just 1.4% during the third quarter of 1989, compared with the first quarter. By contrast, total originations by all types of lenders rose 15%, with commercial banks emerging as particularly strong, reported the Department of Housing and Urban Development.

(The originations of the top 50 thrifts during the third quarter cannot be compared with originations a year earlier, because regulators did not disclose originations data until 1989).

The relatively weak originations of the top 50 reflects a widely discussed pullback by the thrift industry as a whole. Thrifts have become less aggressive in originations to curb asset growth and meet the capital-to-assets mandates of the bailout law signed last August. Thrifts, which favor adjustable-rate mortgages, also have been hurt by increased demand for fixed-rate loans.

But some S&Ls, such as San Francisco-based First Nationwide Bank and Newport Beach, Calif.-based Household Bank managed to post increases of more than 100%.

"We've made a very concerted effort in mortgages in the past couple of years," said a spokeswoman for Household Bank. She added that the thrift meets all capital requirements and can gain additional financial support from its parent, Household International.

Even some thrifts that suffered declines last year are now boosting their originations.

Los Angeles-based Home Savings of America, the nation's largest thrift, reported record originations in January and February, with each month's volume slightly exceeding $1 billion. In February 1989, Home originated $894 million of mortgages.

Although California home sales have been cooling, Home has been doing a brisk business in refinancings, targeting homeowners who want to convert some home equity into cash.

Some thrifts have been bucking the trend of declining originations by selling their new loans rather than holding them. Cleveland-based TransOhio Savings Bank, which generally sells all of its originations, boosted its production 58% from the first quarter to the third.

Still, six of the top 10 thrifts in originations posted drops between the first and third quarters last year.

"We intentionally cut back our loan production last year," said Robert Adelizzi, chief executive of HomeFed Corp., San Diego. "We were controlling our asset growth to keep our capital in line, so we can take advantage of acquisition opportunities that the consolidation of the industry is going to present."

Great Western Bank, Beverly Hills, Calif., was the top thrift in originations in the third quarter, though its total was off 25% from the first quarter. The unit of Great Western Financial Corp. says its first quarter was unusually high. ☐

Fannie Mae Buys Balloon Loans With 2-Step Feature for Portfolio

The Federal National Mortgage Association, which last year met with surprising success buying and securitizing balloon-payment home loans, is now supporting a variation.

Fannie Mae this week began buying "two-step" mortgages, which carry one rate for seven years and then adjust automatically to another rate for the next 23 years. Aimed at borrowers who do not expect to keep their homes for long, the loan carries an initial interest rate lower than those on traditional, fixed-rate, 30-year mortgages.

The agency is buying the two-step loans for cash and holding them in its portfolio. But it may eventually offer to securitize them for lenders, a spokesman said.

Similar to Balloon Loan

The new loan is similar to Fannie Mae's seven-year balloon loan, which emerged as one of the hottest new mortgages of 1989. The balloon can be readily "extended" after seven years, as long as the borrower's payments are current and interest rates have not soared.

This week, Fannie Mae's pricing allowed lenders to offer both loans at about 38 basis points below the rates for traditional fixed-rate mortgages.

In the future, however, one loan or the other may periodically enjoy a pricing advantage, Fannie Mae officials said. And borrowers may view the two-step loan as less risky than the balloon, since the new product guarantees that financing will be available after seven years.

Offering Both Types

Some lenders that offered the balloons are adding the two-step mortgage. "We're going to hold them both out and see who rallies where," said Ken Portz, a senior vice president California Federal Bank, Los Angeles.

Because an active market exists for securities backed by balloon loans, lenders may soon be able to offer those loans to consumers at rates slightly below those for the two-step mortgage, Mr. Portz added.

Fannie Mae began a securitization program for balloons last October, after launching a purchase program in July. The rival Federal Home Loan Mortgage Corp. began supporting a similar type of loan in November.

Fleet Uses Loan Rebates To Cross-Sell

Fleet/Norstar Financial Group Inc., which has taken the wholesale mortgage market by storm, is now trying to boost its retail originations.

As part of that plan, the Providence, R.I.-based holding company this week launched a loan program aimed specifically at increasing originations at its eight commercial bank units, which are located in New England and New York State.

1% of Loan Goes to Borrower

The Cash Back Mortgage Plan offers rebates of 1% of the loan amount to borrowers who keep their loans for at least five years and make automatic monthly payments through a Fleet/Norstar checking account.

Designed to encourage borrowers to sign up for other Fleet/Norstar services, the program is similar to one launched last year by Security Pacific National Bank, Los Angeles.

"This is an effort to activate our banks more heavily in the mortgage lending process," said Andrew Woodward, president of Fleet/Norstar's mortgage unit. It "fits with our overall effort of trying to increase direct originations," he added.

Fourth-Largest Originator

In 1989, Fleet/Norstar produced $9.4 billion of mortgages, up from $5.4 billion in 1988. That made the company the nation's fourth-largest originator, according to *Inside Mortgage Finance,* a newsletter.

But only about 30% of last year's total came through retail sources; the rest represented loans purchased from other lenders in the wholesale market, the company said. Mr. Woodward estimated that the eight banking units accounted for 15% of all retail originations, with a nationwide network of mortgage offices handling the rest.

Mr. Woodward said there are no plans to cut back on wholesale production. But he said the company would like to boost retail production, by an unspecified amount, as way to add stability to overall originations.

The stipulation that borrowers hold the loans for at least five years also gives Fleet/Norstar more certainty about cash flows from the mortgages. The company sells its originations but earns fees by servicing the loans.

"The five years gives us some stability in the servicing portfolio," Mr. Woodward said.

CAPITAL

Growing Market Capitalization Gives Banks Clout as Acquirers

Continued from *page* **1**

the stronger it can be as an acquirer.

Market capitalization does not always reflect a bank's asset size. Indeed, some of the banks with the largest market capitalization are far from the top of the list in terms of asset size.

For example, Banc One Corp.'s market capitalization of $4.2 billion exceeded Chase Manhattan Corp.'s $3.9 billion at year end, but Chase had four times the assets of Banc One.

Bankers love to see their market capitalization growing, said Mark Lynch, an analyst at Bear Stearns & Co. because "it gives them more power to go out and buy other banks."

Overall, the market capitalization of the largest 50 commercial banks grew 21% in 1989 to about $116 billion, slightly less than the 23% increase in 1988. Last year's rise came after a roller-coaster ride that saw bank stocks strengthen in the first three quarters of the year, before beginning a steep plunge in autumn.

Despite a tepid mid-February rally, the fall in bank stock prices has continued, eroding banks' market strength. Since the start of the year, the Keefe Bruyette & Woods index of 24 major bank stocks is off 6.4%.

Indeed, NCNB, whose stock was down $2.25 at noon on Thursday after some analysts reduced earnings estimates, suffered a decline in market capitalization to $4.365 billion from $4.682 billion at yearend (see related market story on page 16).

Other Big Gainers

Trailing NCNB, the big gainers for 1989, according to SNL Securities were First City Bancorporation of Texas, up 85.4%; BankAmerica Corp., up 72.0%; First Hawaiian Inc., up 66.9%; and U.S. Bancorp, up 64.0%.

In contrast, ballooning real estate problems turned Bank of New England Corp. into the year's biggest loser, down 57.4% to $649 million in market capitalization. Among the other big losers were the bank's Boston neighbors, BayBanks Inc., down 31.1%, and Bank of Boston Corp., which fell 17.5%. Also among the big losers were First Bank System Inc., down 18.6%, and Midlantic Corp., off 17.2%.

Citicorp continued to be the bank with the greatest market capitalization, following a 13.6% growth in value in 1989 to $9.377 billion. J.P. Morgan & Co., held on to second place, rising 27.9% to $8.084 billion.

But BankAmerica's strong surge enabled it to jump from sixth to third place, displacing Security Pacific Corp. which fell to fourth. NCNB vaulted to fifth place from 14th in 1988.

Wells Fargo & Co., which had been fifth in 1988, dropped to ninth place last year, while PNC Financial Corp., dropped from fourth place to eighth over the same period.

Key to NCNB's Success

It was just this growing strength that NCNB used to outbid competitors for the failed First RepublicBank Corp., with its strong Texas franchise and about $20 billion in assets. NCNB picked up a 20% stake in 1988 and completed the acquisition in 1989, issuing new common last year to help pay the $1.4 billion tab. But investors hardly blinked at any potential dilution.

"A lot of people looked at the acquisition in Texas as a great deal at first," said Joseph Berry, executive vice president at Keefe, Bruyette & Woods. "After they looked at it a little, it seemed even better."

Investors' positive view of the undertaking grew as NCNB Texas National Bank began to produce strong earnings growth. Moreover, the value of the tax benefits in the transaction was more quickly realized as NCNB increased its ownership more swiftly than planned.

The next biggest gainer after NCNB in 1989 was Texas' recapitalized First City Bancorp., which posted an 85% increase to $669 million in market capitalization. Initially, said Brent Erensel, senior banking analyst at Donaldson, Lufkin & Jenrette, First City's investment banker, "investors had little confidence in Texas or in the prospects for the recapitalization." But First City produced earnings that outpaced investor expectations, and the Texas economy began to improve.

BankAmerica, continued its resurgence with a hefty 72% increase to $5.626 billion in market capitalization in 1989. Strong earnings pushed the bank's book value up sharply, and the stock price followed, according to Joseph Arsenio, an analyst at Hambrecht & Quist. "The bank had a tremendous return on equity," he said.

On the down side, Bank of New England, with all of its well-publicized troubles, experienced a 57.4% decline in market capitalization. As problems mounted in its commercial real estate loan portfolio, its stock price declined sharply from a 1989 high of $24.375 to finish the year at $9.375, for a market cap of $649 million.

With Bank of New England stock trading today around $4.50, the market cap for the company today is about $312 million. That is a drop in market cap since yearend of 52%.

* * *

Great American Bank announced it has retained Shearson Lehman Hutton Inc. to assist it in raising needed capital. A spokesman for the bank declined to specify how much capital the thrift planned to raise. Great American's stock was trading Thursday at $4.25, up 50 cents for the week.

Great American announced Monday that it may seek an outside investor to help it meet capital requirements. □

Choice of Ryan Brings OTS Fate Into Question

By ROBERT M. GARSSON

WASHINGTON — In nominating T. Timothy Ryan to be director of the Office of Thrift Supervision, President Bush may have been looking for a dependable caretaker of an agency not destined for a long life.

A Washington lawyer with ties to four Republican administrations, including the current one, Mr. Ryan has little background in financial services.

But he is regarded as a strong manager, someone who could keep the OTS out of political trouble until next year, when the administration and Congress are expected to decide if they want to abolish the agency, as is being proposed in some quarters.

ANALYSIS: *Follow-up on the news*

"I think that's where they're headed," said Kenneth Guenther, executive vice president of the Independent Bankers Association of America, alluding to the caretaker theory.

Mr. Guenther said it is likely Congress will consider legislation next year to abolish the OTS. The agency was created last year by the Financial Institutions Reform, Recovery, and Enforcement Act to take over the regulatory functions of the Federal Home Loan Bank Board.

News that Mr. Ryan would be tapped to succeed M. Danny Wall came only days after the administration announced that Treasury official Salvatore Martoche would serve as interim director. The quick reversal is raising questions on Capitol Hill about the administration's attitude toward the thrift agency, which is part of the Treasury Department.

No Rubber Stamp

One Senate Banking Committee staff member indicated that Mr. Ryan will face sharp questioning at his confirmation hearing.

"People are going to want to know why he is the most qualified person, why it has taken so long to find someone, why a partisan person for a job that cries out for nonpartisanship," this staffer said. "And they are going to want to know what the administration's long-term intentions toward the OTS are."

Richard Peterson, a senior aide to Rep. Doug Barnard, D-Ga., described the succession of appointments to the OTS director's post as a "triple shuffle" that reflected confusion in the White House.

Home Loan Bank Floats Plan To Bypass '1 Borrower' Cap

By BARBARA A. REHM

WASHINGTON — The Federal Home Loan Bank of Dallas is floating a solution to one of the thrift industry's thorniest problems – the limits placed on the amount of loans an institution can make to any one borrower.

The Dallas bank wants to syndicate, and take an ownership position in, the portion of thrift loans that exceed the lending limits, according to an outline of the plan obtained by the *American Banker.*

Thrifts are under much tighter lending restraints since last summer's bailout law forced them to adhere to the limits on national banks. Whereas thrifts used to be permitted to lend up to 100% of capital to any one borrower, they are now capped at 15% of capital or $500,000, whichever is higher.

Profitable Loans Barred

The "loans to one borrower" issue has become a rallying point for healthy S&Ls and some of their borrowers, mainly home builders, who argue that the bailout law is having the perverse effect of barring thrifts from making profitable loans to creditworthy customers. The loans most affected by the lending limits are residential construction and development loans.

George M. Barclay
Dallas Home Loan Bank

Under the Dallas bank's proposal, being circulated in Washington and among Home Loan bank presidents, a bank would take 10% of loan amounts exceeding the caps as an investment and sell the remainder to other financial institutions.

As an incentive to purchasers, the Dallas bank would put a letter of credit behind the syndicated loans, which would limit buyers' risk in the event the loan is not repaid.

For example, if a thrift made a $1 million loan and kept just $250,000, the Dallas bank would

RTC Reduces Cash Needed To Acquire S&L Assets

By ROBERT TRIGAUX

WASHINGTON — In the latest of a series of moves to spur sales of thrift assets seized by the government, the Resolution Trust Corp. Oversight Board Friday reduced the down payment required on real estate transactions.

The reduction, to 15% from 25%, should invigorate flagging interest in sales of real estate – including hotels, houses, and apartment buildings – from 337 insolvent thrifts in government conservatorships.

In a similar attempt to boost sales, the board late last month said the RTC could allow buyers of assets to return any unwanted portion for up to a year. The initial warranty period had been six months.

Capital Infusions Weighed

Under informal consideration is an "open thrift assistance" plan to allow the RTC to infuse undercapitalized thrifts still in operation with government funds in the hope of selling them

Banks Lobbying To Ease Rule On Check Holds

By KAREN GULLO

NEW YORK — Regulation CC, the controversial rule limiting the holds that banks place on deposited checks, is again prompting intense lobbying by banking trade groups.

The lobbyists are seeking changes in the rule to allow deposits in automated teller machines to be treated differently than conventional deposits. Bankers want to be able to delay payment on certain interbank ATM deposits, allowing more time to make sure they are backed by sufficient funds.

Bankers Limit Their Target

In focusing on the ATM provisions, the bankers are pursuing a much more limited agenda than they did in an all-out effort two years ago to oppose most aspects of the rule, which was mandated by the Expedited Funds Availability Act of 1987.

Unlike in the earlier battle, the banking groups have the Federal Reserve Board – the agency charged with enforcing the law – on their side in asking

NCNB Shares Battered 2d Day In Reaction to Loan-Loss News

By NORA GREEN
and KENNETH CLINE

Shares of NCNB Corp., a market favorite for much of last year, fell sharply in extremely heavy trading for the second consecutive day on Friday. The decline was triggered by the company's announcement Thursday that its problem loans could rise by 25% in the first quarter.

By Friday's close, shares of the Charlotte, N.C., banking company were trading at $41.50, down $2.125. More than 2.1 million shares had changed hands, almost seven times its normal trading volume.

During the last month, NCNB had been staging a mild rally, but the two-day drop brought its shares close to its Jan. 30 low of $40.875. NCNB traded at $52.50 on Sept. 29, before bank stocks began their slide.

On Thursday, management told securities analysts about the expected increase in problem loans and $180 million of unrealized bond-portfolio losses. NCNB's stock fell $1.75 in heavy trading as Merrill Lynch & Co. and Sanford C. Bernstein & Co. slashed earnings estimates

COMMENT / *By Paul S. Nadler*

Indicator of Service Quality: How Workers Treat Each Other

Bankers generally agree that the public wants quality service rather than top rate or lowest cost in a banking relationship.

In this regard, I always quote the comment attributed to John Glenn, the astronaut, when asked what it was like in that space capsule: "All I could think was that there were 852 moving parts, each of which was built by the low-cost bidder."

I have refined this to Nadler's Law No. 2: "You can't pay the customer top dollar and give him kisses, too, and he'd much prefer the kisses."

The Personal Touch

The customer is more interested in a bank that corrects errors quickly, that makes speedy decisions on loan requests, and that knows you personally than in a bank with top savings rates or lowest loan and service charges.

"Quality of service" has become a somewhat trite term. Everyone uses it. But what does it mean, beyond correcting errors swiftly, making quick decisions, and knowing the customer personally?

Addressing the Minnesota Bankers Association's latest Senior Bank Management Conference, Phillip Hudson, executive vice president of First Security Bank, Salt Lake City, spelled out the quality issue in far more specific terms than usual.

Mr. Hudson made the following points:

- A bank must provide a statement that is simple for the customer to understand. I remember the Chemung Canal Bank of Elmira, N.Y., which reported that people would rather pay a higher service charge, in the form of a lump sum subtracted montly from their accounts, than lower charges that are complicated and make it hard to balance the statement.
- Employees must be well informed. If employees don't know the bank's services, how can the public be expected to learn about them? Here, Mr. Hudson suggested sharing good results with the staff. If their perceptions of the bank are not tops, how can they give the public a tip-top impression? And such impressions are the keys to public satisfaction.
- People want the attention of the banker they are facing. If the manager who is handling your business waves at everyone who walks by, you feel slighted. If the tellers talk among each other while you are at the teller's window, you feel ignored. "Any customer not being served is your customer if you are not busy with someone else," Mr. Hudson summed up.

But the key to quality service, as the Minnesota bankers were told, is the way employees treat other employees. For if staff members are treated poorly, they will not treat customers well. Service centers must treat the branches as though they are outside customers.

As I was addressing an awards dinner at BankAtlantic in Fort Lauderdale, Fla., on the topic of bank service and morale, the only spontaneous applause arose when I said each bank division should treat queries from other divisions with the same respect afforded customer queries.

Interaction with the Public

How can a bank go about developing quality service? Mr. Hudson's answer was simple: "Training is expensive, but ignorance costs more."

But in addition to training employees, management must find out for itself how well employees are handling the public.

- Call a branch and see how the call is handled. This can let managers find whether people identify themselves, are knowledgeable, and act as if they care.
- Check on vendors who work directly with the public. How is a request for checks handled by the printing company? Are coupons intelligible? Check landscaping, bank cleanliness. A poor janitorial service can hurt the bank as much as a sloppy statement.
- What is the response when people close accounts? Here is your opportunity to find out which bank operations and policies makes people unhappy.

In this regard, I have closed accounts – including five at one bank in one day – without ever getting a survey letter or telephoned query.

Customers Getting Even

Stew Leonard, the grocer mentioned in the book "Excellence," says that when people get mad, they just stop shopping with you. You have no way to find out what made them mad. Bankers have the opportunity to investigate and correct the things that caused the defection. Yet few use this opportunity.

Mr. Hudson defines "quality of service" as "meeting customer expectations." And perceptions in this regard are as important as performance.

But just as advertising a bank's stature can impress the staff as well as the public, if a bank wants to generate a perception of quality service, it must start by rewarding performance, giving good training, and generating "quality" internally. ☐

Mr. Nadler is a contributing editor and professor of finance at Rutgers University's Graduate School of Management.

"SOUND OFF"

A recent survey conducted by the Gallup Organization and commissioned by Fidelity Investments found that 34% of eligible consumers said they would invest money in President Bush's proposed Family Savings Account. The Bush initiative would allow families and individuals to invest a set amount tax-free – a potential windfall for the nation's banks. Suzanne Christy of the American Banker features staff, asked:

Q *How will you take advantage of the Family Savings Account if it becomes a reality?*

■ Joan Greitzer
Vice president, product design
Society National Bank, Cleveland

I was encouraged by the results of the Gallup survey. We've viewed the Family Savings Account as a wonderful opportunity ever since it was proposed.

We have a couple of products we've been working on in the last few months. They should fit well with some of our existing package-type accounts that combine credit and deposit needs. We are also looking at altering some of our time deposit accounts.

The first two groups we would target this type of account to would probably be the general mass market and the emerging affluent, as well as a portion of our upscale market. It all depends on what point in the family cycle the consumer is; is he or she planning for education or retirement or home purchases?

This is all highly theoretical, of course. It depends on what kind of regulatory restrictions are placed on the accounts and what kind of reporting will be required of banks and consumers.

■ Russell S. Hoadley
Vice president
Barnett Banks Inc., Jacksonville, Fla.

We are very definitely interested in offering such a product – if permitted. We are watching what Congress is doing. A savings plan like this could be a source of stable deposits in the future.

We don't have any plans under way yet. But we could turn around a new product fairly quickly – our technology, marketing, and distribution structure is in place – if and when we know what the legislation will look like.

One of the issues we are looking at is if this account would really increase savings, as the President intends. Or would it simply create a transfer of funds from different accounts? Our sense is that, as we see the baby boom bulge moving into middle age, there is going to be a strong natural inclination to save.

■ Joseph T. Grause Jr.
Senior vice president
Fidelity Investments Institutional Services Co., Boston

The results from the survey, which Fidelity Investments commissioned, were not surprising. If people are given the opportunity to put money away in a tax-free way, they will. Right now, the tax laws incite people to borrow money, not save.

As a vendor of services to the banking industry – we help them market, manage, and sell Fidelity mutual funds – the Family Savings Account will be a boon. The banking industry is in a unique position to capture an increased share of both deposit and security-type products. Our perspective would be helping them merge those deposits with longer-term instruments like mutual funds.

While we don't have any plans to launch any whiz-bang new fund or service, we would spend more promotional dollars to help banks market existing funds under an IRA-type program.

Just look at history. In the early '80s, when restrictions on tax-free IRAs were less stringent, there was a great burst of mutual fund sales. Given the popularity of mutual funds and CDs last time around, we'd put our energy there.

Six years ago, we were aggressive in the market, and if legislation is passed, we'd be there again.

■ Nancy Eberhardt
Vice president, retail products
Central Fidelity Bank, Richmond

We are looking at a number of different scenarios to see what it would take to make a Family Savings Account profitable. I think we have a very big market that would be interested in some kind of long-term savings vehicle. While now they tend to be big credit users, they will be incited to save when they realize the tax benefits.

The product can probably be structured like a savings account, almost like a CD. Each would have a unique term. It all depends on the disclosure rules. There are a whole lot of alternatives. It also can look a lot like an IRA. But it will probably look most like a CD.

I don't think a Family Savings Account type of product will pull money away from other products. For example, even after we offered money market accounts, we still kept a strong base of people who wanted our traditional savings product. ☐

Wall Street and Thrift Industry Reduce PAC Contributions

By AMY SUZANNE KING

WASHINGTON — Cash that only a few years ago flowed freely from several sectors of the financial world into the coffers of political action committees has slowed to a trickle, according to data released by the Federal Election Commission.

With the dwindling numbers of savings and loan institutions and rampant cost-cutting on Wall Street, the decline in political contributions from these areas is not surprising, according to industry spokesmen.

Decline at U.S. League

Contributions to the campaign fund of the U.S. League of Savings Institutions, for example, decreased nearly 30% – about $92,000 – during the last two-year election cycle, ended in 1989.

But shrinking numbers of savings institutions are not the only reason for the reduction in receipts, according to James Grohl, a spokesman for the U.S. League of Savings Institutions.

An increase in the number of statewide and single-institution PACs means that political contributions have become less centralized, reducing the direct clout of the U.S. League. Consequently, the national fund has suffered a decline, Mr. Grohl said.

"Maybe the myth that we grease Congress with tens of thousands of dollars will be dispelled by this recent study," Mr. Grohl said.

Among the top 50 political action committees in the election commission's report, the American Bankers Association's BankPac showed the greatest increase in receipts since 1987. Disbursements increased by nearly $150,000 during the two-year cycle. In 1989, the PAC reported almost $800,000 in political contributions.

Decline Felt on Wall Street

The downward trend in financial PAC contributions carried over to many Wall Street firms.

The Better Government Committee of the New York brokerage firm of Smith Barney, Harris Upham & Co. showed a decrease in both receipts and disbursements. Receipts dropped nearly 70%, and disbursements declined about 65% between 1987 and 1989.

Much of the decrease in contributions to political campaigns, as documented by the commission, can be attributed to the fact that 1989 is not an election year. But the decline in receipts from Wall Street is probably due to recent uncertainty and instability in the financial markets, according to Henry Harris, treasurer of the Smith Barney PAC.

"Receipts are all through voluntary contributions," said a spokesman for Smith Barney. "I would guess that people feeling the pinch won't contribute – it's leaner and meaner."

Mr. Harris confirmed this analysis by adding: "Levels of trading activity are down, and consequently people don't feel as ebullient. That reflects on voluntary contributions."

Another Wall Street firm, Morgan Stanley & Co., argues that its PAC is as strong as ever. Despite a record year in earnings, contributions to the Morgan Stanley PAC decreased.

"The decline is a result of political activity as opposed to financial status. It's not an election year," said Peter Roche a spokesman for the company.

One of the powerhouse PACs, organized by the National Association of Realtors, also showed a decline in both receipts and disbursements during the last two-year election cycle, according to the election commission's report.

But with receipts totaling more than $2.7 million, the PAC for real estate agents was far and away the top financial services money earner.

The nearly $450,000 decline in receipts from 1987 to 1989 is probably a result of reduced contributions from states suffering real estate market slumps, according to Norman Flynn, president of the National Association of Realtors.

Who Gets the Money

The decrease in disbursements is a result not only of a nonelection year but also of changes in the way the group determines how to disburse the funds.

"Too often we were straddling the fence and contributing to both candidates," Mr. Flynn said. "As a result, we have and will be making fewer dual campaign contributions."

Ms. King writes for the Medill News Service.

Among the Top 50 Financial PACs in 1989...

Who collected the most

National Association of Realtors	$2,700,000

THE WEEK ahead

MONDAY, MARCH 12

The Supreme Court and the Senate are in recess until next Monday.

Senate Minority Leader Robert Dole, R-Kan., addresses credit union executives as the National Association of Federal Credit Unions kicks off its 1990 congressional caucus. On Wednesday, the group will hear from M. Danny Wall, who stepped down last week as director of the Office of Thrift Supervision. 202-646-4416.

TUESDAY, MARCH 13

Retail sales figures for February are released by the Commerce Department.

WEDNESDAY, MARCH 14

The Federal Deposit Insurance Corp. holds a rare public hearing on its proposal to eliminate pass-through deposit insurance coverage by thrifts to so-called 457 plans, employee benefit programs affecting workers in state and local governments. 202-898-6993.

The House Banking subcommittee on financial institutions begins a series of oversight hearings on the Financial Institutions Reform, Recovery, and Enforcement Act. Abolishing the Office of Thrift Supervision will be among items considered. 202-226-3280.

The Federal Reserve Board releases the "beige book" in which the Fed staff makes assesses the prospects for the economy that the Federal Open Market Committee will use in deciding whether to change the Fed's conduct of monetary policy. Fed watchers do not expect any easing by the Fed in the near future. 202-452-3000.

The FDIC meets to discuss the priority for bids on failing banks, and entrance and exit fees for deposit insurance funds. 202-898-3813.

The Resolution Trust Corp. meets to consider guidelines for disposing of real estate. 202-898-3604.

The House Banking subcommittee on consumer affairs and coinage votes on bills to strike two medals. 202-225-4247.

Business inventories and sales figures for January are announced by the Commerce Department.

THURSDAY, MARCH 15

The House Banking Committee continues oversight hearings on last year's thrift-bailout law.

FRIDAY, MARCH 16

Housing starts and building-permit figures for February are released by the Commerce Department. □

INSIDE the agencies

Credit Union Regulator Touts Insurance Fund

In the wake of criticism concerning its insurance fund, the National Credit Union Administration has released a detailed study touting the strengths of its system – a system it says could provide a blueprint for streamlining the banking industry's insurance fund.

The credit union regulator was instructed to prepare the study for the Treasury Department under the Financial Institutions Reform, Recovery, and Enforcement Act passed last summer by Congress.

Responding to Critics

"There is much misinformation about the insurance fund. I hope that it will be a document that will answer all of the questions raised," said Elizabeth Burkhart, vice chairman of the credit union administration.

Prepared by two NCUA executives, the study states that the National Credit Union Share Insurance Fund is much stronger than the funds set up to protect bank and thrift depositors.

$2 Billion Fund

The study notes that the $2 billion fund could withstand a catastrophic loss without passing the cost along to taxpayers because, to raise additional money, credit unions would kick 1% of their insured deposits into the fund. The study made a number of other points:

- The fund should not be separated from the regulator because the insurer couldn't place enough "financial discipline" on the market.
- Credit unions are less risky than banks because nearly half of their portfolios are in consumer loans.
- Credit unions will move into the 1990s with higher capital levels and lower losses.

Sowing for the Future. NCUA officials are planting the seed of a credit union movement in Eastern Europe. A delegation from Poland's Solidarity union met with administration officials last week for a first-hand lesson on the insurance fund and examination techniques.

The concept of a financial institution owned and controlled by citizens is appealing to Poland because the country has largely lost confidence in its centralized banking system.

Mrs. Burkhart of the NCUA spent part of a day with three members of the delegation, including Andrzej Krajewski, an adviser to Poland's vice minister of finance.

The groups discussed the credit union administration's structure, how the board operates, and why it is made up of people from two political parties. Members of the delegation also wanted to know how regulations are made and how disagreements between credit unions and examiners are resolved.

Said Mrs. Burkhart, "You learn a lot from what people ask. There were so many questions."

Waiting for a Ring. Robert M. Fenner, general counsel for NCUA, might want to compare notes with the Maytag repairman who spends much of his time waiting for the phone to ring. The regulator plans to install a fraud hot line by month's end for people to call if they suspect fraudulent activities in credit unions.

"We are hoping that it will help us uncover those occasional incidences of fraud in credit unions," Mr. Fenner said. "The incidences are very small, but they can be very expensive."

He pointed out that the two largest losses suffered by the insurer in the past decade resulted from fraud and have cost the insurer $65 million.

If a tip comes in, the matter is referred to the regional office and the examiners begin an investigation.

Mr. Fenner, however, won't suffer from ennui. "We will be doing lots of others things while we wait," he said.

The hot line is 202-682-9699 for calls in the Washington area and 800-827-9650 for long-distance calls.

— Bill Atkinson

Annuity Sales: Just One Round In a Long Fight

By YVETTE D. KANTROW

ANALYSIS: *Follow-up on the news*

NEW YORK — A recent decision by the Office of the Comptroller of the Currency that would allow national banks to sell fixed-rate annuities is an important victory for the banking industry. But it is only one battle in what may prove to be a long and drawn-out war.

Many banks are already devising plans to add fixed-rate annuities – investment contracts that guarantee fixed future payments – to their product lines. By selling annuities for insurance companies, bankers say they can offer their customers a popular tax-deferred investment vehicle and significantly increase their fee income.

But other bankers are holding off on their efforts, saying there are too many legal, regulatory, and competitive issues that must first be resolved. The Comptroller's decision applied initially to only one bank and is not an official regulation. Other regulations and laws might still prevent national banks from offering annuities.

"There are a lot of legal issues and it gets really complicated," said James Anderson, president of Northern Trust Brokers Inc., a subsidiary of the Northern Trust Corp. in Chicago.

The Comptroller of the Currency said last month that brokering fixed-rate annuities is not an insurance activity but more akin to the sale of a financial instrument such as a certificate of deposit, and therefore permissible.

Bank Gets a Letter

The regulator took that position in a letter to the Goodhue County National Bank in Red Wing, Minn. The $150 million-asset Goodhue said that since Minnesota state-chartered banks were able to sell annuities, national banks had to be able to do the same to stay competitive.

While bankers elsewhere hailed the Goodhue ruling, it does not grant the entire industry permission to jump into the $90 billion fixed-rate annuities market.

"It's nice that we have the [Comptroller's] blessing but we still need the state law to change," said James Daniel, president of Barnett Brokerage Inc., a subsidiary of Barnett Banks Inc., Jacksonville, Fla. Florida is one of 15 states that prohibit bank employees from being licensed to sell insurance. Bankers in these states are hope-

LDC Debt Market Facing Oversupply of Latin Paper

By JOHN EVANS

LONDON — Prices of Third World debt, already quoted at substantial discounts, are likely to drop further as banks rush to reduce their holdings because of the impending closing of a major market maker here, traders said Tuesday.

Libra Bank Ltd., the third-largest market maker in LDC debt and a specialist in Latin America, announced late Monday that it would close by the end of this year because the 10 banks that own it have refused to inject new capital to allow the bank to meet tougher Bank of England guidelines on LDC reserves.

"Libra Bank's impending dissolution will cause market makers to liquidate their existing long positions, thereby increasing immediate supply and causing prices to fall," a spokesman for J.P. Morgan & Co. in London, the largest market maker in LDC debt, said. Loss of a major market maker will also impair the liquidity of the market, other traders said.

Discounts Are Large

Major U.S. banks use the so-called secondary market to buy and sell billions of dollars in Third World loans. The loans are sold at large discounts to face value – that is, amounts significantly lower than their principal.

The size of the discount depends on the financial health of the debtor country. Argentine debt, for example, sells at about 10 cents on the dollar, Mexican debt at 40 cents, and Yugoslav debt at about 56 cents.

Once a bank has sold a loan, it can deduct the full amount from its balance sheet, draw down its reserves to cover any loss on the

Rating Firms, Stung Once, Crack Down In Southeast

By KELLEY HOLLAND

NEW YORK — Having failed to anticipate the severe deterioration in the credit quality of New England banks, the major debt-rating agencies are taking a tougher look at banks in the Southeast and other parts of the country.

The debt ratings of two Southeast regional banks were downgraded last week, and analysts think more downgrades could be in the offing.

"The mood the rating agencies are in, I don't think anybody's safe," said Ann Robinson, a vice president at Donaldson, Lufkin & Jenrette.

Costs Are Increased

Besides being a black eye in the investment community, a ratings reduction increases a bank's funding costs, particularly in jittery markets such as today's, when investors demand significantly higher interest rates on securities of less than sterling quality.

The agencies are focusing on

Bank Cards Looking Overseas for Growth

By YVETTE D. KANTROW

NEW YORK — The changing economies of Eastern Europe, China, and other parts of the world are increasing the resolve of the international bank card associations to look beyond their usual marketplaces.

As growth in the U.S. credit card market slowed in recent years, MasterCard and Visa set their marketing sights on Western Europe, which is still seen as a major growth area. But now their interest in lesser developed, farther-flung corners of the world is on the rise.

The payoff is already becoming evident, based on data from the recently published MasterCard International annual report. While the United States continues to account for most MasterCard activity, U.S. sales volume grew only 12% last year compared with 71% growth in Asia, 56% in Latin America, and 24% in Europe, where the opening of the Communist economies is just beginning.

A Shift to Overseas Operations

"Having won the right to political self-determination, it is only a matter of time until the people of Eastern Europe will also seek the passport to greater economic freedom that the payment card represents," H. Robert Heller, a Visa executive vice president, told credit card executives at a gathering in Florida last week.

Quoting from a recent issue of the *The Nilson Report,* a newsletter published in Los Angeles, Mr. Heller said that in 1995, 61% of the world's charge volume will be generated overseas, compared with 50% today.

Mr. Heller, an international economist who left a seat on the Federal Reserve Board last summer to join Visa, urged his listeners to look for business opportunities in Eastern Europe, Asia, and Latin America.

Restructuring at MasterCard

In addition to signing on new members in countries as diverse as Czechoslovakia, China, and Brazil, both MasterCard and Visa are signaling their interest in new markets with restructurings of their own.

MasterCard last month spun off its regional divisions into

COMMENT/By Laura A. Brevetti

Thrift Law Changes Rules On Subpoena Compliance

Dramatic changes in the area of grand jury secrecy law affecting customer notification procedures are a key element of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989.

Financial institutions receive grand jury subpoenas, issued in connection with a wide variety of criminal investigations, directing the production of bank records or testimony from its personnel. Receipt of the subpoena is often the first and only notice a bank gets that an investigation is afoot involving undisclosed criminal activity, the nature of which the bank has no knowledge.

Yet the thrift-bailout law now imposes on banks a presumption of knowledge or, at the very least, a duty to learn. A bank and its personnel face possible criminal prosecution for disclosing information to customers and others relating to subpoenas issued in connection with any investigation of certain financial crimes. Because of this change in the law, banks need to rethink their subpoena compliance procedures to avoid being targeted for investigation and prosecution.

Prior Law Assured Secrecy

Under prior law, regardless of the nature of the criminal activity under investigation, the general rule of absolute secrecy of grand jury proceedings never prohibited a subpoenaed witness from freely disclosing to anyone, including the target of the investigation; the information or documents produced to the grand jury or, certainly, to reveal in detail the testimony he or she gave before the grand jury.

The Right to Financial Privacy Act of 1978 not only preserved a bank's right to disclose and a customer's right to know, but also mandated that a bank notify a customer of the existence and contents of a subpoena and provide a record of documents produced to the grand jury. A customer could then, if appropriate, challenge the subpoena in court before the bank's production of the documents.

It was not unusual in the past for banks – although contrary to law – to accede to a prosecutor's request to delay customer notification for an unspecified length of time. In 1986, however, Congress mandated that prosecutors seek prior judicial approval of delayed notice based on affidavits stating specifically the compelling investigatory need for a delay of not more than 90 days.

If successful, the prosecutor is required to forward to the bank the order together with the subpoena for records. The order assures a bank that a court has reviewed the prosecutor's request and puts it on clear notice that it may not notify the customer for 90 days or longer upon further order of the court.

A Significant Departure

The new S&L law carves out a significant exception to this notification procedure. It amends the Right to Financial Privacy Act and creates a new federal obstruction of criminal investigations offense.

'Banks need to rethink their subpoena compliance procedures to avoid being targeted for investigation and prosecution.'

Now, under threat of prosecution, a financial institution, its officers, directors, partners, employees, agents, and attorneys are prohibited from disclosing to the customer or other named individuals the existence or contents of a grand jury subpoena or information supplied in response to a subpoena issued in connection with an investigation relating to violations of banking laws or frauds.

It is particularly important that the thrift law does not require prosecutors who issue these subpoenas to obtain and forward to a bank a judicial "no notification" order. Furthermore, neither the rules promulgated by the banking agencies since the law's enactment nor Department of Justice guidelines direct prosecutors to alert a subpoenaed financial institution that the particular subpoena falls within the no-notification category.

To make the matter even more precarious for a bank, if the subpoena was issued in connection with an investigation of crimes other than the enumerated banking laws, absent a judicial order, banks presumably must continue to notify customers or be punished.

Banks Put in a Bind

Congress and the Department of Justice apparently have taken the patently unfair position that the newly enacted statutes give a bank sufficient notice and warning of their prohibition. Consequently, a bank is left to play a dangerous guessing game as to when its personnel must and must not notify its customers or reveal subpoenaed information to anyone other than the grand jurors or government agents. A miscalculation could lead to suspicion, investigation, or even prosecution.

True, the new obstruction law requires the government to prove in a felony case that the disclosure was made with a cor-

Chemical vs. Rumor Mill. Under a barrage of bad press fueled by analysts' reports about deteriorating real estate assets, Chemical Banking Corp. faced a new struggle last week: quashing rumors that it was being stalked by a Japanese bank. One analyst cited market talk that Sumitomo Bank Ltd. was making a bid, while another said that Mitsui Bank, acting as a white knight, would provide equity.

"Shipley hooted at the rumors," said a Chemical insider, speaking of the bank's chairman, Walter V. Shipley. "Some of us would love it, but he's resisted it. He could probably sell the bank every other week."

A Chemical spokesman denied that any merger or equity discussions are taking place.

* * *

Selling a Mosquito. The former Texas Commerce Bancshares chairman, Ben F. Love, sold all of his Chemical Class B shares recently but says it does not reflect a loss of confidence in the bank. Chemical issued the hybrid security to Texas Commerce shareholders when it acquired their company in May 1987. The Class B shares convert into Chemical common in 1992 and must be redeemed at a premium if Chemical is sold before then.

Mr. Love said the shares were an insignificant part of his Chemical holdings.

"What I had was a little dab, a mosquito in my portfolio," the retired Texas banker said. He noted that he does not like to hold a class of stock unless it is worth "well into the six figures."

Mr. Love said he maintains considerable holdings of Chemical common and Class C preferred. "I have an emotional interest, a working interest, and a financial interest" in Chemical, he said.

Robert D. Rieke, an analyst at Rauscher Pierce Refsnes, said Mr. Love probably took a loss on the shares for tax purposes. Mr. Love sold his remaining 9,000 shares in January at $2.75 a share. Their value at issuance was difficult to determine, Mr. Rieke said, because they were part of a complex package of securities Chemical issued to Texas Commerce shareholders.

Diners Takes to the Air. Citicorp Diners Club Inc. will unveil a "Corporate Club Reward" program later this month that offers a twist on traditional incentives. Points accumulated with each charge can be applied to 16 different frequent-flier and frequent-guest programs at hotels and on airlines.

"It lets people take points accrued on airline A and redeem them on airline B," said a source within the Chicago-based Citicorp unit. That should please employees whose companies require them to travel on specific airlines, he said.

The traditionally low-key Diners Club plans to market the program aggressively. The push will be part of a broader effort to give the card a higher profile.

"We gave birth to the charge card industry 40 years ago, but we haven't done a good job telling the world about it," the source said.

Sugaring the OREOs. Bankers are making progress at securitizing foreclosed real estate, known in regulatory language as "other real-estate owned" assets. The problem to date has been convincing investors that the underwater property will produce enough income to pay interest on the securities.

"The key is getting a creditworthy parent of a bank or thrift that will take the risk" of guaranteeing interest payments, said a partner at a Wall Street law firm that recently completed a private placement of securitized commercial OREO properties for a thrift. The lawyer, who asked for anonymity, said the transaction was evidently the first of its kind.

Banks are particularly eager to shed OREOs, those most costly of assets. The properties produce little income and are expensive to maintain. For example, banks must pay taxes and hire security guards. Sources said the Resolution Trust Corp. also is pursuing the securitization path.

* * *

Wall St. Woos Banks. The new definition of highly leveraged transactions led one investment bank this week to brief its merger and acquisition specialists on ways to persuade banks to continue doing deals. The memo offered suggestions on how investment bankers can convince senior lenders that proposed deals will evade the HLT category, according to a source who requested anonymity.

"The banks are a lot more conservative," the source said. "They're offering less senior, asking for more equity, and turning down a lot. We're trying to convince lenders they won't get into trouble with regulators."

Hesitation over funding highly leveraged transactions was highlighted again last week when NCNB Corp. told analysts that its leveraged portfolio almost tripled from its original estimates under the new regulatory definition. The North Carolina company said its HLTs represented 11.6% of all loans and 134.7% of total equity, mostly because of cable television loans. The company said it is looking to reduce its concentration in the cable sector.

* * *

Delay of Game. Pittsburgh-based Equimark Corp. was granted extra time by the Federal Reserve Board to complete its purchase of National Bancshares Corp. of San Antonio, Tex. The sale was to have closed March 31, but the target bank said it did not begin mailing a flood of information about the exchange offer to stockholders and bondholders until this week. The closing date is now May 23.

"We have a special shareholder meeting scheduled for April 26," said an NBC official. "If we don't get enough votes for approval, this gives us time to go out and get some more." ☐

Provision for U.S. Loan Puts Pressure on Standard

LONDON — A provision by **Standard Chartered** PLC against its $110 million exposure to a troubled U.S. computer company, **Miniscribe** Corp., will hurt the bank's efforts to strengthen its capital base and boost investor confidence, analysts said.

"This is another blow to Standard as it tries to emerge from its ashes," said Rod Barrett, an executive director at **Goldman Sachs** & Co. "It underlines the difficulty of international banking."

Standard Chartered earlier said it was making an $80 million provision against its exposure to Miniscribe, which filed for protection from creditors under Chapter 11 of the U.S. Bankruptcy Code after discovering a fraud.

Because of the provision, analysts have lowered their pretax profit forecasts to about $385 million, before exceptional charges, from an average of $465 million previously. In 1988 the bank posted earnings of $500 million.

In January, Standard said pretax profit would be below the previous year's level as a result of bad debts in Britain, corporate business problems in Australia, and the suspension of interest payments by Brazil.

Market sources said the bank's exposure to Australia's troubled corporate market was significant and could entail $160 million to $240 million in exposure to entrepreneur Alan Bond alone.

After years of concern about its weak asset base, a highly dispersed international management structure, and exposure to LDC debt, Standard has begun to implement a far-reaching restructuring program over the past year.

This plan included a new management team, the sale of $400 million of assets, and last December's link-up with **Westdeutsche Landesbank Girozentrale**, which enabled Standard to strengthen its capital ratios and raise LDC reserves.

"This comes at a very unfortunate time," said analyst Martin Green at the brokerage of **Smith New Court**. "There had been assurances that the bank's asset quality was improving."

WEST GERMANY

The Bundesbank said it lifted remaining restrictions on East German assets in West Germany, giving East German citizens full control over the disposition of funds in their private accounts and deposits at West German financial institutions, effective today.

In a statement, the Bundesbank said it was able to lift the restrictions because East Germany now allows its citizens to exercise full control over these accounts.

Previously, East German citizens could withdraw only 5,000 West German marks per person for each visit to West Germany.

— Reuters

EAST GERMANY

The East-West German currency commission favors converting East German savings at a one-for-one rate into West German marks when the two Germanies adopt monetary union, West German Economics Minister Helmut Hausmann said.

"We believe that we can't make the East German people worse off with their savings," he said in an interview.

Mr. Hausman declined to say what amounts were involved or what timing for the conversion was discussed at Tuesday's third meeting of the currency commission in East Berlin.

— Reuters

ARGENTINA

Economy Minister Antonio Erman Gonzalez has accepted the resignation, tendered last week, of Argentine central bank president Enrique Folcini, ministry officials said.

They could not say who would replace Mr. Folcini, the fourth central bank head to quit during the eight-month government of President Carlos Menem.

Mr. Folcini, who assumed the post on Jan. 22, resigned after a disagreement with other government officials when he used central bank funds to help two financially troubled banks.

— Reuters

SINGAPORE

Dresdner Bank AG will shift part of its private banking operations from Hong Kong to Singapore in April, a senior bank official said.

The decision to relocate was made on operational grounds, because it will be more convenient to serve Southeast Asia from Singapore than Hong Kong, he said.

Dresdner Bank operates a restricted bank in Singapore under the same name. The bank also has a merchant bank, Dresdner Southeast Asia.

— Reuters

HONG KONG

State-owned **China International Trust and Investment** Corp. issued 669.164 million covered warrants on **Hong Kong Telecommunications** Ltd. at 19.25 cents each, colead manager **Barclays de Zoete Wedd** said.

Barclays said the indicated premium range will be between 14% and 17%, against the current trading price. Hong Kong Telecommunications shares closed unchanged at $5.35 on Tuesday.

First City Looking to Mexico, Asia

Texas Bank Using Los Angeles Office as Springboard

By JAMES R. KRAUS

NEW YORK — First City Bancorporation of Texas Inc. has opened a Los Angeles representative office to conduct business with Mexico and Asia.

Robert S. Bucklin, senior vice president, has been named manager.

The Los Angeles office, set up last month, will help the bank expand ties with *maquiladoras*, or Mexican border factories, said Donald Van Stone, chairman and chief executive of First City Texas Austin.

"We want to be elsewhere on the border and are looking at some other situations as well," Mr. Van Stone said without elaborating.

First City already does a substantial business out of El Paso, McAllen, Austin, Houston, and San Antonio with Mexican plants along the Texas border.

According to Mr. Van Stone, the bank has some $25 million in outstanding direct loans to the border factories. *Maquiladora* lending is growing by 15% to 20% a year, he estimated.

The loans represent only a small part of First City's business with Mexican manufacturing plants. A far larger amount is lent to the plants indirectly through their U.S. parent companies and to plant managers residing in Texas, he said.

First City will also use its Los Angeles office to attract Asian investors and build business links to the Far East.

First City, a $14.1 billion-asset bank, has overseas offices in London, Hong Kong, Nassau, Singapore, and Tokyo.

The bank has been steadily building its trade finance activities and set up a joint trade and investment corporation with the Chinese government in May 1988.

Negotiations Under Way

In a further move to broaden its reach, First City is negotiating with Banque Arabe et Internationale d'Invetissement, Paris, to acquire the BAII Banking Corp., a New York State Article 12 investment company.

A spokesman for First City denied a report that an agreement has been reached with Banque Arabe. He declined to comment on First City's interest in acquiring the New York State investment company.

State-chartered investment companies, authorized under Article 12 of the New York State Banking Law, have limited banking powers and cannot accept deposits in New York State. □

LDC Debt Market Facing an Oversupply

Continued from *page* **1**

loan, and claim a tax deduction for an equivalent amount against future earnings.

Banks also buy Third World debt in the hope of profiting by selling it at a slightly lower discount than they paid for it. Because the debt is bought at a discount, banks do not have to set aside reserves for their purchases.

Trading volume on the secondary market reached about $40 billion last year, according to estimates by traders at U.S. banks.

Owners to Get Debt

Libra's loan book, totaling $2.4 billion and concentrated in the Latin nations, is to be sold to stockholders in proportion to the size of their stake in the bank. Chase Manhattan Corp. is Libra's biggest shareholder with 23.6% and therefore will have to take back about $500 million in LDC debt, sources said.

In London, a Chase Manhattan spokesman said that the bank has sufficient reserves to cover its share of exposure to Libra's debt. He said the 10 banks that own Libra decided to pull the plug because they had "a variety of different strategic requirements" for LDC debt.

"It was easier to wind up the bank," the Chase spokesman said.

Other owners are National Westminster Bank PLC, Royal Bank of Canada, Swiss Bank Corp., Westdeutsche Landesbank Girozentrale, Mitsubishi Bank Ltd., Bancomer, Banco Itau, Credito Italiano, and Banco Espirito Santo e Comercial de Lisboa.

The closing, involving layoffs of 160 people in Britain, will take place by yearend. All its creditors will be repaid in full, according to executive director Carlos Santistevan.

Volume Topped $11 Billion

Libra posted a turnover in LDC debt transactions last year of $11.5 billion, according to a recent survey by *LDC Debt Report*, an *American Banker* publication. This gave it third ranking among the banks most active in debt trading, after J.P. Morgan & Co., with trading volume of $14 billion, and NMB Bank, with $13.6 billion.

While prices for LDC debt in Europe have so far been only slightly affected by news of Libra's impending closure, other specialist trading firms agreed that that the move threatened the secondary value of Latin American loans.

Trading volume in Latin LDC loans and related activity such as debt-equity swaps is estimated to have totaled $80 billion in 1989, up substantially from $60 billion in 1988.

Activities Have Shifted

Libra was originally established by its owners as a specialist Latin American lending and trade-finance bank. However, its activities contracted sharply after Mexico sparked the continent's debt crisis in 1982 and, in recent years, the bank has largely specialized in debt trading.

Libra recorded a loss of $287 million in 1989 after making loan-loss provisions of $315 million for LDC lending. This brought its total cover to 32%, still well behind the average 50% recommended by the Bank of England in its matrix guidelines for British banks.

Meanwhile, up to five banks, including Manufacturers Hanover Trust Co., are reported to be bidding to recruit Libra's 10-strong debt trading team, regarded as a highly experienced group of personnel, to promote their own LDC debt activities.

James R. Kraus in New York contributed to this article.

Salomon Analyst Expects Souring Campeau Loans to Be Reclassified

A number of major banks are expected to put their loans to Campeau Corp. on a nonaccrual basis in the first quarter, contributing to a surge in nonperforming HLT (highly leveraged transaction) loans, according to Thomas Hanley, a banking industry analyst at Salomon Brothers.

Banks also are reporting more HLT debt outstanding as a result of a new federal definition of highly leveraged transactions.

At a few banks, the ratio of nonperforming HLT loans to total HLT debt probably will be at or near double-digit levels at the end of the first quarter, according to a report just released by Mr. Hanley. He was referring only to senior debt on leveraged transactions.

No Campeau Debt on Books

Bankers Trust is already close to the double-digit level. The subsidiary of Bankers Trust New York Corp. has $3.4 billion of senior HLT debt outstanding, and nonperforming HLT loans represent 9.1% of that amount.

A Bankers Trust spokesman comfirmed Mr. Hanley's numbers but said that two transactions account for more than half of its nonperforming HLT loans. He added that the bank has no Campeau debt on its books.

The bank's total portfolio of senior HLT debt consists of 193 loans in 42 different industries, making it "pretty diversified," the Bankers Trust spokesman added.

Still, of the 15 big commercial banks studied by Mr. Hanley, he said Bankers Trust has the highest ratio of nonperforming HLT loans, followed by First Bank System at 6.9%, BankAmerica Corp. at 5.7%, and Citicorp at 5.2%.

In dollar terms, Citicorp has the biggest HLT loan exposure, with $7.9 billion of senior HLT loans outstanding, based on the new definition of HLT's, according to Mr. Hanley.

For the group of 15 banks as a whole, Mr. Hanley said, he would not be surprised to see the ratio of nonperforming HLT loans reach double-digit levels – perhaps even as high as 15% – within the next 18 months. And that assumes the economy remains relatively healthy.

Problem Termed 'Manageable'

If the nation sinks into a recession, "the numbers could be worse," Mr. Hanley said.

He expects loan losses on 10% of the HLT debt placed on nonperforming status, he said. "There, we have a more temperate outlook."

Right now, Mr. Hanley doesn't think the HLT debt situation has the makings of another Third World debt crisis, though it's a "little too early to judge that," he said.

"We think the whole thing is basically manageable at this point," the Salomon Brothers analyst added.

At Bankers Trust, the spokesman said, "It's a business we remain committed to."

Rhone-Poulenc Expected To Choose Four Lenders

Four banks are expected to win a mandate this week to provide Rhone-Poulenc S.A., the French state-controlled chemicals and pharmaceuticals giant, with the $1.6 billion in financing it needs to complete its planned $3.15 billion merger with U.S.-based Rorer Group.

The banks committed to providing the financing are Societe Generale, Barclays Bank PLC, Chase Manhattan Bank, and the Royal Bank of Canada. Officials at the four banks declined to comment except to say that they expected to be given the mandate Tuesday night. It could not be determined exactly how much each bank had committed to the $1.6 billion facility, but it was not divided equally.

The details for the syndication of the loan will be ironed out this week, and officials involved estimated the deal could be in the market within a week.

While the bank debts of some chemicals companies have received a spotty reception among investors because of their cyclical nature, this transaction is not expected to be viewed in the same light.

"It's a long way from being a highly leveraged transaction in style, and it's a reasonably well-diversified company," one bank official said. "This is no small company."

For instance, in the first nine months of last year, Rhone-Poulenc had over $9.3 billion in consolidated sales.

The merger creates a new company to be called Rhone-Poulenc Rorer Inc. Sources familiar with the deal said that since Rhone-Poulenc would be guarantor, it would carry the debt as a contingent risk on its books.

Under the structure of the deal, Rorer shareholders would receive $78 a share in cash for half of their holdings, and stock rights and equity in the new company for the other half. Both companies have valued the package at $73 a share. The tender offer for cash, which would give Rhone-Poulenc 50.1% of Rorer's shares, begins this Friday. After the deal is completed, Rhone-Poulenc will own 68% of the new company.

Hanover Reports 24% Dip In Loan Syndication Fees

Manufacturers Hanover Corp. said loan syndication fees dropped 24% last year, to $112 million from $147 million in 1988, reflecting a decline in the volume and size of leveraged buyout deals.

The bank attributed the slowdown in LBO activity to its "continuing stringent credit criteria for these types of transactions."

Fees for highly leveraged transaction loans totaled $117 million in 1989, the bank also said in its 1989 annual report.

At yearend 1989, Manufacturers Hanover's total HLT loan portfolio stood at $3 billion, representing 8% of total loans and 5% of total assets, the bank said.

HLT loans on nonaccrual status at Dec. 31, 1989, totaled $47 million, Manufacturers Hanover said.

ANNOUNCING
"BANK PRODUCTIVITY IN THE 1990S"
A SURVEY OF SELECTED BANKS

Andersen Consulting is pleased to announce the availability of a new study, *"Bank Productivity In The 1990s"*. The study explores the environmental, strategic and human resource issues banks are likely to face throughout this decade.

Prepared in conjunction with Arthur Andersen, the audit and tax firm of The Arthur Andersen Worldwide Organization, the study is based upon survey data received from representatives of 73 regional banks. The participants were top executives of banks with assets ranging from $2 billion to $44 billion, and employing 3,000 to 14,000 people.

The survey was designed to collect information about productivity within retail, corporate and middle-market lending institutions, with emphasis on the administration, operations and trust functions.

To find out more about this and other studies available through Andersen Consulting, please contact:

Some Top Banks See Big Profits In Junk Bonds

By DAVID NEUSTADT

NEW YORK — Call them contrarians, but officials at First Chicago Corp. think the depressed junk-bond market actually offers great profit opportunities.

This week, the big Midwest bank announced it had hired a Wall Street veteran to lead trading and dealing in the high-yield securities market. First Chicago said it believes it can limit its risk and position itself for better times in the devastated market.

"A market that is disorderly, with people leaving and people coming, is a decent market for traders, if you are savvy," said Geoffrey L. Stringer, corporate senior vice president. "We will have limited exposure. To trade, you don't have to take a large position or hold big inventories."

ANALYSIS: *Follow-up on the news*

Owen J. Cheevers – a former managing director at the Merrill Lynch Pierce Fenner & Smith brokerage unit of Merrill Lynch & Co. – was hired Monday to be managing director in charge of developing First Chicago's strategy for entering the high-yield business.

Others Pounce, Too

First Chicago is just the latest of several commercial banks to see opportunities in the junk market. Bankers Trust New York Corp., J.P. Morgan & Co. and Citicorp already have high-yield units that are trading bonds. Almost all hope to underwrite new issues when the market recovers.

Other banks see junk, especially at its currently depressed prices, as a good investment.

"The long-term competitive dynamics are in our favor," one banker argued. Several of the big investment banks are responsible for deals that have gone bad. "That creates some ready acceptance for someone else to do new, high quality business," he said.

Regulator Sees Positives

At least one regulator said he thinks banks could make a positive contribution to the market. "Banks could bring some stability to the market, in part because of their exposure to securitization," said an official at the Office of the Comptroller of the Currency. "They could bring newer structures and some credit enhancement."

Banks lend to the same kinds of companies that tap the junk bond market, the official said.

Disputes Stall Fraud Trials, Panel Told

By AMY SUZANNE KING

WASHINGTON — Conflicts between federal criminal investigators and lawyers seeking to recover failed thrifts' assets are delaying prosecutions of fraud at those institutions, a U.S. attorney said Wednesday in congressional testimony.

The disputes – involving Justice Department officials and attorneys working for the Federal Deposit Insurance Corp. and the Resolution Trust Corp. – are slowing disclosures of documents that law enforcement officials need to bring criminal charges, Jerome Arnold, the U.S. attorney for Minnesota, told a House Government Operations subcommittee.

Efforts to obtain documentation and records of conversations needed in criminal prosecutions have consumed an inordinate amount of time and money because the FDIC and RTC lawyers are reluctant to part with the information.

Fear on Asset Restitution

The lawyers, often independent attorneys under contract to those agencies, invoke attorney-client privilege to withhold documents out of fear that they will

House Members Cite Concerns on Bailout

By ROBERT M. GARSSON

WASHINGTON — Even though the passage of a new savings and loan bill is not expected this year, legislators and regulators began laying the groundwork for such a measure Wednesday.

Members of a House Banking subcommittee raised concerns about the slow pace of dealing with insolvent institutions, the impact of new lending rules on home construction, and public disputes between different agencies over how to proceed on the bailout.

Attacking Golden Parachutes

Meanwhile, bills were introduced that would abolish the Office of Thrift Supervision and give the Federal Deposit Insurance Corp. the authority to block executives of failed thrifts from receiving lavish severance packages.

The concerns raised are likely to form the basis for legislation that would amend last year's massive thrift bailout. Such a bill is widely expected, but considered unlikely this year because of opposition by members of the Senate Banking Committee.

Some of the developments on Capitol Hill suggested that the next bill could spell the end of an independent thrift industry.

For example, Rep. Jim Leach, R-Iowa, won support from state and federal regulators for a bill he introduced late Tuesday afternoon that would abolish the Office of Thrift Supervision and transfer its duties to the three federal banking agencies.

Support Is Broad

Mr. Leach said the supporting comments, from the Federal Deposit Insurance Corp., the Conference of State Bank Supervisors and the American Council of State Savings Supervisors, should give his proposal a boost next year.

See **HOUSE** page 11

Rethinking the Bailout

Bills before Congress would:

- ☑ Abolish the Office of Thrift Supervision.
- ☑ Abolish the Resolution Trust Corp. Oversight Board.
- ☑ Authorize the FDIC to cancel lavish severance packages for executives of failed institutions.
- ☑ Prohibit insured institutions from selling at branches debt issued by affiliates.

Profits in Texas S&L Deals Only Average

By STEVE KLINKERMAN

DALLAS — Maybe M. Danny Wall didn't give away the store after all.

Despite widespread criticism of the regulator's fire sale of insolvent Texas thrifts in 1988, a review of the deals indicates that the government is better off for having done them.

While two of the 15 deals have produced extraordinary returns for investors so far, the majority are yielding only reasonable profits. In fact, it appears that most acquirers are getting too small a return for the risks they incurred.

And, by stemming the losses at the failed thrifts nine months before the bailout law was passed, the government curbed its losses and helped stabilize the Southwest financial industry. Equally important, experts said, assets were moved from government ownership into private hands.

To be sure, the deals engineered by Mr. Wall are still open to criticism. And part of the reason why the transactions are looking better from the government's point of view is that key elements have since been changed. But results for the first nine months of 1989 show that the so-called Southwest plan was far from the across-the-board giveaway that it has been portrayed as.

Criticism over the government's plan for dealing with failed savings associations in the Southwest – under which 79 insolvent thrifts were merged into 15 institutions and sold to investors – is among the factors that prompted Mr. Wall to resign as the nation's top thrift regulator.

Mr. Wall pushed through the rescues while pre-

COMMENT/ By Jonathan Leader

CMOs Offer Big Rewards For Small Portfolio Risk

With loan demand declining, banks and thrifts are focusing more attention on their investment portfolios to earn profits.

But what to do? The yield curve is flat, and interest rates are at the low end of their five-year range. In this environment, how can a financial institution generate a healthy spread over its cost of funds without incurring a lot of risk?

Fortunately, there just may be a free lunch.

Yields Exceed Treasuries'

Derivative mortgage securities, known as collateralized mortgage obligations, offer yields well in excess of Treasuries, extremely high credit quality, and low price volatility. In many cases, CMOs can be used to generate yields of 75 to 125 basis points more than those of Treasury securities.

CMOs are big business. More than $330 billion worth are outstanding, and new issues arrive at a rate of more than $10 billion a month.

More than 90% of CMOs are collateralized by mortgages guaranteed by the Government National Mortgage Association, Federal National Mortgage Association, or Federal Home Loan Mortgage Corp. More than 70% of CMOs are bought by financial institutions, and most are in the second-lowest risk-adjusted capital category (20%) for banks and thrifts.

What is a CMO? It's a multiclass bond issue collateralized by fixed-rate mortgage pass-through securities. The cash flows of the underlying mortgages are used to make principal and interest payments.

Difference in Payments

The key difference between a Ginnie Mae pass-through and a CMO is in the distribution of principal payments. With a conventional pass-through, the interest and principal payments received each month from mortgage holders are passed through to all security holders on a pro rata basis.

The CMO structure substitutes sequential retirement of bonds for the pro rata return of principal found in the pass-through. Thus, mortgage-backed securities carry short-, intermediate-, and long-term maturities.

Typically, the first class of CMO bonds gets all principal generated by the issue until it is retired, then the second class begins to receive principal, and so on.

CMOs have opened the mortgage markets to many investors who might otherwise be excluded by the longer maturities of standard pass-through securities. The typical CMO structure does not eliminate the prepayment uncertainty that has long been associated with mortgage collateral. CMOs do, however, offer a degree of prepayment protection not found in regular pass-throughs.

> **'CMOs can be used to generate yields of 75 to 125 basis points more than those of Treasury securities.'**

Like other mortgage securities, CMOs are priced to yield a spread over Treasury securities of comparable maturity, that is, over a Treasury security with a maturity approximating the CMO bond's average life.

Asset-Liability Matching

Recent innovations in the structure of CMOs have led to the creation of classes especially attractive for financial institutions that are concerned with matching assets against liabilities.

In particular, floating-rate CMOs have coupons that reset either monthly or quarterly according to a formula based on the London interbank offered rate. A typical floater, for example, may have a coupon that resets at a spread of Libor plus 70 basis points. Because Libor averages about 100 basis points higher than Treasury bills, floating-rate CMOs, in turn, have coupons about 170 basis points higher than these bills.

The monthly reset feature of floating-rate CMOs leads to very limited price risk, and the income flow from the securities moves in the same direction as short-term interest rates.

Variable-Rate CMOs

Floating-rate CMOs are a highly attractive variable-rate asset, making them an excellent match against variable-rate liabilities. As such, they offer a positive spread over a financial institution's cost of funds in both rising and falling interest rate environments. Floating-rate CMOs are eligible investments for all financial institutions.

Another category of CMO highly attractive for financial institutions is the PAC bond. These are fixed-coupon CMOs designed to maintain their average life regardless of interest rate movements.

For example, a typical two-year-average-life PAC bond will maintain its average life even if

THE LOBBYISTS/ By Barbara A. Rehm

U.S. League Sets Ambitious Agenda

The **U.S. League of Savings Institutions** has an 18-item list of lobbying goals for 1990 – clearly thinking big despite its diminished influence in Washington.

The league's top officials compiled the list early this month and picked four items as priorities. But the underlying objective is to make a thrift charter a more attractive investment. Mr. Levy figures the more capital that thrifts can attract, the less Uncle Sam will have to spend on bailing out the industry.

"We carry the baggage of a huge problem and a huge bill that was presented to the American people," acknowledges **Gerald J. Levy**, chairman of the league's Federal Affairs Policy Committee and chairman of **Guaranty Bank for Savings**, Milwaukee. "But tarnished image or not, what we are trying to do here is reduce the total cost [of the bailout]."

Gerald Levy

The league's top priority is accelerating the equalization of deposit insurance premiums paid to the government by banks and thrifts. Under the thrift-bailout law, banks and thrifts ultimately will pay 15 cents for every $100 in deposits. However, until that parity arrives in 1998, S&Ls will pay more than banks. Next year, thrifts will pay 23 cents to the banks' 15 cents.

"With thrift powers more constrained than banks' and regulation at least as stringent as banks', why would anyone invest in a [thrift] when it has to pay more for deposit insurance than a commercial bank?" asks the league's lobbying material.

Easing the qualified thrift lender test is another target. The association says the July 1991 requirement that thrifts keep 70% of their assets in home finance will lead to an unhealthy concentration of thrift assets.

The league is also lobbying to ensure that the $13 billion thrifts have locked up in the Federal Home Loan Bank System is not spent for any more of the bailout. The Home Loan banks are already contributing $300 million a year, and there is talk of tapping the system to supply working capital for the **Resolution Trust Corp.**

Other priorities of the league are defeating an expected rule from the Office of Thrift Supervision that would restrict dividend payments by thrifts, fighting a merger of bank and thrift regulatory agencies, and allowing a thrift to lend more of its capital to one borrower. The lending cap is now 15% of capital.

Mr. Levy concedes that Congress is not likely to pass a thrift bill this year because lawmakers are burned out on the topic and would just as soon ignore the controversial bailout during an election year.

"We're not Pollyannaish," he says. "We're just trying to get prepared."

* * *

S&L Execs Feel Lack Of Clout, Survey Says

Despite the U.S. League's ambitious goals, nearly three of every four savings and loan directors say the industry lacks a voice in Washington powerful enough to achieve them.

Hamilton & Staff, a polling company in Washington, surveyed 134 S&L directors across the country for the **Concorde Group Ltd.**, an Alexandria, Va.-based management firm that specializes in turning around troubled thrifts.

"The savings and loan crisis, and the need for strong governmental intervention that followed, has obviously created a negative climate for the industry and its traditional trade representatives in Washington," the Hamilton & Staff report said.

Frederick Webber

"The current reassessment of policies and procedures toward the industry is contributing to these directors' feelings of powerlessness in Washington."

James H. Grohl, a spokesman for the U.S. League, said the survey "doesn't square with any information we have." League members have "demonstrated confidence in trade associations as a vehicle for communicating with Congress and other bodies in Washington."

League president **Frederick Webber** has been criticized by his predecessor, **William B. O'Connell**, for not battling hard enough on the industry's behalf. But after Mr. O'Connell leveled that charge in January, several thrift executives active in the association came to Mr. Webber's defense.

— **Phil Roosevelt**

New Group to Press For Insurance Powers

Insurance may be the most sought-after banking power of the 1990s. The **Financial Institutions Insurance Association**, a trade group dedicated to bringing the insurance and banking industries together, is forming a group to help state banking associations lobby their legislatures for greater access to insurance markets. The San Francisco-based group has about 85 members split between financial institutions and insurance-related companies, according to its president, **James M. Shelton**.

The State Legislative Council will hold its first meeting on April 23 in Chicago.

The council will act as a clearing house for information about various state efforts to get insurance powers, according to **Dick Starr**, the association's chairman and president and the chief executive of **UST Securities Inc.**, Los Angeles. The group will supply advocates with rebuttals to likely arguments by the state insurance lobby, he says.

Mr. Starr figures that more participants in a market mean more competition and lower prices for consumers. Lawmakers in Delaware, Florida, Illinois, Indiana, Maryland, Massachusetts, and Virginia are expected to vote on some sort of insurance legislation this year.☐

siding over an insolvent insurance fund. To the outrage of Congress, he financed the transactions by issuing notes that became government obligations and rushed some deals to capitalize on tax breaks set to expire.

To attract investors, he relaxed capital guidelines, divvied up at least $1.8 billion of tax breaks, and left the government liable to pay acquirers up to $8.4 billion if earnings on distressed assets did meet prescribed levels.

Mr. Wall consistently underestimated the ultimate cost of the Southwest plan – pegged at $33 billion by the General Accounting Office – and was accused by Rep. Henry Gonzalez, chairman of the House Banking Committee, of offering deals so sweet that they could be likened to "golden mansions."

Hearings Set for April

Congress has ordered the Resolution Trust Corp. to audit the 15 rescues, along with 81 other deals completed by the Federal Home Loan Bank Board in 1988. And Mr. Gonzalez will conduct hearings on the Southwest plan in April.

Of the 15 transactions, two are providing rich returns for their owners, according to data compiled by Ferguson & Co. Blue Bonnet Savings Bank had an annualized return on equity of 72%. First Gibraltar Bank, bought by an investment group whose head is Ronald O. Perelman, posted a 60% return.

But eight thrifts had annualized returns in the range of 17% to 31%, which experts consider reasonable. Three thrifts reported returns of less than 3%. And two thrifts lost money.

'Where Is The Gold?'

"If the Southwest plan is a gold mine, where is the gold?" said George Barclay, president of the Federal Home Loan Bank of Dallas. "To the extent that earnings are not impressive, the government got a good deal."

More important, experts say, the rescues stopped the bleeding in Texas.

Together, the 79 insolvent thrifts involved in the transactions lost $3.6 billion in 1987 and $4.3 billion before their rescues in 1988. By contrast, the 15 merged survivors recorded $103 million of profits during the first nine months of 1989, Ferguson found.

Buyers have made progress in streamlining, stabilizing, and strengthening the 15 institutions.

The Best Possible Deals?

The 15 thrifts together shed $5.9 billion of risky assets during the nine-month period. They increased tangible capital by 30%, to $528 million. And they halved their use of costly brokered deposits.

"That's a lot better than doing nothing, even though the Southwest plan rescues obviously weren't the best possible deals," said Paul Horvitz, a professor of banking and finance at the University of Houston.

Some experts support the Southwest plan because it placed $47 billion of assets under the control of private owners, who can make decisions far more rapidly than can government bureaucracies. "The quicker the government places assets in the hands of private investors, the better," said Henry Peltz, a vice president at Keefe, Bruyette & Woods, New York, a consulting firm for the financial industry.

'The Returns Will Normalize'

Still, returns of the magnitude reported at First Gibraltar apparently will perpetuate the controversy surrounding the Southwest plan. "It's confirmation of the fact that Danny Wall gave away the candy store in 1988," said Bert Ely, the thrift consultant who for years has been an outspoken critic of the Bank Board.

First Gibraltar's chairman and chief executive, Gerald J. Ford, argues that the healthy returns guaranteed by federal assistance payments during the early years were designed to compensate investors for risks they took by investing in Southwest plan transactions.

"To defray the uncertainty, people will tend to build in cushions" of profitability, Mr. Ford said. "To the extent that the cushion was not needed, there might be, in the short term, some seemingly high returns. But over a three- to five-year period, the returns will normalize."

'Our Deal Got Changed'

Experts argue that hefty profits are the only inducement for investors to sink funds into the volatile thrift industry – especially when regulators and Congress appear willing, if not eager, to break contracts.

"It is not immoral that investors earn a big return when their capital is at risk," said one bank and thrift consultant, William Ferguson, principal of Ferguson & Co.

Some Southwest plan acquirers say they face even larger risks than they thought, because the government has subsequently eliminated some of the benefits in the transactions.

"Our deal got changed," said Matt Landry Jr., president and chief operating officer of AmWest Savings,Bryan, Tex. Because of a recent OTS decision to break Bank Board promises of low capital requirements, the investment required to sustain his $4 billion-asset thrift has tripled, meaning that each dollar of investment earns only a third of what it did before.

For that reason, Mr. Landry does not expect AmWest to sustain the 23% annualized return on equity posted during the first nine months of 1989.

A Scramble to Raise Capital

A similar situation exists at Dallas-based American Federal Bank. The thrift has abandoned growth plans and is scrambling to raise $50 million of additional capital by yearend.

William Gibson, the thrift's chairman, recently resigned. And Lone Star Technologies, the thrift's parent company, has been sued by shareholders who contend that they were misled about the potential profitability of its investment in American Federal.

Against this backdrop, experts say, it appears that most Southwest plan acquirers are getting too small of a return for the risks they incurred in doing business with the government.

The thrift law reduced the amount of assets that could be held with each dollar of invested capital, reducing investors' returns. And after government-subsidized assets are sold, Southwest plan owners will need to wring profits from institutions whose lending powers have been substantially restricted.

"Few Southwest plan investors would have done their deals if they had known of all of the regulatory changes," said Mr. Ferguson, whose firm negotiated several of the transactions.

Experts say the one big Southwest plan transaction that apparently has failed bears out the argument that healthy federal guarantees are necessary to attract capital and ensure a deal's success.

Prescription for Disaster

When it allowed ailing Southwest Savings Association to acquire four other insolvent Texas thrifts, the Bank Board extended assistance only on the assets Southwest acquired, not on its own distressed portfolio. Southwest, on the other hand, raised no additional capital in the takeover.

It was a prescription for disaster. Southwest lost $122 million during the 12 months that ended Sept. 30 and saw its tangible capital sink from a negative 1.65% to a negative 4.08%. The institution at Sept. 30 fell $329 million short of the tangible capital holdings required under the thrift reform law.

"It suggests that the deal wasn't sweet enough," said Mr. Horvitz. "The Bank Board should have provided more assistance and insisted on a substantial capital injection." ☐

In Unusual Case, Troubled Sunbelt Seeks No Buyer

By STEVE KLINKERMAN

DALLAS — Call it a rescue in process. Or perhaps the rescue that never was.

In any case, call Dallas-based Sunbelt Savings a federally owned thrift that 20 months after its formation is not even seeking a buyer.

Technically, Sunbelt's is one of the 16 rescues completed under the Southwest plan, but it is the only one of the thrifts still operated by the government.

The $9.5 billion-asset company was formed in August 1988 through the merger of eight insolvent northern Texas thrifts. Lacking cash to pay off depositors, the Federal Home Loan Bank Board pledged $11.5 billion of assistance to the thrift and put Thomas Wageman in charge of welding the pieces together.

Though Mr. Wageman has made progress, Sunbelt remains the great oddity among the Bank Board's 1988 transactions. The institution has virtually no earnings or capital, funds less than half of its assets with deposits – and is not for sale.

"A number of things occurred that forestalled the completion of the transaction," said Mr. Wageman, who is president and chief executive of Sunbelt.

Rescue Operations Stopped

The Bank Board halted its rescue operations when thrift reform proposals was introduced in early 1989, Mr. Wageman said, and the completed law placed Sunbelt under the Federal Deposit Insurance Corp., which has not taken action on the company.

Industry sources speculate that Sunbelt will stay in limbo for quite a while. It is not clear whether the Bank Board's assistance guarantees to Sunbelt can be transferred intact to a buyer. And regulators hardly have time to negotiate a second Sunbelt rescue from scratch, given the 320 broke thrifts already under their control.

In that light, sources said, Sunbelt's apparent fate is to remain a federally subsidized asset disposition unit funded by advances from the Federal Home Loan Bank of Dallas and deposits. Mr. Wageman said Sunbelt sold $450 million of assets in 1989 and hopes to boost total sales to $1 billion in 1990.

Sources say the thrift got about $700 million of cash assistance from the government during the 12 months ended Sept. 30. ☐

Fortune's Debt, CDs Downgraded by S&P

Reuters

NEW YORK — Standard & Poor's Corp. said it downgraded about $24 million in subordinated debt of Fortune Financial Group Inc. to B-minus from B-plus.

It also cut the rating on certificates of deposit issued by a unit of the company, Fortune Savings Bank, to BB-minus/B from BB-plus/B.

S&P said the downgradings reflected declining trends in the company's profitability and asset quality. Partly mitigating these concerns, it said, are the Clearwater, Fla.-based thrift's strong retail franchise and adequate capitalization relative to its peers. ☐

CoreStates Deal Is Closed

PHILADELPHIA — CoreStates Financial Corp. announced the completion of its acquisition of First Pennsylvania Corp. CoreStates says it is now the largest banking organization in eastern Pennsylvania.

Terrence A. Larsen, chairman, said that over the next few months, the company will gradually concentrate its Philadelphia-based wholesale business in its Philadelphia National Bank and its retail business in First Pennsylvania. ☐

Columbia Plan To Sell Its Junk Is a Big Gamble

By SAM ZUCKERMAN

SAN FRANCISCO — Columbia Savings and Loan Association's move to sell its entire $3.5 billion junk bond portfolio is a high-stakes gamble aimed at preserving the troubled thrift's capital so it can stay in business.

Analysts say the Beverly Hills, Calif.-based association, which has assets of $9 billion, has little choice but to try the maneuver. But they doubt Columbia can pull it off.

"This is the first step toward Columbia's demise," said Jay H. Lustig, director of junk bond trading at Drake Capital Securities Inc., Los Angeles. "I can't imagine the regulators not taking them over within a very short time."

ANALYSIS: *Follow-up on the news*

In a meeting with reporters on Wednesday, Edward G. Harshfield, Columbia's new president and chief executive officer, said the junk bond holdings would be sold through a "complete lift-out," meaning the portfolio would be sold as a single block.

Previously, Columbia said it would create a separately capitalized unit headed by former chief executive officer Thomas Spiegel to acquire its junk bonds. Mr. Harshfield's announcement of the sale of the entire portfolio is a variation on the original plan and does not represent an abandonment of the intent to find investors for a separately structured organization that would buy the bonds, sources familiar with Columbia's strategy said.

"A lot of people misunderstood what [Mr.] Harshfield said," one source commented. "This is not a divestiture, fire-sale strategy to just sell $3.5 billion worth of junk bonds to the market in one block. The idea is to structure a transaction in which equity investors would put up a small amount of money."

Two aspects of the plan have changed. Mr. Spiegel will not head any organization that buys Columbia's junk holdings in order to avoid a conflict with his role as an adviser to the thrift on the sale side of the transaction, Mr. Harshfield said.

Columbia is now prepared to partly finance the purchase by taking notes, described as "take-back paper," from the buying organization. Investors would be expected to put up $350 million to $500 million in equity capital, while Columbia would finance debt of about $3 billion.

Columbia hired First Boston

Banc One Shows Best Return On Assets of a Big Company

By GORDON MATTHEWS

NEW YORK — For the fourth consecutive year, Banc One Corp., Columbus, made more money on its assets than any other giant banking company in the nation. Its return on assets was 1.42%, down 3 basis points from the 1988 level.

The findings, based on the *American Banker's* annual performance study of large banking companies, showed that Wells Fargo & Co., San Francisco, jumped to second place among a group of 37 money-center and superregional banking companies by returning 1.26% on assets. The return was up 12 basis points from the 1988 level, when it ranked sixth in the group. Wells displaced Fleet/Norstar Financial Group, which slipped a notch to third.

Michigan National on Top

When the list of large banks is expanded to include the next 20 largest regionals, Michigan National Corp., Farmington Hills, outperformed even Banc One, with a return on assets of 1.69%.

AARP Said To Consider Eliminating Credit Union

By ROBERT TRIGAUX

WASHINGTON — Industry sources said Thursday that the American Association of Retired Persons may close its two-year-old credit union, which many bankers had feared would grow to be a formidable competitor.

The credit union opened in May 1988 with great fanfare. By drawing on the association's 30 million members, the institution was expected to quickly become the largest credit union and an aggressive marketer of consumer financial services nationwide.

However, growth has been slower than expected. In addition, the AARP Federal Credit Union has come under fire from its peers, who see its untraditional makeup as a political liability in their fight to preserve credit unions' tax advantages. Those two factors have prompted the association to consider pulling the plug on the institution, the sources said.

Robert DeFillippo, a spokes-

ABA Welcomes Changes in Bill On Laundering

By ROBERT M. GARSSON

WASHINGTON — As the House Banking Committee prepares to vote Tuesday on money-laundering legislation, key elements appear to have been made more palatable to the banking industry.

The draft legislation, which incorporates pieces of four separate bills, would still require banks for the first time to keep records of wire transfers. And the working version takes the broadest proposed approach, including both domestic and international funds transfers.

However, representatives of the American Bankers Association, reacting to early reports of the working draft, said the legislation appears less burdensome than expected, particularly because the Treasury Department is given a good deal of discretion in implementing the legislation.

"We're opposed to the record-keeping requirements" in the bill, said John J. Byrne, an ABA lobbyist. "But we're pleased there will be an opportunity to continue to deal with Treasury."

Philips Offers Computer Terminal To Compete with Citicorp Phone

By KAREN GULLO

NEW YORK — Philips International, the Netherlands-based computer company that is manufacturing a telephone-like home banking device for Citicorp, is broadening its U.S. marketing effort with a more sophisticated computer terminal that is used in millions of homes in Europe.

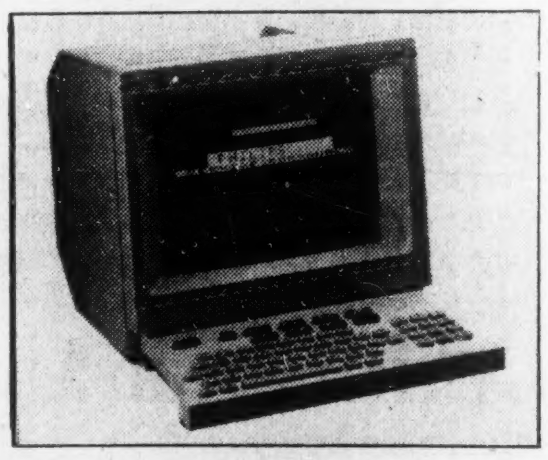
Philips believes the terminal will appeal to banks seeking to compete with Citicorp's recently launched home-banking service.

Both the Philips device, called the Minitel, and Citicorp's Enhanced Telephone are cheaper and easier to use than a personal computer.

A Full Keyboard

Citicorp's product, now being test-marketed in New York, is a telephone with a built-in video screen. The Minitel, which sits alongside about five million telephones in France, consists of a small video monitor and full keyboard.

"We saw in France that when two banks began offering a service, every other bank had to follow suit to compete," said Mark Stoner, president of Passport Telecom, Philips' U.S. marketing arm. "We have an existing product that we can offer banks so they don't have to spend millions in developing their own device."



HOME CONNECTION: Philips International's Minitel can deliver banking services.

Mr. Stoner said Philips wants to form joint marketing relationships with banks for home banking services. Philips would supply the Minitel terminals. They would cost consumers about $8 a month, but Philips expects that most banks will include the terminal in home-banking packages that might cost $15 a month.

Philips and Citicorp are pushing these alternative home-banking devices because ser-

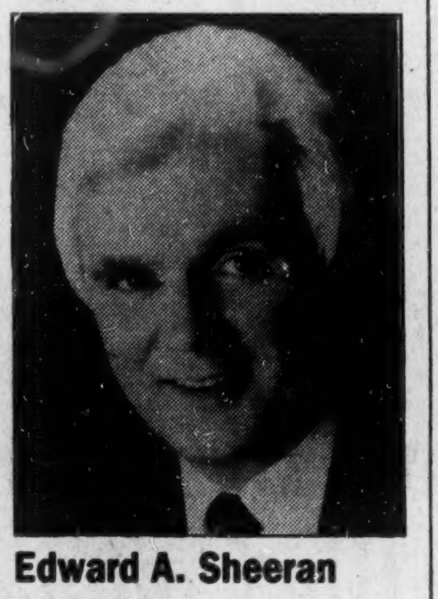
He's True Green with Pride: Banker to Lead the Parade

By ROBERT PAUL MOLAY

When Edward A. Sheeran, a vice president of Chase Manhattan Bank, leads the 229th St. Patrick's Day parade in New York on Saturday, he'll be making history.

It's not that he's the first banker to be so honored. Just two years ago, William J. Burke of the Bank of Ireland was elected grand marshal. Mr. Sheeran's selection breaks ground for another reason. "It's the first time in the history of the parade they've selected somebody from a major American company," he said.

His election is a change in focus for the parade, Mr. Sheeran said. "It's not just an Irish event – it's an American manifestation," he said. "The delegates wanted a change, somebody who was not political or controversial."



Edward A. Sheeran

Mr. Sheeran, 47, faced only the bleakest job prospects when he emigrated nearly 30 years ago from his parents' farm in County Roscommon, and he felt lucky to land a temporary job loading trucks.

"I came here from Ireland at age 18 and joined Chase the following year. Never in my wildest dreams did I think I would end up managing a piece of their business," he said.

Mr. Sheeran is now division executive for the metropolitan community bank of the Chase Manhattan Corp. subsidiary. His division comprises 22 branches in Queens, one of the five boroughs of New York City.

Managing a Chase Branch

Chase hired him in 1962 to assist branch tellers. By 1973, Mr. Sheeran was managing a new Chase branch in a heavily Irish neighborhood in the Bronx borough. "I really zeroed in on the Irish community," he recalled. "They liked relating to someone whose accent sounded familiar. The Irish of Kingsbridge gave me my big business break, and I will always be indebted to them."

Mr. Sheeran became an early proponent of the sales culture in banking. "Bankers in the '70s felt that all they had to do was sit behind a desk and take an order," he said. "Then, 'sales' and 'cross-selling' came as a culture shock to the industry."

Mr. Sheeran has spearheaded efforts of the Queens United Way, Junior Achievement, American Red Cross, Chamber of Commerce, and the American Cancer Society. He underwent surgery in 1986 to remove a cancerous tumor from his lung and said he enjoyed a speedy and complete recovery.

His Secret Revealed

"What's my secret? Being the chairman of an organization is the easiest job you can find. You don't do any of the work yourself. You must surround yourself with good people – just like running a business. If I start on the United Way, I don't take the chairmanship of another group. I usually give about one year to each project.

"My home life during the week is on a tight schedule. I'm often starting before 7 a.m. and still going at 10 or 11 p.m. But Saturday and Sunday are family days."

Of the parade, Mr. Sheeran said, "the excitement has been growing every moment. All of us have egos – and this is certainly satisfying my ego. The question is: How will I feel on March 18?" ☐

AARP Credit Union On the Rocks

Continued from *page* **1**

man for the credit union, acknowledged that the credit union has dropped one of the three services it offers and is reviewing whether to continue offering the other two. However, he declined to comment directly on whether the credit union was considering closing.

Since its start less than two years ago, the AARP credit union has managed to gather only $150 million in assets from 90,000 customers – a paltry figure, given the Washington-based association's huge membership of older Americans, said sources. In the last seven months, it has grown by only $30 million.

The credit union had been offering a savings account, a Visa credit card, and certificates of deposits. The savings account is being dropped because of lack of use, Mr. DeFillppo said. "We sent some letters at the beginning of the month to 50,000 credit union members announcing we would discontinue the services associated with the savings account," said Mr. DeFilippo.

Regulatory and other sources suggested the cutback by the credit union was largely economic and that the institution's two outside contractors might be anxious to end their relationships. Banc One Corp. of Columbus, Ohio, handles the processing for the AARP's Visa card, and Scudder, Stevens & Clark Inc., in New York, handles the credit union's investment portfolio.

Banc One spokesman John Russell acknowledged that AARP was reviewing its operations, but said the bank was still processing the credit union's Visa business on a normal routine. Scudder could not be reached for comment. ☐

Few Takeovers Seen in Wake Of Connecticut Banking Law

By TOM LEANDER

NEW YORK — Passage of a bill in Connecticut allowing interstate banking nationwide will not spark a rash of takeovers because of the state's distressed real estate market, analysts predicted Thursday.

"Given the asset-quality problems of many banks in the state, I question whether acquirers will want to pay any premium. The real estate market is too uncertain," said Donald Kauth, an analyst at First Albany Corp., an Albany, N.Y., brokerage.

Connecticut's House and Senate compromised late Wednesday and approved a bill allowing banks from states with reciprocal laws to buy or merge with Connecticut banks. The bill also bars the state's Department of Banking from chartering any new bank until February 1992.

Governor to Sign Bill

The bill now goes to Gov. William A. O'Neill, who has said he would sign it. It would take effect immediately. State law now allows banks only from the New England region to acquire banks in the state.

The Connecticut House and Senate clashed last week over when new banks should be allowed to open in the state. The House wanted to make it immediate, but the Senate favored a three-year moratorium to protect local bank charters.

Analysts said Thursday that the state, with 161 financial institutions, is already "fully banked." "We will probably see some of the New York money-center banks expand their franchise into Connecticut," said James E. Moynihan, an analyst for Advest in Boston.

Stock in the average commercial bank in the state is trading at 72% of book value, or 50% less than the 1987 peak, he said, and the average thrift in the state is trading at 55% of book value.

Takeover Candidate

Mr. Moynihan said Citytrust, a $2.6 billion-asset bank company in Bridgeport, is among attractive takeover candidates in the state. Citytrust has been hit hard by losses in its residential real estate portfolio. Its shares traded at $12.75 Thursday afternoon, up from $12 at Wednesday's close.

Passage of the legislation is immediate good news for two major Northeast banking companies, analysts said.

Fleet/Norstar Financial Group Inc. of Providence, R.I., will not now have to divest itself of United Bank & Trust Co., its Connecticut franchise. The state banking commissioner had ordered divestiture in early 1988, after Fleet merged with Norstar, which is based in Albany, outside New England.

And the Bank of New York Co. can complete its merger agreement with New Haven-based Northeast Bancorp. In late afternoon trading Thursday, Northeast Bancorp. was trading at $43 a share, up $3.75 from Wednesday's close. ☐

Correction

A chart published March 15 ("The Southwest Plan's Report Card," page 1) incorrectly stated the annualized return on equity for 79 rescued thrifts in the third quarter of 1989. The correct figure is 15.8%.

Keating Letter Invokes Wrath Of Gonzalez

By ROBERT M. GARSSON

WASHINGTON — House Banking Committee Chairman Henry B. Gonzalez said Thursday that a 1988 letter to Charles H. Keating Jr. from his lawyer shows that "the fix was in at the Federal Home Loan Bank Board" to protect Mr. Keating's Lincoln Savings Association from California regulators who wanted to close it.

In the letter, the lawyer, Margery Waxman, said she had pressured the nation's top thrift regulator into directing his staff to conclude an agreement "which will completely satisfy" Mr. Keating.

The letter, obtained by Mr. Gonzalez and released Thursday, was dated May 10, 1988. On the same day, Mr. Keating met with Bank Board Chairman M. Danny Wall to discuss Lincoln Savings and Loan Association, the Irvine,

COMMENT/*By Scott B. Schreiber*

Bank Hazard: Bad News Sparks Shareholder Suits

Bank holding companies that face the unfortunate prospect of announcing, as part of their quarterly financial results, either unusually large additions to their allowance for loan losses or other bad news are also likely to face the prospect of being sued for federal securities fraud.

Within the last several months, financial institutions in New England and the Southwest have been sued within a day of their press release announcing significant loan-loss provisions.

In virtually identical complaints, filed by the same group of lawyers, shareholders have sought to assert federal securities law claims against such institutions.

The law firm in question is one of several that have developed a specialty in filing shareholder class actions arising from such announcements.

Mismanagement Claim Avoided

Securities claims have been filed, rather than traditional derivative claims alleging mismanagement, to avoid making a demand on the defendant institution that it bring suit against the managers. Such a demand permits a panel of independent directors to exercise business judgment as to whether a lawsuit should be brought.

The new techniques used by law firms representing shareholders to bring such class actions should be understood by holding companies that may become defendants so they can respond effectively.

A decision to increase the reserve for loan losses that are reasonably foreseeable is, of course, closely watched by shareholders and bank regulators. Such decisions often have been supported by regulators and banking analysts.

Tardiness Charged

However, they have also prompted lawsuits essentially based on the proposition that these new estimates of future losses should have been recognized earlier in financial statements, public filings, and periodic announcements of earnings predictions.

The suits have further held that the estimates of increased losses were a result of inadequate lending policies and procedures and ineffective loan review. Seemingly based solely upon newspaper articles announcing the reserve addition, and resultant reduction of predicted quarterly earnings, certain well-known law firms have been quick to file class-action complaints.

As in the case of one pending action against a New England bank holding company, Amoskeag Bank Shares Inc., Manchester, N.H., the complaints uniformly have been brought not only against the holding company, but its officers and directors as well. The named plaintiff seeks to represent a class of all shareholders who purchased securities during a long period before the announcement of the addition to the reserves.

Lengthy Period

In the Amoskeag situation, this period is for more than two years. By filing a class action under Rule 23 of the Federal Rules of Civil Procedure, the named plaintiff and his law firm seek to increase greatly the economic power they have in connection with the litigation.

Ultimately, if there is a judgment after trial or a settlement, the law firm will be reimbursed for its expenses plus fees and the named plaintiff might receive an "incentive" award from the court.

To achieve most readily all of these objectives, however, the named plaintiff must first devise a method to get into federal court by alleging a claim based on federal law.

Many Charges

Accordingly, in these recent cases and most particularly regarding New England banks, plaintiffs have alleged that the previously published financial statements of the institution and its other public announcements were materially false and misleading, contained untrue statements, and omitted material facts in violation of Section 10(b) of the Securities and Exchange Act of 1934.

'To achieve its objectives, the named plaintiff must first devise a method to get into federal court.'

In reality, however, when the allegations have been parsed, they have had less to do with representations of specific facts and more with contentions by the shareholders that the management of the institution was not doing its job.

The allegations made in the Amoskeag case are instructive. Plaintiffs claimed that the institution's allowance for loan loss was understated as of previous dates, that the institution's lending policies and procedures were reported to be adequate and effective when in reality they were not, and that the credit decisions of the institution were not sound when the public had been reassured that there was a competent lending function.

Finally, it was alleged that general statements about expected earnings were inaccurate and were known to be inaccurate when made.

Criticism of Policies

These allegations, however, merely reflect criticism, with the benefit of hindsight, of the institution's loan and investment policies, and disappointment that the institutions' financial performance has declined, sometimes as a result of local economic adversities.

Recognizing that such contentions are nothing more than a shareholder disagreement with the institution's business decisions, courts in several parts of the country have indicated that the criticisms are garden-variety mismanagement claims that simply are not actionable under federal securities laws.

Certain complaints have been dismissed because they merely set forth conclusory allegations of wrongdoing or imprudent business practices that are not supported by any facts other than that the decline in the value of the plaintiff's stock as a result of the market's reaction to the addition to the allowance.

No Insurance Policy

In essence, these courts have found that complaining stockholders have been improperly seeking to transform the securities laws into a federal insurance policy guaranteeing against any loss in the securities markets.

Likewise, claims of inadequacy of the allowance for loan losses have been viewed by courts as condemning nothing more than a failure to predict the strength of the institution and the general economic conditions in the area where the institution transacts business.

Loan reserves are by definition allowances to cover estimated future losses on loan and

Keep on Truckin'

One of West Germany's banks is gearing up – literally – to truck its way into East Germany to offer banking services.

COMMERZBANK

R.J. Kaufman

Commerzbank AG, West Germany's third-largest bank, has outfitted 10 mobile trucks that can quickly be put into service as branches, according to Axel von Ruedorffer, a member of the managing board.

Mr. Ruedorffer said 1,300 West German employees of Commerzbank have volunteered to work in East Germany. Deutsche Bank AG, West Germany's biggest, also plans 10 branches in the East.

Your Car or Mine?

Traffic tie-ups in the San Francisco Bay Area have become so abominable that human resources executives at the Bank of America decided to take matters into their own hands.

Last week, Robert Beck, an executive vice president, and Cynthia Johnson, the employee transportation manager, organized a "commuter fair" at the bank's headquarters to publicize such solutions as flextime and ride sharing. The bank, Ms. Johnson says, is concerned because traffic jams heighten employee stress and bite into company time.

The bank recently set up a computer service that matches up employees in the same ZIP code as candidates for car pools.

"It sounds like computer dating," quipped Ms. Johnson, adding that the service has already matched up some compatible commuters.

Switcheroo

Employees in Manufacturers Hanover'sNew York headquarters should not have any problem remembering the address of the building where they work. Manny Hanny has switched the first three digits of its phone number from 286 to 270 – the number of its Park Avenue building.

Says a Manny Hanny spokesman, John Meyers, "It's recognizable to the employees. What better number to use?"

Mayday

Sometimes acronyms adopted by government agencies are inadvertently revealing. For example, government agencies traditionally issue RFPs, or request for proposals – a standard notice to businesses inviting bids on government contracts.

But the Resolution Trust Corp., the agency with the seemingly impossible job of selling billions in assets from failed S&Ls, has adopted a different name for its RFP.

The agency issues a solicitations of services – or SOS.

Haute Banking

When reporters start writing about what's hot in the couture world, they usually go to the designers. But in Paris, they can turn to a bank, too.

Banque Paribas is the main lender to the Japanese designer Kimijima, whose flashy Russian-inspired fall and winter styles – including brocaded boots edged with fur, ballooning satin cossack trousers, and chunky earrings and necklaces – are all the rage in Parisian fashion circles.

Writing about the designer's new line, United Press International reporter Aline Mosby decided to get a comment from the bank. "Kimijima started on this idea last fall," a Banque Paribas spokesman said. "We figured, well, the Americans surely would like it." ☐
